Video: ISA bus ET4000 graphics card with 1 Mb DRAM and NVDI ET4000 driver,
Resolutions: 640 x 480 x 16.7 Million Colours, 800 x 600 x 65K, 1024 x 768 x 256 and
1280 x 1024 x 16 colours.
(expandible to PCI bus ATI Mach 64 with up to 4 Mb VRAM.)

DirecT40 Processor data:

Processor: MC68040 33/66MHz

DirecT60 Processor data:

Processor: MC68060 60MHz
Processing Power: 120 MIPS

MIPS is Millions of Instructions per second and is used to
rate processing power and speed.

Internal ports:

4 PCI-bus slots
2 ISA-bus slots
1 VME-bus slot
1 EIDE (enhanced IDE) with max. 10MB/s for 2 devices
1 SCSI with max. 4MB/s for 1-7 devices (TT compatible)
1 floppy (DD/HD/ED) d.h. max 2.88MB

External ports:

Modem 1 (25 pin Dsub-connector) with max. 19,200 baud
Modem 2 (9 pin Dsub-connector) with max. 250,000 baud
Local talk (8 pin Mini Din) with max. 250,000 baud
Printer 25 pin Dsub (TT/Falcon-compatible)
Midi-In/Out
PC keyboard connector (standard)
mouse and joystick (Atari compatible)

Specs on the SuperMac C500 Mac OS clone..

Technical Specs

Upgradable Microprocessor

PowerPC 603e CPU card
Primary processor upgradeable with a
603e Socket Card
Built-in floating-point processor and
32K on-chip cache
40 MHz, 64-bit bus

Memory

16 MB RAM on motherboard, expandable to
144 MB
2 DIMM slots
DIMM memory modules should be
non-composite, 168-pin, 5 volt,
64-bit with 70 ns access time or faster.
Compatible with EDO or fast-page

DRAM.
256K Level 2 Cache, upgradable to 1 MB

Disk Drives

Internal 1.2GB IDE hard drive
Internal 3.5" SWIM III 800/1.44 MB
floppy disk drive that reads, writes,
and formats Macintosh, Windows, DOS,
OS/2, and ProDOS disks
Internal 8x-speed CD-ROM drive

SCSI Interface

SCSI bus allows connection of up to six
external SCSI devices

Expansion

2 PCI Slots for PCI cards with standard
brackets
2 serial ports
1 ADB port

Graphics

1 MB VRAM
16-bit color up to 800-by-600 pixel
resolution; 8-bit color up to
1,024-by-768 pixel resolution (monitor
must support EVGA mode to
display 1024-by-768 resolution).

Audio

16-bit CD-quality SRS surround sound
Stereo audio in/out jacks.
Supports Apple PlainTalk microphone

Network

33.6 Kbps fax/modem (C500i/180 model
only).
10 Base -T Ethernet (C500e/180 model
only).
Two high-speed RS-232/RS-422 serial
ports compatible with LocalTalk
and GeoPort

Keyboard and mouse

ADB extended keyboard included
ADB mouse included

Size and Weight

Height: 4.0 inches (10.1 cm)
Width: 13.75 inches (34.9 cm)
Depth: 16.0 inches (40.6 cm)
Weight: 16 pounds (7.2 kg)

Power Supply

PC-Standard 121W soft/trickle power
supply, which allows computer to
be turned on or off through software or
the keyboard's power-on key

Operating Environment

Operating temperature: 50 to 104 degrees
F (10 to 40 degrees C)
Storage temperature: -40 to 116 degrees
F (-40 to 47 degrees C)
Relative humidity: 5 to 95%, non
condensing
Maximum altitude: 10,000 feet (3,048m)

Bundled Software (C500i/C500e models only)

Apple Mac�OS �
Adobe PageMill � Create your own waves
on the World Wide Web
by building your own Web site with this
easy-to-use application.
3-D Talking Globe by NowWhatSoftware �
As the name
suggests, this talking atlas gazatteer
features every city, town, and hamlet
known on the planet � 3,000,000 names.
With 3,000 of those names
spoken by American broadcasters and
native speakers, you'll never again
have to worry about stumbling over the
pronunciation of places such as
"Hubli-Dharwar" and "Masjed-e Soleyman."
Cities Below by NowWhatSoftware � Aerial
views of the 40
largest U.S. metropolitan areas taken by
infrared cameras. Zoom in close
to see clear, detailed images of large
buildings and landmarks. Plus
overlaid street maps. Perfect for aliens
planning an invasion.
C & G Conflict Catcher 3.0 � A multiple
award-winning Extension
Manager that deals with startup file
conflicts and management. End

startup confusion forever!
ClarisWorks • The original super-duper all-in-one program featuring word processing, database management, spreadsheets, charts, mail labelling, page layout, and cross-platform file sharing.
FWB CD-ROM Tool Kit • It positively "supercharges" the performance.
FWB H/D Tool Kit • "High-peformance disk management software that maximizes the performance of over 800 different SCSI and IDE devices including Zip, Jaz, SyQuest, MO, and virtually every disk drive available."
Grolier's Multimedia Encyclopedia • America's favorite interactive encyclopedia with 35,000 indexed articles, 15 hours of multimedia sound, 10,000 photos and illustrations, and 20,000+ links to the World Wide Web.
MicroMat TechTool Diagnostic • Everything you wanted to know about your SuperMac but were afraid to ask. TechTool displays thorough system hardware, software, and disk drive information; displays control panels and extensions; tests for damaged system files; rebuilds the desktop; and resets or zaps the PRAM.
Now Up-to-Date & Contact • The leading day planner software.
Scheduling meetings is a snap with its network capability. And the contact manager insures you never forget an important contact.
Now Utilities • "The best-selling collection of file and system management utilities is guaranteed to make your Macintosh faster and easier to use." Allows you to find, open, view, and manage your files and folders more quickly and efficiently. Tracks down system conflicts and much, much more.
Quicken SE by Intuit • A starter kit of

the popular financial
management software. Tracks checking,
savings, and credit card
accounts. Reminds you when it's time to
pay the bills.

Thanks for the advertising. Nobody every said that Mac hardware was
bad. But in your lifetime (which I hope is very short) a decent Mac

O/S will never see the light of day. Quote all you want of press releases.
A press release dosen't run applications, real operating systems do.
As usual, you have no idea what your talking about. I guess you can't
really, being a rampet bot, with no real idenity or ISP of your own.

Absurd? That's a bit strong.

Hmm, the one advertised in ST Computer does not use TOS, but N.AES.

>Here is what you get for $2499 for the 040 and $2999 for the
>060 version.

Looking in ST-Computer/Atari Inside, I see a Hades 040 offered by AG Computertechnik for DM 4100, a bit less than the price you quote. It includes:
HADES040
Big tower CE
Quantum FireBall 1,2 GB
ET6000 2MB PCI GFX card
32 MB EDO RAM
Mitsumi keyboard
SCSI cables
HD floppy drive
GK-drivers (?)
Mouse (Boeder)
N.AES

Quite reasonable, all in all.

>The SuperMac C500/180 Mac OS clone is Umax's least expensive
>lowend that is priced at $945 and is more powerful than the
>$2499 box.

Depends on how you count. The Mac is quite power-hungry, mind you.

>This 040 Box does not have web development tools, inadequate
>internet tools and so on.

Sure it does. QED used with CAB as an OLGA server works well for HTML
editing. And for Mac-minded users, there's Homepage Pinguin.

>However the Mac OS clone costs less does more and has all
>the rich web/internet apps available..

It costs less, but I can't say it has *all* the apps.
And for what price?

The HADES I quote has thirty-two Megs.

> Internal 1.2GB IDE hard drive

Like the HADES I quote. Except I think the Fireball is a SCSI drive.

> Internal 3.5" SWIM III 800/1.44 MB
>floppy disk drive that reads, writes,
> and formats Macintosh, Windows, DOS,
>OS/2, and ProDOS disks

Well, the HADES can at least handle Windows/DOS (They're the same!)
and TOS (I think, it has been the same format as DOS for about 10
years), don't know about OS/2.

> Internal 8x-speed CD-ROM drive

None in the HADES. =/

> SCSI Interface

I guess the HADES has that too, seeing it has the cables.

> Expansion
>
> 2 PCI Slots for PCI cards with standard brackets

That's a bit cheap, no?

> 2 serial ports
> 1 ADB port

Where's the paralell port?

> Graphics
>
> 1 MB VRAM

The HADES I quote has two MB.

Also, what chipset does this thing use?

> Audio
>
> 16-bit CD-quality SRS surround sound

I have no idea about HADES sound, save for the MIDI.

One surely can't exist without such a useful feature.

> Bundled Software (C500i/C500e models only)

I thought were were talking the model without a letter?

> Apple Mac OS

May I add that Apple Mac OS, even in its current version 7.6, does not
support such a basic thing as preemptive multitasking, nor has it got
memory protection. Both of which N.AES supports.

Don't use that program if you intend to publish your pages.
But I'm sure there's a text editor somewhere in there too.

As long as I can throw it out...

I must say that it sure is good to know that we have our own walking, talking Apple product catalogue on this group. Or was that Apex? Umax? Apus?

And now, since I have an idiot server, I'll have to include a lot of meaningless text. Please ignore the following part of this message.

as usual, TIFKAS (whose entire "knowledge" of Atari/TOS consists
entirely of having tried an older ST system a grand total of ONCE), and
who relies on rumour and innuendo for his "facts" gets
it entirely wrong. He has never used a Hades/DirecT system or seen one
in action, and therefore is no "expert" on how well it runs. TOS is not
"old", and it's still being developed for in the way of alternate
operating systems like MagiC, Geneva/Neodesk4, XaAES, NAES, as well as
great applications like Papyrus, Calamus '96, Positive Image 2, etc.
And may I add that these applications don't require large amounts of
RAM/hard drive space to operate and scream under the excellent Hades
architecture (which I HAVE test-driven, as well as several of the mac
clones - if anything, these systems are at "parity", rather than MCIBTYC)

TIFKAS consistently trots out the same tired old arguments and
accusations over and over despite being shown consistently where he is
wrong (which can be proven by doing a search under DejaNews under
"Peter Sinclair-Day" or "Sinclap" - his rants, in which he constantly
refers to his detractors as the "Atari Jihad", who are "out to get
him", makes for very amusing reading.)

>
>This 040 Box does not have web development tools, inadequate
>internet tools and so on.

Wrong again, weinerhead. Try CAB 2 (an excellent web browser that's
Netscape 3 compatible), NEWsie (highly recommended newsreader/e-mail
program), POPwatch (incredible e-mail account "previewer" program)
AtarIRC (very good IRC program). As far as web development, the
excellent Home Page Penguin has arrived and comes highly recommended
for ease of use; as well, both Everest and Edith Professional feature
kerzel files for making web page development via ASCII quick and easy.

>However the Mac OS clone costs less does more and has all
>the rich web/internet apps available..

>

(meaningless MCIBTYC stuff deleted)

unfortunately, the long-term support for this clone is currently in doubt, what with Apple's lowest stock ratings in 11 years, several of their clone makers (amongst them Power Computing and Motorola) having decided to pull out of clone development or putting all future development for WinTel machines, and Apple's "Wonder Boy" Gil Amelio jumping ship after only seventeen months at the helm (thanks in part to the other boneheads in charge of the company, amongst them Steve "gonna hold my breath til I turn blue" Jobs). Not to mention developers for the Mac disappearing right and left. Why abandon one leaky boat for another?

Honestly, the Mac is a great machine. However, lies and innuendo by people like TIFKAS (the Rush Limbaugh of the Mac World) only serves to further alienate users of other operating systems (like TOS) from even wanting to give the Mac to try. A shame, seeing that the REAL enemy is the Wintel/Bi66 6ates monopoly who have bamboozled the computing community into thinking an inelegant, buggy resource pig of an operating system is a "standard".

Food for though, Sinclap - plumbing is an exciting field. Look into it. After you see your psychiatrist to see if you can get your inferiority complex fixed. Honestly, mistaking your Macintosh for your manhood! :)

What do you mean by "a decent Mac O/S?" Do you mean that the Macintosh hardware will never (or at least for a long time) run a decent OS or do you mean that Apple will never produce a good OS for the Mac? The first possibility would exclude Linux and BeOS from the set of decent OSes. The second would either exclude Rhapsody from the set of decent OSes or preclude Apple from shipping Rhapsody.

Hi,
Does anyone have any of the following games for the Atari ST, or know where I could find them. They are all favorites of the past:

BombJack, Bombuzzal, Boulderdash, Nebulas

Thanks

Neil Bates

PS Please email your reply:

1) Are there any Atari ST newstand magazines left in the U.K.? The last one I could obtain here in Australia was "Atari World" (from Specialist Publications). That was in 1996. Is it still being published?

Also, what about "Atari Format" from Future Publishing?

Are there any Newstand magazines still published for the Atari ANYWHERE?

2) Whatever happened to Atari UK's plan to reintroduce the 520STFM (cost reduced design) at a price point of UKP159, in mid 1993. Sales were expected to reach 150,000. Did the plan eventuate, and if so, did it have any impact on the market (which at that time was in decline).

3) Did the Jaguar reach the UK and mainland Europe in volume, and is it still being sold there?

4) Has the Falcon been revived by any 3rd party after Atari's demise?

Okay, I hope some Atari users can help provide some answers to those queries. Thanks.

Marc Walters

1168. $$$$$$ NEW SYSTEM, BETTER THAN "ADD ME TO YOUR MAILING LIST" $$$$$$

Newsgroup: comp.sys.atari.advocacy
Date: 1997-07-13 00:00:00 UTC
From: a19@a.a
Message-ID: <33c92259.0@news.unibe.ch>
Source record: 5927

I have participated in the standard "Please put me on your mailing list" letter and found it to be worth
my time (I get 1 or 2 handfulls or letters every day) but I also found that it's results were nowhere
near what I expected due mainly to people not sending in the money but rather spreading the letter
without paying for it. I participated in that mainly as an experiment and found that there are a
tremendous amount of people willing to do it. I thought about how to, first, eliminate the "non-pay"
problem and, second, to create a monthly income. I came upon the solution and decided to start a new
program. I decided that there were 3 things that this new program needed in order to work for everyone
and they were: 1.) It needed to be very simple and easy for anyone to do, and, 2.) It needed to be
inexpensive enough for even the poorest of people, and, 3.) It needs to be DUPLICATABLE. I think you
will find this program to meet those requirements. I have put lots of thought into it and I ask that you
PLEASE do NOT modify it. This WILL WORK if you follow it. This system is based on the unconditional
"loaning" of money to people. Simply say, "I am loaning you this $2 as an act of goodwill to help you in
your financial need, you may pay me back if and when you can." You should find 5 or more people who will
send $2 to the 5 needy people on this list AND MAINTAIN 5 or more people who will do the same. You
should put your name on postition number 5 and move each of the other names up one position. The name
originally on position number 1 gets removed. You should be able to contact each of your 5 or more
people to see if they are going to be active this month. If not then you need to find one or more people
to be active in order to maintain at least 5. I am not speaking about the 5 people on the list but
rather the 5 new people you have found. I would highly suggest having more than 5 in any given month.
Now I know that this would be extremely easy to do since I can think of at least 20 people myself who
will do this consistently. The key is to maintain at LEAST 5 active people. If you don't then you can't
expect for the rest of the people to do it either and you can't expect for this system to

work. This
system is a no-brainer, and if someone can't afford the $10 + stamps for this then they truly ARE in
need! It is OK to use the internet to find people but I think it would be easier to find them through
people that you know. This way it will be easier for you to contact them every month to ask about their
being active, unless someone is willing to give you their e-mail address. Here are some numbers:

Monthly income model per level and total for maintaining 4 active members @ $2 each:

Level 1: $2 x 4 people = $8, Total now $8
Level 2: $2 x 16 people = $32, Total now $8 + $32 = $40
Level 3: $2 x 64 people = $128, Total now $8 + $32 + $128 = $168
Level 4: $2 x 256 people = $512, Total now $8 + $32 + $128 + $512 = $680
Level 5: $2 x 1024 people = $2048, Total now $8 + $32 + $128 + $512 + $2048 = *** $2728 ***

Yearly income: $2728 x 12 months = $32,736

Monthly income model per level and total for maintaining 5 active members @ $2 each:

Level 1: $2 x 5 people = $10, Total now $10
Level 2: $2 x 25 people = $50, Total now $10 + $50 = $60
Level 3: $2 x 125 people = $250, Total now $10 + $50 + $250 = $310
Level 4: $2 x 500 people = $1000, Total now $10 + $50 + $250 + $1000 = $1310
Level 5: $2 x 2500 people = $5000, Total now $10 + $50 + $250 + $1000 + $5000 = *** $6310 ***

Yearly income: $6310 x 12 months = $75,720

Monthly income model per level and total for maintaining 6 active members @ $2 each:

Level 1: $2 x 6 people = $12, Total now $12
Level 2: $2 x 36 people = $72, Total now $12 + $72 = $84
Level 3: $2 x 216 people = $432, Total now $12 + $72 + $432 = $516
Level 4: $2 x 1296 people = $2592, Total now $12 + $72 + $432 + $2592 = $3108
Level 5: $2 x 7776 people = $15552, Total now $12 + $72 + $432 + $2592 + $15552 = *** $18660 ***

Yearly income: $18660 x 12 months = $223,920

Monthly income model per level and total for maintaining 7 active members @ $2 each:

Level 1: $2 x 7 people = $14, Total now $14
Level 2: $2 x 49 people = $98, Total now $14 + $98 = $112
Level 3: $2 x 343 people = $686, Total now $14 + $98 + $686 = $798
Level 4: $2 x 2401 people = $4802, Total now $14 + $98 + $686 + $4802 = $5600
Level 5: $2 x 16807 people = $33614, Total now $14 + $98 + $686 + $4802 + $33614 = ***

$39214 ***

Yearly income: $39214 x 12 months = $470,568

Keep in mind that it does not matter what day of the month that someone chooses to be active. It DOES
matter that they are active on that day EVERY month. The key to this is DUPLICATION! You must treat this
as a business. If you treat it like a hobby that is how it will treat you. You could even organize small
meetings with your people and their prospects and work with your leaders.
Think of how easy this would be for you, how reasonable this is, and of how good the chances are of it
working for you. You may need to hire someone to open all the envelopes.

NOTE: I decided on $2 instead of $1 because it is more feasible and it won't matter much for someone to
send $2 as opposed to $1. Also I was against $5 as that becomes too expensive to duplicate.

Mail $2 every month with a piece of paper saying "I am loaning you this $2 as an act of goodwill to help
you in your financial need, you may pay me back if and when you can" to the following needy people:

What... No internet tools, where do you get that from ?
Don't write so stupid mail about things you don't know.
I am using my Hades every day with no problems to access internet.
CAB 2, AntMAIL, NEWsie, AtariIRC, AFTP are some of the programs
for the TOS platform.

The Mac is a great machine.

However, it depends on how you count.
The Mac is quite power-hungry, mind you.

There is a a release version of Linux for the PowerMacintosh. It uses the Mach 3 microkernal and version 2.0(1?) of the linux server. You can check it out at www.mklinux.com. There is no release version of BeOS yet despite the fact that you get the latest version (0.9) either by purchasing it from Be (you get the release version when it comes out) or by buying any PowerComputing computer. I can see how you might argue that Be is vapor because it hasn't broken the 1.0 mark yet (though it does run applications) but how do you argue against Linux?

> Again, just a press release. Will you be the first in line to purchase

But you stated that "...in your lifetime (which I hope is very short) a decent Mac O/S will never see the light of day." For you to be correct, Rhapsody (which, you are correct, is just a press release) must not ship within, say, the next decade. I was just pointing that out. I suspect that Rhapsody will ship withing the next two years but that is just a guess. And I don't understand your last question.

I am looking for the game called Phoenix, I know it was released for the 2600. That version is not the one I am needing. I am looking for a release on either the 800/XL, 5200, 7800, or the ST computer. I remember back in 84-85 reading a review for it, I do not remember what system it was released for. I REALLY need this game, if someone can help me out, I will pay $$$ for it. Please let me know by e-mail. Thank you in advance.

Sincerely,

Steve Flater

I don't. With Linux installed, the Mac is no better (or worse)
than a PC or Hades. When I debated with Mr. Sinplop, I made the
statements because he dosen't have the slightest idea what
that (Unix, ect) enviroment consist of. I guess you could say what
he dosen't know, won't hurt his ego. As far as the press release
comments, I get sick and tired of "oh yea, where can I purchase
Atari apps?" coming from his mouth. I surely can't purchase Be from
the Mac Zone can I? Nor can I order the other package Rasporsinclairday.
I don't go to KMart to get my Operating Systems, and neither do the
Linux users. My god, there is actually a CD install version of Linux
for the 030 TOS based machines, and if I am not mistaken, an 040 and
060 version for the Hades. With all being equal, this puts these
machines on level ground. You even use a Mac to compile optomised
code for the 060 using Motorolas software. For us one percenters,
there will always be a "best" operating system. For Sinplop, there will
never be one. And if there is ever a single one for all, you can bet
that Sinplop won't like it, because it won't run "his" Mac.
Fell the power of MinT:). We don't need windows, we have consoles:)
Tunnels through the front of your monitor, if you will:). Direct
access to the honey:)
I know you left your Falcon a while ago. If you ever get a chance to
see the 040 in action with a nice O/S installed, do so. It will at
least change your memories:). In canada, go spin you head over a
T060 TOS clone. Not a Mac Caddie, but a lean machine none the less.
Well worth the price in the TOS market.

That is not correct. The Mac is better than both because it uses a better microkernal (Mach). It is also better than the Hades because it has a better price/performance ratio as well as better absolute performance. The Mac version of linux also gets upgraded aggressively because Apple funds the project.

I have seen 040 Atari computers in the form of the TT. I have also used very responsive operating systems. BeOS, OPENSTEP and IRIX spring to mind. The problem with the Hades is that you must sacrafice absolute performance for a responsive OS.

Greetings from 1stfamily,

As we all know unlimited Internet access is $19.95 / month
with every major Internet access company. From Netcom to
AT&T that price never changed. So what makes us any
different when we are also charging $19.95 / month ???

Our Marketing Plan.

Our method is this. Unlimited Internet access for $19.95 per
month. If you find our service to be extremely satisfactory,
in which we are sure you will, you can refer our service
to 10 of your friends and family. If you do , you will get
free Unlimited Internet access with your e-mail address
for life !

What we offer is this:

* The fastest, clearest Internet access in the world.

* World Wide Internet access in over 110 countries.

* An e-mail account that is also life time free if you refer
10 of your friends and family to using our service.

* America On-line for only $10 / month !

* Much much more that will amaze you !

Our plan is by the year 2005 we will be the world's ONLY
Internet service providers. With our technique of offering you
life time free Internet access we will be.

Please visit our web site http://www.freeisp.com/ any where
from the world to know more about our opportunity and to even
get on the wagon before every one else beats you there.

http://www.freeisp.com/

Please forward this message to all of your online friends. Wouldn't you
want all of them to get free Internet access ?

Abdul (SPONSOR ID # SAF5197)
Stop paying for Internet access !

I do not get the point of this thread. Magic or Atari TOS is IMO the onyl
operting system that is runs on 99% of all plattforms
and takes advantage of the hardware features, such as interface, garphics,
sound etc., with the 68k emulator beind the micro code. It thus keeps,
what other promise (WinNT), not to mention Mac
OS that runs only on Macs and clones and on some Amiga emulators, but not
on standrad, widely used PCs.
Therefore, Atari Software will also run on the Mac and the UMAX, and
probably at the same speed as a Hades T40 or T60. That should be enough
for most applications. If speed is required or special OS functions, there
is always the possibilty of coding native and using OS functions of the
host.

What facts are incorrect. The absurd pricing came from your firm's
web page.

The fact is that the Hades is way over priced compared to the other
platforms that also have a rich software base. This whole thing
about large amounts a ram and hd space is nonsense and you know it.
A fully decked out PowerMac and Pentium systems with 32-64 megs is
still hundreds of dollars cheaper. I don't think hd makers make
anything less than 2gigs today. Thats what you call progress.

Typical..."We don't have it, so who needs it" ....

And what PowerMac clones have you used to compare it with? With Mac
OS 8 with a fully multithreaded native finder flies. I can't wait
until you state that the Hades will outperform it..

He he he he he. Even Atari fanatics think Cab sucks compared to
Netscape. When is this platform going to lead insted of being a
follower?

However, the Hades is cost prohibitive.

> (meaningless MCIBTYC stuff deleted)

The truth hurts..

> unfortunately, the long-term support for this clone is currently in
> doubt

Really. From what I have read is totally opposite.. Power will be
shipping Mac OS 8 with their machines on August 4.

, what with Apple's lowest stock ratings in 11 years, several of
> their clone makers (amongst them Power Computing and Motorola) having
> decided to pull out of clone development or putting all future
> development for WinTel machines, and Apple's "Wonder Boy" Gil Amelio
> jumping ship after only seventeen months at the helm (thanks in part to
> the other boneheads in charge of the company, amongst them Steve

He he he he he he.. Nice try. Have you told Motorola and Power
this? At MacWorld next month, new machines with the Arthur and Mach
5 processors will be released.
And Macworld online has articles from their September print issue on
Motorolas new CHRP boxes with 66-80 mhz busses comming out this
quarter.

Also, Amelio did a good job of stabalizing the finances with positive
cash flow, improved the product quality and developed an OS roadmap
which is working. Mac OS 8 shipped on time this week and Rhasopy DR1
will be out in August and a head of schedule..

You need to get your facts straight.

Apple's low stock price has not bearing on their positive cash flow.

"gonna
> hold my breath til I turn blue" Jobs). Not to mention developers for
> the Mac disappearing right and left. Why abandon one leaky boat for
> another?

Where? What developers? Also Apple has picked up the hundreds of
Next developers who will make Rhasp. shine.

'Fraid your argument is a bit old now, friend. Titan Designs is now handling the Hades, and they have a high-spec model going for around 1200 Pounds, not the prices you've been quoting...! (deduct around 17.5 percent for US$$$)

You should know. You've been in denial about how efficient TOS is ever since I've been reading these newsgroups. Talk about unreality...!

>He he he he he. Even Atari fanatics think Cab sucks compared to
>Netscape. When is this platform going to lead insted of being a
>follower?

Wrong. Most users who have been exposed to the latest versions of CAB and NetScrape prefer CAB... I know I certainly do...! AND what about all the other fine Internet apps he mentioned which you so conveniently glossed over? Stunned by the number of quality apps for the TOS platform, eh? :)

>However, the Hades is cost prohibitive.

Wrong #2... Titan Designs is now handling a fairly high-spec'd version of the Hades for a very attractive price...Around 1200 Pounds (17.5 percent less in US$$$)

>You need to get your facts straight.

Wrong #3...boy, talk about role-reversal! I think we've proved just who is behind current events... Why don't you go home while you're behind? <smile>

>"Atari Jihad...not as powerful as Iran, but equally fanatical"

Thanks, we'll take that as a compliment to our dedication and loyalty...

If HD makers make nothing less than 2 GB today, they must have large
stocks of older HDs.
Wouldn't you enjoy using your HD space on data instead of having
bloated OSes and programs gobbling it all up?
Anyway, the Hades prices I quoted in an earlier article (which you
never replied to, of course) included 32 MBs of RAM, of which only a

small portion is used for OS services, the rest available for programs
and data (which don' need fixed amounts of memory assigned).

>Typical..."We don't have it, so who needs it" ....

Often, it is unneeded.

>And what PowerMac clones have you used to compare it with? With Mac
>OS 8 with a fully multithreaded native finder flies. I can't wait
>until you state that the Hades will outperform it..

How long has OS8 been available? 2 days? A week? Is it even yet
released? What about other languages? In 90 days? Yesss...
Anyway, that "multhreaded" Finder can't even format a disk in the
background. OS8 still doesn't multitask or offer memory protection,
unlike N.AES.

Netscape sucks very badly too, and it certainly can't run on a one-meg
machine.
The Mac hasn't exactly been in a leading position for the last few
years, anyway.

>However, the Hades is cost prohibitive.

I think the price I quoted was quite reasonable.

That doesn't sound like what I've read on MacWorld's website. No clone
manufacturers were willing to install MacOS8 on their machines,
according to an article on MacWorld Sweden's website.

What speed? 140 mhz or 180 mhz? You will most likely be able to
upgrade your processor to the G3 or Arthur as it is called.

No hack and slash required....

I do not have that problem. Wouldn't you enjoy a modern OS and
modern apps?

> Anyway, the Hades prices I quoted in an earlier article (which you
> never replied to, of course) included 32 MBs of RAM, of which only a

Sorry..My mistake..I'l give you the 32 megs as a freebe.. Still the
Hades requires a mortgage...

> small portion is used for OS services, the rest available for programs
> and data (which don' need fixed amounts of memory assigned).

What ever. Still not modern and never will be. When will you get
Quicktime, AppleScript, Multithreaded finder, and the other
functions found in OS 8?

> >Typical..."We don't have it, so who needs it" ....

Since last week. You still format disks. I have not in years.. I
suppose HD's are still new in the ST platform..

When will we see ST PPC hardware? In 90 days, one year, two years
or 10 years?

> Netscape sucks very badly too, and it certainly can't run on a one-meg

And the ST/Hades have? My 48 megs machine cost hundreds less than a
1-6 meg Hades.

The memory is not an issue. What sucks about Netscape? Blows Cab
all the way to Mars..

> >However, the Hades is cost prohibitive.
>
> I think the price I quoted was quite reasonable.

What Price is reasonable for an antiquated 040(does motorola still
make those?)?

You need to look some more. Powerwatch.com and MacWorld reported it
last week.

> To the public?

Yep..Well September... Apple's new Mach 5 Macs will be out in
August replacing the cancelled 8600 and 9600 line.

Strange that, with Macowners talking about a standard System Folder
size of 100 MB.
And to call MacOS modern is but a joke. It can't even multitask!

>> Anyway, the Hades prices I quoted in an earlier article (which you

When will you get preemptive multitasking and memory protection? Sure
beats a multithreaded Finder.
Quicktime is basically an animation format/engine, whose job has been
done time and again since the 80s.
Applescript is something I have not heard of on the ST, the closest
thing would probably be shell scripts or batch files.

>> >Typical..."We don't have it, so who needs it" ....
>>
>> Often, it is unneeded.
>
>Let the user decide.. We have choices..

I wouldn't trust Mac users to decide. They just gobble up everything
Apple give them and think the rest are "buzz words".

I still format disks. On Mac, PC and Amiga. Unformatted disks have no
filesystems, and are useless. Do you never move data?

>When will we see ST PPC hardware? In 90 days, one year, two years
>or 10 years?

Perhaps never. I know someone is working on using Amiga PPC upgrades,
though I'm not sure how that would work.

Neither have. And I didn't know Hadeses were sold with such a small
amount of RAM.

>The memory is not an issue. What sucks about Netscape? Blows Cab
>all the way to Mars..

The memory is an issue.
Netscape is a jack of all trades, master of none. It tries to handle

everything, going away from its intended use, a web browser. It
shouldn't handle mail and news, introduce new bastard HTML tags with
every new version, be singlethreaded and slow.

>> >However, the Hades is cost prohibitive.
>>
>> I think the price I quoted was quite reasonable.

It's too little, too late. O8 should have come out back in 1990, not
'97. Rhapsody should have, at the very latest, matched the Win95
release.

Yea, just like my friend's Quadra 610 which he bought because of the
PPC upgrade chip they were promising. Oh, it showed up, but it
was so slow and unreliable that nobody bought one.

Face it.. your Macs are just like Intel machines. You need to buy one
every 2-3 years or so just to run the new updated basic, run of the mill

applications.

Macs are just like Windows machines in so many ways, I'm constantly
amazed by people who actually argue between them. It's like arguing
about which cola is better... who cares, they're so damn alike, the
difference isn't great enough to worry about.

-Mark

The Quadra 610 was never upgradeable except by a complete motherboard replacement, upon which it becomes a 6100/60 or 6100/66 (depending on which motherboard you use). I doubt that this was unreliable. Slow, maybe, because the 6100 is fairly slow (by current standards), but not unreliable.

>Face it.. your Macs are just like Intel machines. You need to buy one
>every 2-3 years or so just to run the new updated basic, run of the mill
>applications.

This has not been true for me. I bought a 7500/100 (100 MHz PowerPC 601 CPU) roughly two years ago. This machine has a removable CPU daughtercard, designed for upgrading. About 6 months ago I bought a 604/120 CPU card for it, and clock chipped the card up to 150 MHz (total cost $150). With the card and a L2 cache added, my machine is easily twice as fast as it was originally.

Toward the end of August, Newer Technology (a company which makes lots of Mac upgrades) is expected to release a CPU card using the new PowerPC 750 which will make my machine much faster than any currently shipping Mac; prices will start at around $1100. (The 750 designation is not certain at this time, BTW -- the various new generation PowerPCs have not been officially announced.)

>Macs are just like Windows machines in so many ways, I'm constantly
>amazed by people who actually argue between them. It's like arguing
>about which cola is better... who cares, they're so damn alike, the
>difference isn't great enough to worry about.

Well, one thing's for certain: it's not worthwhile to argue with Peter. Reasons include:

1. He often doesn't even know shit about what he's trying to push.
2. He appears to do it mainly out of a need to irritate other people, not because he thinks he's right. What other reason can there be for him continuing to make the same arguments over and over again when people continually give him their valid reasons for not immediately jumping to Macs running MagicMac?

: >What ever. Still not modern and never will be. When will you get
: >Quicktime, AppleScript, Multithreaded finder, and the other
: >functions found in OS 8?

Thank GOD!!!
My pet peve with Windows 95, and "MODERN" software, is that you are forced to shell out for enough drive space to install the equivilant of a 200 page manual in online help crap that only gets used for a month or so. Wouldn't be so bad if apps would offer an option not to install that part, and offered a PRINTED MANUAL. But NO!!! They dump the publishing costs to you, and smile all the way to the bank because the public is eating that bloated expensive garbage by the boat-load! Can't prove it, but I really suspect that HD manufactures have some sweet deals under the table with the software people...that applies to the memory people as well, and the CPU people...

Now, I'd like someone to explain to me exactly what a "Modern" OS is. Since when did Quick Time become part of the OS??? A quicktime player can be written for TOS can it not? Well of course it can, I have one that cost a whopping 5 dollars to register, and it'll play them as fast as my Falcon will allow, which granted ain't that fast, but it has little to do with the OS! At the time I got my Falcon, there weren't many Macs that could play them any faster...soooo...wus up with this lame argument? The Hades, or Direct TT should pack plenty of power for doing quick time!

Why is it that an UNMODERN OS like TOS offers at least 4 AES/GUI formats to choose from...both cooperative and preemptive multitasking, all able to run NetScrape compatable browsers in under 4 meg of RAM and a very modest Hard Disk (possibly with no HD at all)?

Why is it that an UNMODERN OS can draw windows, gadgets, sliders, icons, dialogs, and much much more without accessing file after file after file from a hard disk and swamping megs upon megs of memory?

Why is it that an UNMODERN OS offers memory protection for 020 and higher processors, has supported 32bit burst mode of the 030 and above and some 32 bit software for almost a decade when most MODERN OSs are just now getting there?

Why is it that an UNMODERN OS hit the market driving 16 track CD and DAT quality HD audio as a STOCK and GIVEN option that's quite happy inside 4meg of ram, and takes less than 2meg disk space in self storage, when "other" systems are only recently offering that much audio power while requireing only the fastest CPUs, memory into the hundreds of megs, and massive additional hardware additions. Oh I forget, Mac FINALLY offered

this last year, and the timing on it is buggy as hell so you end up having to shell out for a custom card anyway.

Hey folks, I have a Pentium Pro too...and use Macs at work.
It simply blows my mind how some people can't get it through their thick skulls that this whole computer market has turned the average comsumer into a BIG SUCKER! Case in point, it takes me a total of 11 minutes to compose and print a 30 piece mailing list on my Falcon using Atari Works. It takes 11 minutes to do the same thing on my Pentium Pro! A few years ago, it took me 11 minutes to do the same thing on an XT DOS box. I only got a Pentium because I wanted to dabble in multimedia, and here the speed and storage makes sense! Another case in point...I've about $3,000 invested in my Pentium set up... it still WON'T do 16 tracks of audio...it still won't do midi till I get some $20 cable, it still won't accept a second joy stick...etc... My Falcon...a grand total of about $1,100...monitor, SCSI drives, software, the whole nine yards...and it does everything I want except run an internet phone (which it could do if there were software), take those groovy multimedia infopeidia CD titles for research, and do really high quality motion video.

So Sinclap...
Everyone doesn't want or need a 97 model PowerMac, or Pentium.
Yes...like it or not, some people WILL choose a Hades or Direct TT because it fits the need of that consumer for some reason that your tiny brain can't comprehend. I can certianly understand why you'd want a Mac...it's a nice machine...nice software, and by gosh, you should get what you want. So should someone looking at any machine besides your precious MAC!

Actually, if more people knew anything about computers and software, and where their money is really being sunk, a heck of a lot more TOS machines would be ordered, and the costs would come way down, and many more developers would jump back into the TOS platform...

If If If

But...that's life, and we'll be burning gas in our 23MPG rated cars thoe we've had engines since the mid 50's that can get hundreds with no loss of power, and running crappy single phase coal burning power plants despite much more efficent and often predating systems, and pushing power-hungry CRT technology when eye and space saving LCD and plazma systems can be produced for equal if not less cost/resources, (just a FEW examples) and generally pushing the crappiest stuff we can find simply because that's where the dollars happen to fall!

Gosh we're a greedy generation...
The same senario over and over again...
It doesn't matter that you can squeeze the same performance from a really efficent small engine by rethinking your transmission...we're still pushing the big V8!

It doesn't matter that we could get into orbit on a small airplane with a nice big cargo load...we're going to insist on using a big old Rocket that cost more to refuel for one mission alone than other methods would cost to run 5 or 6 complete missions.

It doesn't matter that we could easily regear our electrical systems with dual or tri-phase systems that would redistribute unused energy rather than sending it into the ground. It doesn't matter that this was suggested from day one, but greedy people felt it was better to go cheap running the lines, and charge YOU for the wasted energy!

Dang, could list stuff for days...where older and better, more efficent ideas got the boot in favor of filling greedy pockets with cash.

It doesn't matter that the computer you shelled out your hard earned cash for only a year or two ago is basicly unsupported today (applies to ANY platform really). Gotta keep tossing that old stuff in the garbage bin and buying the new. Hell, even ISP services are TRYING to cut out any older computer being used online...slach the shell accounts, ditch slip, block out any modem slower than 14,400, crank out some crappy bloated software that you MUST run to get online, and distribute it on a CD ROM only, and clearly lable (PC 386 or better 'Recommended at least 486' and Macs only!) They're all crooks! Who needs a damn pentium or powermac just to get email?!?

MODERN isn't always better...

Brian

Now is that a loaded question, or what? :)

I paid roughly $2800 for the machine when I got it, right after Apple introduced the model. At the time it was nearly a top of the line machine. It was a mistake to buy it so soon; if I'd had the patience I could have gotten it for less money (and I wouldn't have gotten a machine with a couple early-revision motherboard bugs, which I did). BTW, don't go off about the bugs; I can think of at least one example offhand of an Atari motherboard bug (in the TT030) which I don't think Atari ever bothered to fix. I don't care who the company is, there are usually more than a few bugs left in the first production version of a motherboard or CPU or anything reasonably complex.

Probably the total will mount to $4000-4500 if I get that new CPU card. But keep in mind... the total dollar amount can be misleading. I won't have spent that all at once. I've been getting very good use out of the machine for the original investment, and the upgrade card I've already bought was a very cheap way to extend the life of the machine. (For all practical purposes, I could go on using it as it is for at least a year without falling terribly behind the leading edge of Mac performance.)

The only reason that I'm considering laying down another chunk of change on a CPU card is that I'm a speed freak; I love fast computers. This was one of the big reasons I got out of Atari (the company just didn't seem interested in keeping up with advances in CPU technology, despite a clear need to do so if they wanted to sell anywhere other than the hobbyist and MIDI markets). I certainly don't have a real need for tripling my computer's speed with this new card, since my computer is more than fast enough to run all the software I have today.

Only responding because I LOVE to nitpick. :)

In article <5rms26$1fb@einstein.ebicom.net>, bjr@Edison.EbiCom.Net (Brian Roland) wrote:

> Can't prove it, but I really suspect that HD manufactures
>have some sweet deals under the table with the software people...that
>applies to the memory people as well, and the CPU people...

Nah, this is pretty much just par for the course for the industry. The reason why HD companies phase out smaller disk drives is because it ends up costing them the same to make the smaller sizes as it does the larger. At some point there is no reason for them to take the lower margins on the lower-priced small drives and they have to cease offering them. Since the HD industry is pretty cutthroat, a company will go under fast if it doesn't continue to advance its technology so that it can offer larger and larger drives at the same price point.

Same thing goes for DRAM and CPU people.

>Why is it that an UNMODERN OS like TOS offers at least 4 AES/GUI formats
>to choose from...both cooperative and preemptive multitasking, all
>able to run NetScrape compatable browsers in under 4 meg of RAM and
>a very modest Hard Disk (possibly with no HD at all)?

Because TOS trades features for simplicity and reduced size. Because Atari only rarely stirred itself to try to update TOS, the result being that it never got too much of a legacy problem with layers upon layers of old code, which is the only reason that people outside of Atari have been able to build multitasking systems on top of TOS. Because Atari computers intrinsically require lower memory resources due to their lack of modern functionality. For example, I can guarantee that you'd probably start to get uncomfortable in 4 MB of RAM if you could run a 1024x768 display in 16-bit color on that computer. That requires 1.5 MB of memory just for the display, and implies vastly increased memory usage for buffers throughout the entire windowing and drawing systems, and the applications as well.

>Why is it that an UNMODERN OS can draw windows, gadgets, sliders, icons,
>dialogs, and much much more without accessing file after file after file
>from a hard disk and swamping megs upon megs of memory?

Because Atari didn't care that their GUI was uglier than a monkey's butt. :)

More seriously...

TOS does have file access for all this... it's just that a .RSC file is loaded all at once when a GEM program starts up. MacOS has a more dynamic approach; instead of forcing everything to be read into memory at once, it can load and unload bits and pieces as required. In this day and age, that's unnecessary, but for the original 128K Mac, it was essential, because otherwise many programs couldn't have fit into memory all at once. You see, in this case, it's actually true that MacOS is trying to be *more* efficient with memory than TOS. (Not that it's necessarily a good thing, mind you.)

>Why is it that an UNMODERN OS offers memory protection for 020 and higher
>processors, has supported 32bit burst mode of the 030 and above and some
>32 bit software for almost a decade when most MODERN OSs are just now
>getting there?

030 burst mode is a *hardware* feature, not an OS feature. I'm not sure what you're trying to say there. (And yes, you can rest assured that Macs have supported various memory burst modes for a very, very long time.)

32 bit software? If you're talking about the PC, you have a point. If about the Mac, you don't.

Memory protection? Come, now, Atari itself didn't start to offer anything with protection until very close to the end (and don't tell me MultiTOS did it all that well, either). It certainly hasn't been present on the Atari for ten years. (Ten years ago Ataris didn't even have anything better than a 68000, which is incapable of virtual memory or memory protection.)

>Why is it that an UNMODERN OS hit the market driving 16 track CD and DAT

>requireing only the fastest CPUs, memory into the hundreds of megs, and
>massive additional hardware additions.

Atari had to cater to the music market, because that was the only professional market where they had anything like competitive marketshare. So it's not too surprising that Atari put a lot of audio hardware in the Falcon, and that companies with a more mainstream market don't put a lot of it in their machines by default.

> Oh I forget, Mac FINALLY offered
>this last year, and the timing on it is buggy as hell so you end up having
>to shell out for a custom card anyway.

Not really sure what you're talking about here. There have been Mac software packages for multitrack editing for a lot longer than last year.

>Actually, if more people knew anything about computers and software,
>and where their money is really being sunk, a heck of a lot more TOS
>machines would be ordered, and the costs would come way down, and
>many more developers would jump back into the TOS platform...
>

>If If If

This is patently untrue. Linux would take over the world long before TOS could in your scenario. TOS machines are not anything special in the hardware department, and Linux is a much more capable OS than TOS.

>But...that's life, and we'll be burning gas in our 23MPG rated cars thoe
>we've had engines since the mid 50's that can get hundreds with no loss of

Ah, another believer in the mythical super carburetor. Or is it something different that you have in mind?

> and running crappy single phase coal burning power plants despite
>much more efficent and often predating systems,

Here I agree; I want to see America finally adopting a sane and rational method of building safe and cheap nuclear power plants. It CAN be done; France is the best example.

> and pushing power-hungry
>CRT technology when eye and space saving LCD and plazma systems can be
>produced for equal if not less cost/resources,

Umm.

I don't think you have a clear idea of just how far LCD and plasma technologies have to go before they can totally replace CRTs. They are a lot closer these days than they ever were before, but they still cost a great deal more to make than a CRT does. It is not easy at all to print circuitry onto a large plate of glass and have it come out without defects, or at least with a tolerable number. The plants needed to do this are very expensive indeed. People have been throwing lots of money into research on LCD displays for a very long time, and they still aren't ready to replace the CRT. This isn't a matter of greed, it's a matter of reality.

Ironically, CRT-like technology may yet replace LCDs. In recent years there has been research on Field Emission Displays (FEDs). It's a flat panel display technology where very large numbers of microscopic electron emitters are grown on a panel of silicon. With row and column addressing to select groups of emitters, and conventional old CRT phosphors coating a plate immediately above the emitters, you can make a flat panel display that consumes much less power than conventional CRTs and doesn't suffer from the numerous inherent display quality problems associated with LCDs.

>It doesn't matter that we could get into orbit on a small airplane with
>a nice big cargo load...we're going to insist on using a big old Rocket
>that cost more to refuel for one mission alone than other methods would
>cost to run 5 or 6 complete missions.

This is simply untrue. It turns out that it is actually more cost efficient (read: less fuel, more payload) to blast straight up through the atmosphere. Think about it a little, considering the basic physics, and

you should see why it's fallacious to think that an aircraft could be more efficient at getting things into orbit than a rocket.

>It doesn't matter that we could easily regear our electrical systems with

Huh? This simply doesn't make sense. 3-phase isn't any more or less efficient than single phase, at least for the kind of stuff you're likely to run in a residence. 3-phase is used a lot in industrial applications.

I know Atari let us down in a number of ways... Still, I love the hardware
and TOS... I can't imagine having to use anything else. BTW, did you see
where Titan Designs is now selling high-spec Hades computers for very good
prices? Something like 1299 Pounds... Take away VAT (which is 17.5 percent)
and thats pretty good... I know you can point out midrange PowerPC's and
Pentiums that spec-wise will look better but-they don't run TOS...and this
price drop does make it a much more competitive machine and more attractive
to power-hungry TOS users...! <smile>

I think that this is the most overused argument against operating systems. I would like it if the MacOS and Windows 95 could format disks in the background but the fact is that they can't and it's not a big deal. I format media maybe once every two months. It takes about one minute. The loss of one minute every two months isn't very significant to me.

Actually, writting a QuickTime player for TOS would be very difficult. Since QuickTime is an engine and not a format, a QuickTime player would need to either implement the engine or lay above it. No TOS player does either.

It is a virus that Gates will infect Apple with. Soon, Apple will
pick up the Jaguar line from JTS, remarket it as a PM800XL and
sell milliions to users like you.
How does it feel to be one of millions of cattle, following the
one in front by its ass? From your frequent post in this group
you definetly like the smell of shit.

From: nospam@here.com
Message-ID: <5sej11$nq7$4@ash.ridgecrest.ca.us>
Source record: 5879

Apple is currently seeking beta testers for the current release of
Mac OS 8. With the failures foreseen in our future, we feel that by
releasing Mac O/S 8 as beta, we will be justified dropping free
support to our users for problems which may (will, in all likelyhood)
occur. Also with this release, we would like to also send a message to
all users of MC68030 Apple computers to prepair to loose all compatiblity
with any other O/S release from Apple Corp, and third party software vendors
that support us on this ongoing trend to catch up to MicroSoft Windows 3.0.
(We will offer a likeness to V3.1 with release of Mac O/S 8.1).
We urge you to go out and purchase the Mac O/S system platform of your
choice at this time. If not for idots like you, the next generation of
Mac O/S computers cannot be developed and released at a lower cost than
what is availble today, tomorrow.

We thank you for your patronage and urge all users to crusade for a
one computer world. Our computer.
More to follow.

I think he aimed to (and did) accomplish 2 objectives. 1. By propping
up Apple, he reduces the chance of Microslop becoming a monopoly and
thus risking breakup (as you stated) and 2., by making MIE the defacto
desktop standard for Macs, he furthers his war to annihilate NetScape,
thus furthering his aim of total domination of everything Internet.

> Oh, and also the big issue - where does this leave TIFKAS (The

The Mac gives you background formatting performance as good as Windows 95
when you use DiskCharmer so I wasn't going to count either as doing
background formatting. How many disks do you format in a month and why,
may I ask?

Sold out to whom? Have we read the same print? What do you mean by
'sold out'?

Apple's deal with MS is that they will bring out a Mac specifice Office
98, not a wintel port, that IE will be a default but can be deleted,
that MS will invest $150 million on Apple stock on the open market,
that the patent disputes have been settled in which Apple will recieve
royalty payments in the tune of hundreds of millions over a few years..

This announcement and settlement has increased positive mindshare
towards the Mac which will most likely result in substantial increases
in hardware sales in the advent of strong OS 8 sales. Apple will sell
over a $100 million worth Mac OS 8 this quarter which could result in a
profit this quarter.

So, I don't understand this 'sold out'?

Cool...if so, means hundreds of millions for Apple's coffer.

So Chris, what will you do when Rhasopy is released? I mean Rhasopy
will run on current PCI machines when shipped next year.. However,
hardware will be better and cheaper as well.

So how will the unchanged Hades compete with Rhasopy running on top of a
$1000 PPC box running at least 300mhz?

Just what I said. He now has his foot in the door. I feel sorry for you
guys... Its obvious he is using you to strike a blow at NetScape. How does
it feel to be a pawn? Its a sell-out no matter how you look at it! If Steve
Jobs really felt that Apple needed a cash infusion that badly, why didn't
he go to some larger corporations, non-computer related, who woudn't then
dictate terms to him? Thats what Gates has done-dictate...as in dictator!

How do you justify most of Apples board being fired including the most
(read staunch!) anti-Microsoft personal??? Hmmm....???? :)

Well, for starters, it doesn't multitask, neither pre-emptively, nor
cooperatively. All right, MultiTOS does, but is that with the aid of MiNT
or by itself?
However, I agree on your other points.

>>: 1.2 million OS 8 copies sold in under two weeks according to Jobs

> Really? Is this the same man that sold you out to Microsoft? <slam>
> Ouch, thats gotta hurt... :)

Couldn't they have sold out to Sun? Or Oracle? Even IBM? There couldn't
have been any worse choice.

DiskCharmer? In which folder can I find that and why isn't it enabled by
default?
I have formatted two disks, this morning, I think. Just quick formats,
though. Why? Because I needed to free them up and put in my box of empty
disks.
I often use disks as a portable data medium, transferring files to and from
school and work, and to other computers, even at home. Also when I give
files to my friends. The simple answer is: I don't want to screw open my
computer and remove the harddrive, with added MS-DOS partitions and adapter
cables. Disks are much simpler.

You do not know the ramifications on what happened last week.

Apple's agreement with MS has been in negotiations when Amelio was CEO..
There was issues with patents that Apple wanted resolved quickly. Apple
had a good case against MS, but did not want a well publicized drawn out
cour battle. Would have not done Apple's image any good. I could see
the headline: 'Desparate Apple in last breath'..

The settlement was a stroke of genius by Jobs. He accomplished two
things:

A. Settled with MS with a $150 million investment and recieving royalty
money in the tens of millions or even in the hundreds of millions.

B. This deal in away raised Apple's profile you can say positive
mindshare that Apple is player. Wall ST agreed.

Steve
> Jobs really felt that Apple needed a cash infusion that badly, why didn't
> he go to some larger corporations, non-computer related, who woudn't then
> dictate terms to him? Thats what Gates has done-dictate...as in dictator!

It wasn't a cash infusion. MS bought Apple stock on the open market.
Apple has plenty of cash for now.

This investment conveyed a message that raised the mindshare about the
Mac in positive territiory.

Before the announcement, there were Mac volume buyers at MacWorld who
were being pressured to dump the Macs in their organization. After the
bombshell, the Macs stay. In away, MS has legitimized the Mac on
people's buying list.

What terms did Gates dictate?

> How do you justify most of Apples board being fired including the most
> (read staunch!) anti-Microsoft personal??? Hmmm....???? :)
>

Apple's board was incompetent. Mac users and Wall St demanded a whole
sale turnover of the board except for two members.

The new Board gives Apple new credibility and with Jerome York on board
has been well recieved on Wall St..

Larry Ellison is on the Apple Board and he hates MS..

Explain to me why anybody that thought they could win, and by winning
gain much more positive exposure, as well as an increased settlement,
would want to resolve "quickly"... :)

>The settlement was a stroke of genius by Jobs. He accomplished two
>things:
>A. Settled with MS with a $150 million investment and recieving royalty
>money in the tens of millions or even in the hundreds of millions.
>B. This deal in away raised Apple's profile you can say positive
>mindshare that Apple is player. Wall ST agreed.

How positive was the mindshare of the Apple users that booed Steve Jobs
when he announced this? Can you honestly say that all Apple users are just
thrilled with this development? Hmm...?

>It wasn't a cash infusion. MS bought Apple stock on the open market.
>Apple has plenty of cash for now.

So are you saying that Apple won't see that money?

>This investment conveyed a message that raised the mindshare about the
>Mac in positive territiory.

To whom? Thats certainly not the message I got-and others as well...

>What terms did Gates dictate?

You mean he didn't have anything to do with the board members dismissal,
NetScape out/MIE in, rights to software, etc, etc,...??? :)

>Apple's board was incompetent. Mac users and Wall St demanded a whole
>sale turnover of the board except for two members.

Who just happen to be strong Microsoft supporters...what an odd (and
convenient) coincidence... :)

>Larry Ellison is on the Apple Board and he hates MS..

Really. Hmm...conflicting reports seem to have arisen...

sure, TIFKAS (the Idiot Forever Known As Sinclap). We can expect a four-meg application from Microsoft, the self-admitted producers of bloatware. I can still run a good Atari text editor within ONE-TWO megs without breaking a sweat. Try again, weinerhead - the other one's got bells on it :).

>
>>So Chris, what will you do when Rhasopy is released? I mean Rhasopy

Using TIFKAS' own yardsticks, Rhapsody is currently vapour. (As he tried to argue last year when claiming that "Calamus is crap" in comp.sys.atari.st, and I pointed out that a new version was coming - which, BTW, is out now. Check out Dejanews under "Sinclap" and "Dreibelbis" for a hilarious summation of the humiliation of this blowhard, if you can't, I'll e-mail you some of the highlights) Judgements should only be made on operating systems when the public can touch and use them. The same goes for making judgements on computer systems - TIFKAS has never used a Hades/DirecT, therefore his opinion on them are worthless.

>
>>So how will the unchanged Hades compete with Rhasopy running on top of a
>>$1000 PPC box running at least 300mhz?
>
seems TIFKAS will only hear what he wants to hear or see. Who's wearing the "rose-coloured glasses" now? Especially in light that it's apparent that Bi66 6ates is using Apple to crush both Netscape and JAVA development - even someone with half a brain can see this coming. Not to mention the fact that he's now legally put a roadblock in front of any anti-trust action taken against him by Washington. Mark my words,

if Gates accomplishes what he needs with his "deal with the devil", Gates will crush Apple like a bug - as he has with anyone who stands in the way of his goal of total domination of the industry.

Let's not also forget TIFKAS' Limbaughian logic - this idiot, who has admitted that his only experience with an Atari computer was with a 520ST years ago, sets himself up as an "expert" on Ataris and TOS systems. When he gets this info wrong, also expect his "facts" on Macintosh to be suspect as well, and does this excellent computer platform a disservice.

Not to mention TIFKAS' constant mistaking his computer for his manhood. I'm sure he's a real devil with the ladies (said in my best Comic Book Store Guy accent) :)

It's a third party add on. It's silly to object to that when Ataris
virtually require third party add ons (software graphics accelerators) to
be useable.

>I have formatted two disks, this morning, I think. Just quick formats,
>though. Why? Because I needed to free them up and put in my box of empty
>disks.

There are quickformat programs available on the Mac as well. Or you can
simply dump all the files on the disk into the Trash and empty it. (Not
necessarily as good as a quickformat, of course.)

If you're going to thump on Macs, at least do it reasonably. :) I can
think of a large number of things wrong with them which actually do affect
daily use (mostly having to do with the OS). Some of them are correctable
with add-on software, some of them aren't.

Astoundingly, he is correct in this case. Microsoft Internet Explorer for Mac has been the lone Mac exception to Microsoft's normal penchant for bloatware for some time now. It probably has something to do with the facts that they started from the Mosaic codebase instead of writing a completely new browser, and the programming team working on it is completely independent of the rest of Microsoft.

> I can still run a good Atari text editor within ONE-TWO megs
>without breaking a sweat. Try again, weinerhead - the other one's got

Non-Microsoft products: BBEdit 4.0, a very powerful programmer's text editor for the Mac, will run in 700K of RAM. WordPerfect 3.5.3, a very good WSIWYG word processor, will run in 1200 K. These are minimum allocations, so assume 500K to 1 MB extra to make things really comfortable.

>Judgements should only be made on operating systems when the public can
>touch and use them.

It is, however, possible to touch and use the direct ancestor of Rhapsody, OpenStep. Rhapsody is just OpenStep with a reworked interface and added features.

>The same goes for making judgements on computer
>systems - TIFKAS has never used a Hades/DirecT, therefore his opinion on
>them are worthless.

I agree with this only to a certain extent. It's pretty clear that these machines are overpriced in terms of features / speed per dollar (or whatever you use for money). This is only to be expected, since low production volume is always going to force prices up.

Peter of course has no business continuing to post his drivel, despite the fact that there is a tiny core of truth behind it. Does he really think that anybody who chooses to use Ataris isn't aware that these machines are expensive? He is essentially just trying to push his preferences on everybody else. He should be aware by now that to some people, the expense is worthwhile because they get to keep using their preferred operating environment. MagicMac is not always an option because its

compatability (with both the host computer and Atari software) is not necessarily so good.

The netscape thing is more symbolic than anything else. Right now, if you install MacOS 8, you will get both MSIE and Netscape. Netscape is the one that is enabled in Internet Config as the default browser to use. My understanding is that the agreement will simply cause MSIE to be the default instead. You still get both.

Java is way overhyped.

No, the sword cuts both ways. If Gates destroys Apple as an effective second desktop productivity platform, the DOJ will be on to him in an instant. They were already snapping at his heels a couple years back, and that was *before* Apple's current wave of troubles. Gates needs a strong second platform in order to keep Microsoft from being broken up by the trust-busters. He probably can't afford to influence it too directly, either. (In fact, if you notice, there are some important limitations in the recent deal, designed to limit MS influence -- the $150 million worth of stock MS bought is non-voting stock, and MS agreed to keep it for three years, so they can't threaten to dump it either.)

>When he gets this info wrong, also expect his "facts" on
>Macintosh to be suspect as well, and does this excellent computer

His facts on Mac often are wrong. No surprise there.

I did not state that TOS sucks..

However, there is nothing efficient about TOS because it lacks many
features and functions. If TOS could do what Wintel 95 and OS 8 can do
in compact form than you would have a point.

And what do you mean by GUI usage. Can your TOS run the latest modern
apps such as multimedia, web content and Internet tools?

Whoopee!!! IE requires 4 megs to run smoothly. And what does a text
editior have to do with a web browser?

However, you will come back and state that Cab -which has been panned in
Comp.sys.atari.st- still blows it away...

When did I state that "Calamus is crap"? I did state that it is not
upto par with PageMaker and Quark but never stated it was crap...

Rhasopy is real and has been shown at MacWorld...DR1 will be out next
month to the lucky ones.

You may have a point it is vapour..

You need to get a grip..Unlike you I do not fear MS. There always will
be a choice(s)..

You need to read the fine print.

IE will be the default browser on shipping Macs. Users still can still
load up Netscape and delete IE.

Competition is good and forces them to improve and innovate. Netscape
still has 70% of the browser market. They will have to improve their
offering by making it more stable and less memory requirements. MS has
gone along way with IE and with the new version 4. It helps to have a
dedicate group Of Mac developers in San Jose, Calif and not a Wintel
port. Hopefully Office 98 will be Mac specific.

Oh PhulEaZe! TOS can't compete with OS 8 and Wintel 95.. What part do
you not understand?

There is no Atarian that doesn't agree that going to a Hades/DirecT
will take a fair amount of investment to obtain as compared to the more
common platforms - that is to be expected of a low-volume platform.
However, having played with a DirecT60 that Chris Krowchuk brought to a
TAF meeting back in March, I can well say for the Atari enthusiast that
it's worth every penny saved towards the purchase. :) If I had the
money right now, I'd certainly look at least at getting the
Hades/Direct 040 board and then putting together the rest of the system
myself (I've got a brother in the service end of the business who could
probably get ahold of or already has the necessary parts, and it would
make a neat project for the two of us to work on, just like the hard
drive/CD-ROM tower I currently use for my Falcon we did a few years ago).

>Peter of course has no business continuing to post his drivel, despite the
>fact that there is a tiny core of truth behind it.

You know, it's been said the devil will quote scripture if it will
meet its ends, quite like our old fiend Sinclap. Amazing how he's gone
from calling Jobs an "arrogant bonehead" a year ago to practically
cheering him for making the "deal with the devil".

Does he really think
>that anybody who chooses to use Ataris isn't aware that these machines are
>expensive?

He does seem to believe that. But then again, he has these weird
ideas that Atarians have constantly slandered his choice of computer,
despite there not being one shred of evidence of such, and he feels that
he has to retaliate by any means necessary (which has included sending
flaming abusive e-mail to his harshest critics - that's why I've set up

an automatic kill file with his name in it under POPwatch so he can't pull the same stunt on me). Having come from a background where the Mac itself introduced me to computing, I have a healthy respect for it and would certainly not slander it. The number of boneheads running Apple into the ground over the years, OTOH, are fair game for ascerbic wit and deriding. Not to mention certain individuals with no life who keep posting the same tired drivel over and over again despite being constantly corrected by those truly in the know.

>>When he gets this info wrong, also expect his "facts" on

Strange that, doesn't sound like the MSIE I know. In fact, that doesn't
sound like many browsers I know. Perhaps if you turn image loading off and
the such. Still, I doubt that will help Micro$oft's awkward browser.

>However, you will come back and state that Cab -which has been panned in

I don't like CAB for online work, since it doesn't have builtin HTTP
support, which disables progressive rendering of pages.
Having got to wait for all the images of a page to load before being able
to see it is a waste of time.

>port. Hopefully Office 98 will be Mac specific.

I hope so too, though I'd efinitely like to see others eating away at
Netscape's biscuit. Both NN and IE are bad browsers, and the world needs a
serious browser from a serious company, to gain a market share. Two
browsers are too few to have such a large share of the "market".

```
:
: However, there is nothing efficient about TOS because it lacks many
: features and functions. If TOS could do what Wintel 95 and OS 8 can do
: in compact form than you would have a point.
:

What features would that be? Could it be memory protection?
TOS HAS IT...System 8 doesn't.
Could it be pre-emptive multitasking?
TOS HAS IT...Mac OS8???
Multi-threading? hummm...

Hummmm...I don't understand what's wrong with the OS...I mean, if it has
hooks to run all the hardware avilable one plans to use, and it is stable,
and applications can share memory, then what are these lacking "features
and functions?" Are you talking about included Quick-time players and
all that junk that comes with a new mac? Well...that's not an OS, that's
an APPLICATION! You can get similar applications for Atari as well!

Can TOS run MODERN SOFTWARE???
YES, it can!
Are most Atari Machines capable of running "MODERN SOFTWARE",
An ST, not really...but it has nothing to do with the OS!
It's only an 8mhz machine, usually maxed at 4meg of RAM!
```

The least you could do is spell it correctly.

>So how will the unchanged Hades compete with Rhasopy running on top of a >$1000 PPC box running at least 300mhz?

You do not understand the concept of Hades. This is not surprising after reading your posts. Hades is designed for Atari users whose tasks require as much power, speed and flexibility as possible for their software and operating system of choice. These users are not interested in switching to another platform to get a marginal performance increase, for several reasons..

A) They have large sums of money tied up in their software, which won't run under Rhapsody. Buying Mac software to replace the apps they currently own would be very expensive and time consuming.

B) They have large sums of money tied up in training their staff (or themselves, time is money) on operating their systems and the interface. Retraining would be very expensive and time consuming.

C) They have large sums of money tied up in training their staff (or themselves, time is money) on their software of choice. Retraining would be very expensive and time consuming.

D) In some cases, there is not equivalent software available on the Mac. A PC would be a better choice for some of these people... and that is another nightmare. In this case, they would need to hire an IS person or department. Big bucks again.

E) They have thousands of man hours invested in creating files that would not be useable on a Mac, or a PC and this work would have to be redone from scratch resulting in more expense and time spent doing so.

If you add up all of the costs for these companies or self employed individuals to switch platforms and compare it to the costs involved in upgrading their aging TOS systems, it only makes financial sense for many of these companies or individuals to choose the Hades route.

Admittedly, some scenarios may suggest that some of these companies or individuals are better served by switching platforms. With the same argument, I can show you scenarios where it is beneficial for some Mac users to switch to Hades. Not only can I show you the scenario, you can go visit them in California....

Admittedly, the Hades is not the best choice of hardware for the casual Atari user, just like the top of the line in the Mac product range is not suitable for a casual Mac user on a budget.

Now, I am tiring of your false and defamatory remarks in regards to our product.

Kindly govern yourself accordingly.

All the best,

Chris J, Krowchuk

Peter,

Honestly, you are making a statement that you cannot back up with any facts at all. A statement like "not up to par with PageMaker and Quark" is very misleading. Page and Quark may be the de-facto standard in pre-press offices in North America, but that in itself does not make it better, or worse.

Calamus SL is (honestly, I would not kid you here) a better product in terms of output, expandibility and raw power and speed. Even when run on the fastest Mac or PC under TOS-OS emulation, Calamus SL outperforms Quark or Page and even Calamus Publisher on Win NT which was rated as the best 32bit Win application ever released. It is the 'only' true WYSIWYG publishing package on the market. Sure, Quark and Page claim WYSIWYG, but they are not true WYSIWYG because they use PostScript and PostScript by it's very nature is not WYSIWYG. Calamus SL's Raster engine is unequalled by anything on the market today.

Please be a little more careful in what you say about products you clearly know little or nothing about.

All the best,

What a bunch of bull... Whatever. Sounds like you do not want to lose
this captive market.

> A) They have large sums of money tied up in their software, which won't run
> under Rhapsody. Buying Mac software to replace the apps they currently own
> would be very expensive and time consuming.

But they have 3 grand for a Hades? Lets see...A very capable PowerMac
clone cost $1000.. So you have 2 grand left for software.

> B) They have large sums of money tied up in training their staff (or
> themselves, time is money) on operating their systems and the interface.

You mean that you need paid training to use TOS?

> C) They have large sums of money tied up in training their staff (or
> themselves, time is money) on their software of choice. Retraining would be

Very true...I can stand behind the above statement. That the hidden cost
for Wintel is the IS factor.

Hopefully Rhasopy will change things. Even a school teacher could deploy
and maintain a Rhasopy server..

> E) They have thousands of man hours invested in creating files that would
> not be useable on a Mac, or a PC and this work would have to be redone from

Another reason to switch.. Thats a TOS limitation. I wonder how your
clients can share infromation with their clinets in a Wintel dominated
world. At least the Macs can speak Wintel files..

> If you add up all of the costs for these companies or self employed
> individuals to switch platforms and compare it to the costs involved in

Thats a bunch of bull. Pentium and PowerMac systems come with a ton of
software included(MS Office) which are upto 2/3rds the price of a Hades
setup..

Yes but.. The lowest end PowerMac beats up a Hades. The Hades is not
considered top of line today..

How can you call a Hades high end? I don't see how it can be soo
expensive? Don't you want to expand the userbase, so you can design the
next Hades?

> Now, I am tiring of your false and defamatory remarks in regards to our

No...Four megs is sufficient to run IE with all features.. You must be
thinking of Cab..

Seriously..This is a departure for MS and finally doing software right.
I gues this has to do with MS having dedicated Mac developers in their
Mac R&D lab in San Jose and doing a Mac specific IE instead of a bloated
Wintel port

> I don't like CAB for online work, since it doesn't have builtin HTTP
> support, which disables progressive rendering of pages.

Apple isn't hyping it like they did with Copland.. None of the Apple
Execs discussed Rhasopy in public..

Rhasopy is real.. Check out Mac the Knife on Macweek.com online for the
photo gallery..

> Yes, just look at all the choice we have today. Not much, compared to the

Why are thet bad browsers?

There is already a Rhasopy specific web browser call Omni Page. You can
read all about it at macosrumors.com/

Supposely shames the ones from Netscape and MS..

Because Wall Street is the final arbiter. In their eyes when they
announced an investment of $150 million in Apple plus their committment
to bring out new versions of Office, MS legitimized the Mac platform in
the eyes of the corporate and the public

>
> How positive was the mindshare of the Apple users that booed Steve Jobs

> thrilled with this development? Hmm...?

No..The ones who are against it are in denial..

> >It wasn't a cash infusion. MS bought Apple stock on the open market.
> >Apple has plenty of cash for now.
>
> So are you saying that Apple won't see that money?

The shares were bought on the open market from sellers..

> >This investment conveyed a message that raised the mindshare about the
> >Mac in positive territiory.
>
> To whom? Thats certainly not the message I got-and others as well...

The press, corporations and the public. Mac corporate buyers at MacWorld
were being pressured to switch over to entirely Wintel. Once the
announcement came the pressure is off. Because MS conveys, that Apple is
to imortant to the market and will stay around..

Did you see the Wall ST reaction? I was sipping coffee when CNBC came on
live from MacWorld with the Apple logo as well a message that Apple's
stock has been put on hold during Job's speach announcing the new
agreement and board..

The die hard Mac folks live in a fanatsy world. Many were skeptical at
first but one the fine print was read that it is a good idea to bury the
hatchet with MS.

A common opinion being expressed is that these board members were part of the problem. Apparently Jobs had a lot to do with their replacement.

Frankly, I think that this deal is more symbolism that substance. $150 million in stock purchases is not chicken feed, but it will not solve Apple's problems. And perhaps there is more here than meets the eye, such as undisclosed amounts going to Apple to settle possible infringement suits.

But in the long run, the main thing may be the psychological effect this has on the low-IQ types who listen to the news. They may now think Microsoft will supply software for the Mac, so the Mac should be considered to be a "legitimate" purchase option. I will bet you that many of this people think MS has not been writing software for the Mac up to this point.

I believe that a lot of the CIS stuff exists at UMICH and also on the
PoolDisk that was produced by Ernest and Bo Schreurs in The Netherlands
about two years ago, but I also see that William Kendrick replied to
your message, so I'm going to look at this reply before commenting
further on UMICH.

Help discovering what all of the 8.3-named files are and getting
descriptions (blurbs) for them written and categorizing them.

Is this a recent copy of their data? I know umich (?) has a bunch of stuff
from CIS but I know they don't have everything. I remember their being tons
of stuff more when I last used CIS in the 80's. When the new version of 1030
Express came out. In fact, there should be a program of mine up there that
converts version 2 to version 3 phone files.

If you want some help I could lend some time to it. I'm not sure how you
want to do it though. A large tar ball of some stuff would work for me.
(Guess I should get the Unix Atari emulator up and running...)

OK, OK ... something convinced me to grab the files before
they vanish, so I now have all the files from section 11 and
12 of the CI$ ATARICOMPUTING forum, though I have to kludge them
together into one place (section 11 was grabbed with Qmodem at work,
while section 12 was grabbed with Tapcis, a much smarter CI$ aware program).
I will have to write a parsing program to split out the file descriptions
into the individual description for each file that Tapcis does to get them
consistant, but that shouldn't be too much trouble. 1800 files in section 12,
I haven't yet looked into the section 11 stuff yet.

The paper listing I had at work is definitely gone ... I hope I have
the original files on a 6809 Flex disk someplace.

Thank you thank you thank you thank you thank you!!

How large is it in total? I have a friend that has a few programs that were not released, and I think he'd like to add them.

I got a bare-bones 520ST about a year ago, with one boot floppy, no manuals and no HD. Due to the scarcity of help and software, I'm on the verge of selling the system. Can anybody provide me with:

* The most modern OS that will work well on a 520ST. Remember, I don't have a hard drive!

* A decent terminal program so I can get the ST on the net (Zmodem download would be needed).

* Manuals? Any old pro out there who no longer needs to refer to their 520 ST manuals? Even photocopies are welcome.

* Pin-outs and or manual for the color SC1224 Atari monitor.

* Music software for a MIDI keyboard (this is why I got an ST).

Thanks,
Jill

Somewhere in the distant past I used to play around with an ST....I upgraded it to
1 meg and added a hard drive.....Somewhere I reckon I still have lots of
source code....and probably some games.....I dumped the hard drive (sorry) but
I should have some magazines (ATARi User etc...) I will look them out.

I am in Scotland UK. Tell me where you want the stuff sent (I'll pay postage if it doesn't
cost an arm and a leg).

I can be found at Compuserve 101233,1641
or
witurne@ibm.net

Give me a call

Jill,
I was an avid Atari 8-bit and 16-bit user for many years until the IBM units became viable tools in engineering. My father and father-in-law both had Atari's but they are both heavily into IBM now. Guess what they recently did? They dumped all the Atari 8-bit and 16-bit stuff back in my lap. I have it all in cartons in my garage. The 520ST was upgraded to 1mb Ram and there is also a 20Mb Hard Drive. I used to read and keep all info on my machines, so its all probably in the boxes. I'll take a look for you.
A friend of mine bought his son a 2Mb unit with a hard drive and he used it strictly for midi. At that time (1988), midi and its applications were much cheaper to accomplish on the Atari ST than on the Macintosh.
Leave me some mail if you are interested.
Mike

Amazing isn't it? That an entire platform's files fits into a ZIP disk....

Is this the A8 files only, or 16bit too? Is this every file uploaded to CIS _ever_, or do they remove old files after some time?

> I would really like to get a single file or three to simplify
> and speed backing up.

Perhaps I can help? I have a ZIPper on my Mac that I find to be much more reliable than the ones on the PC, notably on large files like this.

You might want to find some way to add a hard drive and some extra RAM,
unless of course it already has been upgraded. I've been told that not too
many MIDI programs will run with less than 512k of RAM.

HO>* The most modern OS that will work well on a 520ST. Remember, I don't
HO> have a hard drive!

You'll want TOS 1.04 then, or a TOS 2.06 upgrade board. If you've got
TOS 1.02 in ROM then you can probably use that without too many problems.
I have all these years without too much fuss. Forget about TOS 1.00,
especially if it's of the variety loaded from disk. If you want to add
a more useable environment try Terradesk 1.40 out. It lets you do much more
than the conventional GEM desktop. NEODESK 4.05 is an even better desktop
replacement program, but for that I would really recommend having a
hard disk.

HO>* A decent terminal program so I can get the ST on the net (Zmodem
HO>download would be needed).

ANSITerm does a nice job. Freeze Dried Terminal works well too.

HO>* Music software for a MIDI keyboard (this is why I got an ST).

Hope this helps...

A8 only .. libs 11 and 12 ... plus the St Transformer files from lib 5.
If I dig out an ancient CI$ listing from the old 8 bit forum, I should
have an idea if things were deleted .. I suspect yes, but perhaps someone
more active in the CI$ forums would know now.

>
>> I would really like to get a single file or three to simplify

Did, done .. single Pkzip file .. 24 megs or so. Pkzip bombed on my
system (choked perhaps) possibly due to my own system memory constrants,
but the file was there deleted, so I undeleted it and it looks valid
(passes the Pkzip -t).

```
Announcing the First Annual Vintage Computer Festival!
------------------------------------------------------

Mark your calendars! The first ever public celebration of vintage
computers will take place at the Alameda County Fairgrounds in Pleasanton,
California this October 25th and 26th.

The Vintage Computer Festival (VCF) is the first event of its kind
anywhere in the world. This two day festival will feature presentations
and workshops by notable computer industry figures and vintage computer
hobbyists. There will also be an on-site, hands-on vintage computer
exhibition. Experiment with the classic computers of yesteryear!

Each year a computer from the past is placed in the Vintage Computer
Spotlight. This year we focus on the Apple ][. To celebrate the 20th
anniversary of this classic, we will be giving away an original Apple ][
personal computer! Each person who attends the VCF is automatically
entered into the drawing!

Both seasoned and new computer collectors will enjoy workshops and
panels to share ideas and learn about finding, acquiring, restoring,
and enjoying vintage computers.

The VCF also features the Vintage Computer Flea Market. Find those old
computers, peripherals, manuals, and programs you've been looking for!
The flea market is the ideal way for new comers to the field to start
their own collection or for seasoned collectors to add to their existing
stash.

Celebrate the good old days of computing! Attend the First Annual Vintage
Computer Festival!!!

When: October 25-26th, 9:00AM - 5:00PM daily

Where: Alameda County Fairgrounds, Pleasanton, California

Admission: Pre-registered ($SAVE$)

Individual: $15
Family: $24 (two adults and four children)

Benefits of pre-registration include:

o Access to speakers, workshops, flea market and
exhibition
o Pre-paid parking

To pre-register, send a check or money order to:
```

Vintage Computer Festival
4275-29 Rosewood Drive #161
Pleasanton, California 94588

Please make checks payable to "Vintage Computer Festival"

At-the-door

o Speakers, Workshops, Flea Market and Exhibition

Individual: $10.00
Family: $16.00

o Flea Market and Exhibition only

Individual: $5.00
Family: $10.00

Please note: "At-the-door" rate is for a one day pass
only and does not include parking.

For more information including the latest list of speakers and workshops
please check out:

http://www.siconic.com/vcf

or send e-mail to:

mailto:vcf@siconic.com

SEE YOU AT THE VINTAGE COMPUTER FESTIVAL!!!

Don't be silly ;-) We all try to be very helpful, and there is plenty of
software on the net!

> * The most modern OS that will work well on a 520ST. Remember, I don't
> have a hard drive!

Remember, the OS is in ROM, so upgrading TOS means replacing the ROM
chips. The latest version that will work on your ST is 2.06. There are
upgrade boards available that allow you to switch between the original
TOS and the new one, which is useful for compatibility with older games.

Without a HD, and with only 512K of RAM, I would forget about MagiC,
Geneva, Mint, etc... which are modern multitasking systems.

>
> * A decent terminal program so I can get the ST on the net (Zmodem
> download would be needed).

There are several ZModem capable terminal programs (I'm not a
specialist, but take a look at a few FTP sites), TCP/IP PPP and SLIP
connection is now available with STinG, Web browsing can be done with
CAB (you'll need at least a meg though), Usenet and email and FTP can be
done with Newsie... There is other stuff too.

>
> * Manuals? Any old pro out there who no longer needs to refer to their
> 520 ST manuals? Even photocopies are welcome.

The manuals won't tell you more than how to copy a file, format a disk
and save the desktop. I'm sure you can figure that sort of stuff on your
own. There's a chapter about that in the Quick FAQ (see below).

>
> * Pin-outs and or manual for the color SC1224 Atari monitor.

Pinouts can be found here:

http://www.teleport.com/~atari/STinternals.htm#MONITORPORT

>
> * Music software for a MIDI keyboard (this is why I got an ST).
>

Just like on other platforms, the best ones are commercial, Cubase,
Notator, Logic... you often see people selling second hand copies on
this group.

Otherwise, Alchemie or Sweet Sixteen are shareware seqencers that can be
found on the net. I don't have the exact addresses, but they can be
found.

> Thanks,
> Jill

I suggest you take a serious look at my Quick FAQ (the address is in my
.sig). The ST can probably fulfill most of your needs. Don't give up!

Most of the good MIDI stuff needs 1 meg to run. Also you need the SM124
mono monitor for most of them. Chances are the TOS in your 520 is the
dreaded 1.0, and that the floppy drive is only single sided.

best of luck with it.

JG

It shouldn't crash because of lack of memory.MS-DOS programmes must ask the OS
to use memory.It's up to MS-DOS to tell it where the free memory is.
Actually,this is how the Atari works too.
PKZIP should just get a error from MS-DOS and exit.And PKZIP (2.04g) uses XMS
memory.(and EMS,but nobody uses that anymore)

How much MS-DOS and XMS memory do you have?

Actually,this is how the Atari works too.

And if the requested amount of memory is not available then the OS will say so.
And of course every programmer always
- checks the result of every system call
- writes appropriate code to deal with the case that the system call failed
- actually tests all of these special cases to see that nothing bad happens.

And I have a claim on some Martian real estate that you really should buy.

1290. ATARI-ST emulation, GEMUL8R.INI

Newsgroup: comp.sys.atari.advocacy
Date: 1997-09-15 00:00:00 UTC
From: Rolf Hemmerling <hemmerling@geocities.com>
Message-ID: <341D1094.1883431D@geocities.com>
Source record: 5749
Cross-posted to: comp.emulators.misc,comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.advocacy,de.comp.sys.st,fr.comp.sys.atari,maus.sys.atari.hardware,maus.sys.atari.talk,maus.midi,fido.ger.atari,comp.emulators.misc

I would like to use the free ATARI-ST emulation "GEMULATOR CLASSIC"
(Version 3.6, not GEMULATOR 96 !!) for MSDOS computers so that I may use
a TOS.IMG on harddisk instead of the EPROM card. In my AT-486 PC, there
is no slot available anymore (I may prove by photo!), so...

I just downloaded the GEMULATOR CLASSIC executable file, and I got a
GEMUL8R.INI file from a friendly newsgroup reader. This file is
accepted by GEMULATOR CLASSIC, as I may see if I change a parameter for
the RAM size. But: The sender of this initialisation file did not know
exactly the syntax of the parameter to let the GEMULATOR CLASSIC take a
TOS.IMG file and to avoid the scan of the ports.

This does not work in the GEMUL8R.INI file, currently

magic=c:\tos.img
magic c:\tos.img
(so with and without the "=", probably without the "=" is right)

magic c:\magic_pc.os
(from the MAGIC-PC demo)

So what is the keyword (or which TOS version works right), so that no
scan is done by GEMULATOR CLASSIC ? In fact, although I don't own an
EPROM card, GEMULATOR CLASSIC insists on that there is a EPROM card at
port $240 !!!

On their GEMULATOR CLASSIC download page, they say
>Gemulator Classic supports all the same operating systems as Gemulator
> 96: .., TOS 1.0 on disk (the original 520ST disk based TOS) and TOS
> 1.4 on disk (the 1988 developer release), and MagiC 2, MagiC 4 and
> MagiC 5 on disk including versions of MagiC that come with MagiC PC
> and the MagiC PC demo
So it should work, but it does not yet.
The GEMULATOR 96 demo finds the ROM images, properly.
Is there anything special with the TOS on disk (so that these versions
may be recognized, but no other ?)

I would be interested to get all "utilities" and online documentation
for the GEMULATOR CLASSIC, for free.

Look at my homepage about ATARI and free emulators
http://home.pages.de/~h/atari.html

I got all TOS versions from
http://www.fatal-design.com/desktop/

I understand that the MAGIC_PC.OS image needs the C:\GEMSYS folder from the original demo version of MAGIC copied to my local drive C:, as it does with the GEMULATOR 96 demo.

Sincerely
Rolf

In english:
I am looking for tools (and docs) for the free ATARI-ST emulation "GEMULATOR CLASSIC" version 3.6. Especially a configuration software for the GEMUL8R.INI file and infos about the options, any tools to create virtual disk image files, infos how I may include a plain MSDOS drive (2 GByte MSDOS partition on my big PC) for GEMUL8R.., the special keyboard functions mapping, maybe from an earlier demo version (the current free version just consists of the GEMUL8R.EXE file.

I still need the software program to generate the virtual disks (and to copy to and from them), and any configuration option, infos and software for partitioning harddisks to include a plain drive (C: as C:). My MSDOS partition is 2 GByte (and there is a hint in the online infos, that a plus for the GEMULATOR 96 is the "Support for very large hard disk partitions, CD-ROMs, and network drive" and "Earlier versions of Gemulator required setting up separate Atari ST hard disk partitions, and while this is still an option it is no longer required.". So probably I don't have true harddisk support on my big PC on my MSDOS partition !

I got two GEMUL8R.INI files from a friendly newsgroup readers, but.. if You got another rather-complete "big" GEMUL8R.INI file with comments.. I wuold be interested in it, still.

Please answer me personally too !

Auf Deutsch:
Ich suche noch Hilfsprogramme (und Dokumentation) f&#65533;r die freie ATARI-ST Emulation "GEMULATOR CLASSIC" Version 3.6. Besonders Konfigurations-Software f&#65533;r die Datei GEMUL8R.INI und Infos &#65533;ber die Optionen, irgendwelche Programme zum Generieren von virtuellen Disk-Image Dateien f&#65533;r GEMUL8R, Infos wie ich reine MSDOS Laufwerke einf&#65533;ge (2 GByte MSDOS Partition auf meinem gro&#65533;en PC), die Tastaturbelegung f&#65533;r spezielle Funktionen.. vielleicht von einer fr&#65533;heren Demo-Version (die aktuelle freie Version besteht nur aus der Datei GEMUL8R.EXE).

Ich brauche noch das Software-Programm um die virtuellen Disks zu generieren (und von und auf sie zu kopieren), und irgendwelche Konfigurationsoptionen, Infos und Partitionier-Programme um ganze Laufwerke einzuf&#65533;gen (C: als C:). Meine MSDOS Partition ist 2 GByte (und es war ein Hinweis in den Online-Infos, da&#65533; einer der Pluspunkte f&#65533;r den GEMULATOR 96 ist "Support for very large hard disk partitions, CD-ROMs,

and network drive" und "Earlier versions of Gemulator required setting up separate Atari ST hard disk partitions, and while this is still an option it is no longer required."). So habe ich wahrscheinlich keine wahre Harddisk-Unterst&#65533;tzung auf meinem gro&#65533;en PC auf meiner MSDOS Partition !

Ich habe zwei GEMUL8R.INI Dateien von zwei freundlichen Newsgroup-Lesern erhalten, aber.. wenn Ihr noch eine ziemlich-komplette, kommentierte, "gro&#65533;e" GEMUL8R.INI habt.. h&#65533;tte ich immer noch Interesse.

Bitte antwortet mir auf jeden Fall auch pers&#65533;nlich !

Tschau / Sincerely
Rolf

I read the last postings in this thread and could not resist to try it
out myself. The posted ini-file worked fine after I changed the name of
the TOS-Image (I put the TOS-Image in the same directory as the
Gemulator so there was no need to specify a pathname). Gemulators
starts, reads the ini-file, scans the port (don't know how to avoid
this) and then runs with the TOS from the file!
Now this is where the problems start when working under Windows NT.
Gemulator tries to access the disk and the COM-Ports directly which is
blocked by NT. It also tends to "hang" after a while.

I am using a Janus card in my machine. I found OS/2 to be much better
for this purpose. Just wanted to mention how I solved this problem.

I just assume Gemulator will run fine under OS/2 (or Windows 95) as
well.

Have fun.

Ten years ago, you could have bought 36 shares of Microsoft for 28.01 per share. That $1,008.36 would be $198,126.00 now. What if you had another chance to invest in a company with that much potential? If you leave your email at "http://theprofitcenter.net/stock" you could get the chance to consider an Internet investment with tremendous potential.

1298. ATARI-ST emulation, GEMUL8R.INI

Newsgroup: comp.sys.atari.advocacy
Date: 1997-09-17 00:00:00 UTC
From: Rolf Hemmerling <hemmerling@geocities.com>
Message-ID: <341F833C.648C0BB9@geocities.com>
Source record: 5757
Cross-posted to: comp.emulators.misc,comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.advocacy,de.comp.sys.st,fr.comp.sys.atari,maus.sys.atari.hardware,maus.sys.atari.talk,maus.midi,fido.ger.atari,comp.emulators.misc

In english:
I got now the free ATARI-ST emulation "GEMULATOR CLASSIC" version 3.6
up and running, see report with tricks and tips on my ATARI homepage
http://home.pages.de/~h/atari.html

One last question:
The only way to copy from and to virtual disks of GEMULATOR classic is
either running GEMULATOR CLASSIC and copying to and from floppy disk or
running the later, not latest GEMULATOR 96 V4.5 demo and copying to and
from the real MSDOS harddisk partititon (even if this partition has a
size of 2 GByte, as it is usual today)

So please users/buyers of GEMULATOR CLASSIC, what is the maximum
partition size of MSDOS partitions that GEMULATOR classic can handle
for direct disk access ? Is there a 32 MB partition limit of ATARI-TOS
for MSDOS partitions ?

Please answer me personally too !

Auf Deutsch:
Ich habe die freie ATARI-ST Emulation "GEMULATOR CLASSIC" Version 3.6
nun zum Laufen bekommen, siehe meinen Bericht mit Tricks und Tips auf
meiner ATARI Homepage
http://home.pages.de/~h/atari.html

Eine letzte Frage:
Die einzige Art und Weise, wie man auf die und von den virtuellen
Harddisks kopiert ist, entweder GEMULATOR CLASSIC laufen lassen und
�ber Floppies zu kopieren, oder die neuere (aber nicht neueste)
GEMULATOR 96 V4.5 Demo laufen zu lassen, und dort dann auf und von der
realen MSDOS Partition zu kopieren.

So liebe Nutzer/K�ufer von GEMULATOR CLASSIC, was ist die maximale
Partitionsgr��e von MSDOS Partitionen, mit denen GEMULATOR CLASSIC
zum direkten Dateizugriff umgehen kann ? Gibt es das 32 MByte Limit
von ATARI-TOS f�r MSDOS-Partitionen ?

Bitte antwortet mir auf jeden Fall auch pers�nlich !

Tschau / Sincerely
Rolf

WinNT does not allow User level applications to directly access the hardware.
This is why WinNT is more stable than Win95. I don't know if DirectX for NT
will help, it still needs to go through the IO manager but it is suppose to be
more resistance to direct hardware access by applications.

I'm looking to buy an old Atari pong machine, the home version. Small black box, 2 paddle controllers, its sole purpose was to play pong. If anyone can either tell me where I can find one, has one to sell, or can at least give me some model/system number of this thing, I would be VERY appreciative. Thanks a lot!

Hi Emmett,

Sorry, don't have any info for you, just curious, I owned De Re Atari ages ago, for my 8-bitters, is that the one you're looking for? Or was one also done for the ST's? I'd like to know about it myself, since I have recently been doing a little puttering around on a 1200XL.

Well there has to be something for memory.Or else PKZIP would just keep eating
up memory until it crashed.I've run PKZIP on 1MB PCs before with no errors.
PKZIP was writen long beofre there were 16MB PCs.

Just read in Mac World today that now Mac User is included:). Sounds pretty familiar if your an Atari magazine subscriber from the past:).

Also looks like Jobs is cutting off his noise. I'll bet all the Mac clone users feel just like PC users now. Left in the dust....

Now, someone tell me how great this is, and where I can get a Mac clone now that will be supported in the next few years?:).

Anyway, I look for a mile long post on what a good deal it would be to purchase a Mac clone at this time. But WTF, this is an advocacy group:).

(For those that don't know what I'm talking about, Apple is drastically changing the way it licenses its O/S. From the report, most, if not all of the clone manufactures are phasing out their clone lines shortly, except for some of the low end machines destined for the far east).

Falcon still going strong.

Mike

I think that there must be some pocket filling going on before
the ship strikes the icepack:).

One thing about TOS machines, I never got the sinking feeling in the
pit of my stomach when a machine newer than mine was released. All
I knew was I wanted it, and would keep the current one as well. These
PC and Mac users must really have to keep the Pink liquids down to
ease the stress:).

Not trimming, cause I missed the in-between posts, (but found them on DejaNews).

I speculate that PKZIP crashed in parsing the file names for some sort
of final directory totals or something ... who knows exactly, but
not many programs can handle that many individual files (about 6300).
It may just have been a conflict with QEMM7.5 .. I do have to use
the PKZIP switch to turn off 32 bit DPMI usage as a mater of course.

I mostly wanted the PkZip file as a means to save redundant backups easily
(it takes too long to do anything with 6300 files individually).
I've got it done, and have the files individually on the Zip disk.

Agenda for the meeting of the Toronto Atari Federation (TAF) for
the evening of October 15th, 1997:

we at TAF are proud to present an evening with Nima Montasser of HOMA
Systems House - and we're sure it's an evening you're not going to
forget!

HOMA is an Ottawa-based hardware and software house for
Atari-related products. Amongst their many products are software drivers
for popular brands of SCSI flatbed scanners (including Hewlett-Packard,
Mustek and Microtek), the NOVA graphics cards (for enhanced pallette and
resolutions for TTs, Falcons and STs), the PIXART graphics program for
designing your own artwork, and their CD software drivers for accessing
information off a number of popular PC CD-ROMs (including the INFOPEDIA
2, WORLD WAR 2 and BODYWORKS titles).

Nima has a full evening planned for demonstrations of his products,
and he'll also have them for sale at the meeting. So if you've ever
wondered how to get your Atari doing what PC and Macintosh users take
for granted, this meeting is for you! See you there!

TORONTO ATARI FEDERATION User Group meetings are held on the Third
Wednesday of the Month in the North York Memorial Community Hall on the
Lower (or Concourse) Level of the North York City Centre Library at 5110
Yonge St. at Parkhome Ave. Parking garage inside the complex. Those
using public transport can take the TTC's Yonge-University-Spadina line
to North York Centre Station. Meetings start 7:30 PM, $2.00 to
non-members. Membership is $35 CDN a year, and includes a subscription
to the club newsletter PHOENIX and full use of the TAF Online BBS.

>get to install it, and where can I download it ?
>
>Thank You.

There are several atari sites that are still good. The ftp.umich.atari
(? I am not sure if this is the right adress??) site has a file called
starter.tos at the end of its directory, that has a bunch of simple archivers,
of several styles. Get it with FTP, copy it to a dos 720K disk, and load
it into his ST. It'll read OK. Then run it, and it is a self-extracting a
rchive itself. That'll get him started, till he get more full featured
archivers.

There are Atari versions of LHArc, Zoo,Zip,ARC, and sever other programs
that are directly compatable with the versions for other systems. They
should be available from any Atari Archive.

```
Announcing the First Annual Vintage Computer Festival!
------------------------------------------------------

-----------------------------------------
MORE SPEAKERS, COMPUTERS AND VENDORS ADDED!
SEE WEB PAGES FOR MORE INFORMATION!

http://www.siconic.com/vcf
-----------------------------------------

Mark your calendars! The first ever public celebration of vintage
computers will take place at the Alameda County Fairgrounds in Pleasanton,
California this October 25th and 26th.

The Vintage Computer Festival (VCF) is the first event of its kind
anywhere in the world. This two day festival will feature presentations
and workshops by notable computer industry figures and vintage computer
hobbyists. There will also be an on-site, hands-on vintage computer
exhibition. Experiment with the classic computers of yesteryear!

Each year a computer from the past is placed in the Vintage Computer
Spotlight. This year we focus on the Apple ][. To celebrate the 20th
anniversary of this classic,

WE WILL BE GIVING AWAY AN ORIGINAL APPLE ][ PERSONAL COMPUTER!

Each person who attends the VCF is automatically entered into the drawing!

Both seasoned and new computer collectors will enjoy workshops and
panels to share ideas and learn about finding, acquiring, restoring,
and enjoying vintage computers. Visit http://www.siconic.com/vcf for an
up to date list of speakers and workshops.

The VCF also features the Vintage Computer Flea Market. Find those old
computers, peripherals, manuals, and programs you've been looking for!
The flea market is the ideal way for new comers to the field to start
their own collection or for seasoned collectors to add to their existing
stash.

Celebrate the good old days of computing! Attend the First Annual Vintage
Computer Festival!!!

When: October 25-26th, 9:00AM - 5:00PM daily

Where: Alameda County Fairgrounds, Pleasanton, California

Admission: Pre-registered ($SAVE$)
```

Individual: $15
Family: $24 (two adults and four children)

Benefits of pre-registration include:

o Access to speakers, workshops, flea market and
exhibition
o Pre-paid parking

To pre-register, send a check or money order to:

Vintage Computer Festival
4275-29 Rosewood Drive #161
Pleasanton, California 94588

Please make checks payable to "Vintage Computer Festival"

Print and mail the handy form at the end of this posting
for easy pre-registration!

At-the-door

o Speakers, Workshops, Flea Market and Exhibition

Individual: $10.00
Family: $16.00

o Flea Market and Exhibition only

Individual: $5.00
Family: $10.00

Please note: "At-the-door" rate is for a one day pass
only and does not include parking.

For more information including the latest list of speakers and workshops
please check out:

http://www.siconic.com/vcf

or send e-mail to:

mailto:vcf@siconic.com

If you are interested in vending at the Vintage Computer Festival, please
send e-mail to the above address.

SEE YOU AT THE VINTAGE COMPUTER FESTIVAL!!!

Well sports fans, its sinclap here.. Nothing ever changes when you have been gone.

Why does the Hades 040/060(Does Motorola still make these processors?) still cost soo much?

MacTel(mactel.com) sells a PPC 603e/200mhz system for $999 with 14' monitor. Price includes 1.2 gigs, 16 meg, 8x CD and so on.. Uses a Motorola Tanzian motherboard..

So much for Power with out the price!

Rise up and just say no to high prices on new 040/060 systems..

well, now that TIFKAS (the Idiot Forever Known As Sinclap) is back,
things may liven up again here! Can you say "open season", boys and
girls? Hopefully we'll be entertained yet again by TIFKAS' rants about
"Atari Jihads" who are "out to get him" before one too many embarassing
questions leads him to once again skip town with his tail between his
legs.....

>

which, of course, will be PHASED OUT and NON-SUPPORTED at the end of
this year, thanks to Steve "Arrogant Bonehead (TIFKAS' own words)" Jobs
and his moves to squash any Macintosh clones from the marketplace. Which
of course, will probably mean the doom of the Macintosh system in a few
short years.

>
>So much for Power with out the price!

Then I guess you haven't heard about the Milan, weinerhead! :

68040/66mHz
PS/2 EDO memory from 1-512 mB
up to four EIDE drives
four PCI slots
three ISA slots
modified TOS 3.06 operating system

a starter system (8mB, 540mB IDE drive, graphic card, keyboard and
mouse) starts at an estimated $1000 US. Yes, you read that right. Read
em' and weep, Rush!

Come to think of it, seems he's even proven wrong with his "nothing
ever changes" rant at the beginning of his latest steaming pile of
brain droppings.....

>
>Rise up and just say no to high prices on new 040/060 systems..

just say NO to LIES and WRONG INFORMATION from a Rush Limbaugh
wannabe who has been proven to do nothing but trot out the same tired
old chestnuts and hot air despite being constantly refuted by those
Atarians in the know. Anyone who makes these mistakes obviously will
make the same sort of inflated and wrong-headed claims about the
Macintosh as well - a sad state of affairs, as the Mac is still an
excellent platform. It doesn't need boneheads like Steve Jobs and TIFKAS
to further run it into the ground.....

Come to think about it, why when I go into the Mac forums on Usenet
that I don't see TIFKAS posting or involved with discussions on new Mac
hardware and software? Where is his presence on comp.sys.mac or
comp.sys.mac.advocacy, where his knowledge on all things Mac would be
an asset - or is it that that "knowledge", when placed alongside those
of REAL Mac advocates, who don't resort to using broad exaggerations
and outright untruths, would turn him into an onion ring in the space
of ten seconds? :)

Care to answer that, TIFKAS? Hey, is that a car I hear idling in
the driveway? :)

>
>Peter
>Apple Power Rep - Iowa

soon to be a janitor for David Letterman's mom......
>
>--------------------==== Posted via Deja News ====-----------------------
> http://www.dejanews.com/ Search, Read, Post to Usenet

what's wrong, TIFKAS? Can't even get a handle on using a simple
USENET client program for your Macintosh? Sounds suspiciously either
like "inadequate web tools" (unlikely) or "don't have a system able to
handle Netscape Communicator" (more likely) or "too lazy/doesn't have
two rocks to rub together for brains to configure such a program " (bingo).

BTW, DejaNews makes an excellent search engine for searching out
all of TIFKAS' most embarassing moments. Relive those exciting moments
when Sinclap had to hop around town on one foot due to the other one
firmly wedged in his mouth!

Surprised yet still that you're not using the Mac version of IE4,
which you were ranting about a few months ago - or has Janet Reno thrown
a monkey wrench into Apple's "Deal With The Devil" with Bi66 6ates?

Atari ST owners know, from bitter experience, how quickly developers drop support, like a hot potato, from an architecture for which new machines are no longer being manufactured.

Many Macintosh users, though, don't seem to realize how late the hour is, and how serious the problem.

John Savard

So what developers have dropped support? Have
you seen the list for Rhasopy support and Rhasopy
apps that are available to beta users?

And which new machines are no longer
manufactured? When I set up a 6500 demo machine
at a Sears store the other day, the date of
manufacture was October 9, 1997 at 3:05 PM..

My local CompUSA which I service has a separate
Mac dept. Displays with 6 demo models fully
stocked with inventory. The Mac software section
is huge. Two huge back wall sections filled with
Mac games plus three long vertical shelves stuffed
with business productivity, graphics, multimedia
and educational software. It's been very sucessful
and profitable for CompUSA. A fourth or more will
be added in the next week to keep up demand.

>
> Many Macintosh users, though, don't seem to realize how late the hour is,
> and how serious the problem.

And what problem is that? My fear at this moment
is that my stores will run out Mac inventory in the
next two weeks unless replenished on a weekly
basis. The 6500 line is hot! Sold well last quarter.
And with the rebates that started Friday, my fear
is that Apple will be unable to keep up with 6500
demand. I hope Apple proves me wrong.

Just a few short years? Where I have had heard
this before?

Facts in order:
The clones are still with us. Umax has been
allowed to continue. Umax will focus on the
lowend in the U.S. and Asia markets were Apple is
not a factor. Umax has nice sub $1000 models and
should do well this quarter.

PowerTools has a line of G/Force(?) Mac clones
based upon the PPC G3 aka 750 processors at the
high end($4000+).

Aps(apstech.com) the mailorder outfit in Kansas
City known for their storage business has the M/
Power line of Mac clone systems. You can buy
customized Mac systems from $599 and up. Will
most likely use Umax OEM motherboards in the
future.

MacTel(mactel.com) currently uses the Motorola
motherboards and will most likely switch over to
Umax OEM motherboards in the future has taken the
lowend by storm.

Sells a complete system with monitor for $999 as
described above. I would buy one of these if I was
not issued a PowerBook 3400c/200 from my
company.

Last qaurter Apple had a operating loss of $24
million. However, Apple took a $75 million charge
to buy Power's license(which I did not agree with).
An additional $60 million charge for reserves to be
used for additional future restructuring. During the
quarter, Apple paid a $200 million note. Also,
Apple realized a positive cash flow from
operations of $200 million to be added to their 1.4
billion + cash cow. Did Apple really lose money?

A new 040 box in 1997? I thought Motorola phased
out the 040's already?
They still make 540 mb hd? Just 8 mbs?

> Come to think of it, seems he's even proven wrong with his "nothing

Apple was in the ground without Jobs doing...
I may not agree with Jobs decision on the licensing
issue, but he has done alot of positive decisions
with Apple lately. I wish I could comment further,
but watch out in the comming days, weeks and
months.

Pretty simple Pety. Apple is dumping its line of hardware and going to
start up in the condom business. They found that fucking companies
they have a license agrement with much more profitable.
I have had the opertunity to try several of the new power sludges at
work now, and I must say that the Mac O/S brings all of them to their
knees. What pieces of shit. Pure shit. Slow, slow, slow.
With a Hades 060 being three times as fast as my Afterburner, I can
only image what I would think of the Mac line if I had one to compair.
Why don't you go find a comet to chase?

We're fighting back for Mac! Let's kick Intels ass! hahahahahahhaha

Mike

I guess you didn't hear me the first time - THERE ARE NO MORE
CLONES TO BE MADE. I guess you hadn't heard about Jobs' about face in
allowing clones to be made. Plus there has been absolutely NO reports
in comp.sys.mac and comp.sys.mac.advocacy about any clones continuing to be
made. Plus, that move was one of the reasons why Dataquest, in their
assessment of Apple's recent poor performance, gave them a failing grade.

yes they did! Where do you get your figures from, Never-Never land?
According to the article I have here before me in TORONTO COMPUTES
(just came out yesterday), Apple posted a ONE BILLION DOLLAR LOSS for
the entire fiscal year to September 30th, with revenue falling 30% in
the final quarter, with a net loss of $161 million in that quarter. I'd
say that that is definitely described as "losing money". But then
TIFKAS never lets the facts get in the way of a good troll.

TIFKAS, of course, forgets about one of an Atari's main advantages,
relatively low system overhead in RAM and hard drive space. But then he

has always shown sublime ignorance in how an Atari works. The Milan
certainly can use even more RAM (up to 512mB), and can handle nice big
IDE drives as well, which are optional.

In a pig's eye, TIFKAS. Besides, if you're REALLY pulling down all
this money, why are you still on a freenet and not involved with an ISP

that will allow you to use a proper set of web tools rather than
relying on Dejanews?

I guess news travels by pony express to our
Canadien territory.

Yes there is clones...What part do you not
understand?

Do you want me to post press releases announcing
new Mac clone models?

Umax/SuperMac announced a new C500 model today
called a C500/240 at $1299!
You can get all the info from:
macsurfer.com, macintouch.com
supermac.com/
Also MacTel announced a new sub $1000 system
last Friday. Do you want to see a post of the press
release here?

mactell.com/

Apple did not end the clones!

> yes they did! Where do you get your figures from, Never-Never land?
> According to the article I have here before me in TORONTO COMPUTES

Newspaper articles never account for the finer
details.

About half of Apple's loss was related to the Next
purchase and not a loss from operations. Apple
took a charge on this with cash and stock to the
owners of Next..
Also another 75 million was written off, not a
monetary loss to Apple.
You need to speak to an accountant about finances..

Apple's diclosure documents to the Security
Exchange Commission and a brief from transcripts
of Apple's CFO Fred Anserson's conference call
after the earnings announcement.

Yes Apple did post a one billion loss for the year.
You also have to take into account that they paired
down debt and ended the year with higher cash on
hand than last year.
This is all facts that can be verified. I suggest you
look it up.

What is the current price of the Hades?
Thats what were discussing here. I never
mentioned the Milan.. Competition is good. The
question is who owns one?

In a pig's eye, TIFKAS. Besides, if you're REALLY
pulling down all
> this money, why are you still on a freenet and not involved with an ISP

My company does not have usent access yet. Web
access yes..
Plus I use my freenet account for voicing personal
opinions..

Plus if I were to publish my email address from my
firm with my sig, my voice box will be filled with
foaming from the mouth from the Atari Jihad clan.

Motorola still makes 040 and 060. Nowadays, they are mainly used
in high-precision industrial applications, such as controlling
assembly lines automatons.

Either ways, the PC industry has always been a marginal sideline
for Motorola. Their trade remains large industrial applications,
not the consumer market.

And how much is it REALLY gonna cost Canadian users
to buy one of those, after Mr.CanadaCustoms perform
extortion on interrested purchasers? Beyond $3000 CA !!!

> The Canadian "Hades" is of course the DirecT 40/60;

Which is still WAY overpriced as well. Otherwise, I would buy one.

The "power without the price" approach is really gone, if you're
still an Atari user, these days.... ;-(

Hey guys !

I'm a brasilian Amiga/PC user. My amiga 1200 (loaded)
blew 1 month ago and i bought a pentium...

well... i just tried a ST emulators 10 minutes ago and
i'm in pure ecstasy!!!! the st is just like my amiga...

nice gfx, nice games, nice gui (well, not so nice), but
i'm in love with the ST...

can anyone gimme some help about finding more info
about it ? i want to learn how the st works, his
history, who is who in st history, etc etc etc...

maybe i can even buy a ST !!!

Thanx in advance
Amazin

I did read the latest MacWorld and read about the Umax deal a few
days ago; so I was wrong there. However, the fact that Umax machines
will not be available in North America certainly still gives Apple a
stranglehold on what is available for their users there.

Sorry Ken, that is completely wrong:

I am one of the core CAB beta-testers. MagiC users account for only
one third of our group. Others among our team use straight MultiTOS,
N.AES, XaAES or Geneva.

***

Operasoftware.com wrote:

64-bit filesystems and multi-thread is possible by two Atari OS:
MagiC provides VFAT (version 5.13 & up), while MiNT uses Minix.

As for "decent" processors, the TT and Falcon have a 68030.
Atari clones use an even more advanced 68040 or 68060.

Another approach to using 040/060 is to run MagicMac, which
provides a complete, Atari-compatible, GEM environment/OS
on any Macintosh (running a 68030 or better).

Umax will also target markets in North America
were Apple is weak. Umax will continue to offer
and sell models in the U.S. and it's Canadien
territory as well. Umax has announced new models
in the C500, J700 and S900 line in the last two
weeks.

Bzzzt! Wrong again. Umax machine will continue to
be available in North America. Umax has
strengthen the low end line recently. Plus MacTell,
Powertools and APS also sell Mac clones in the USA
and its Canadien territory.

I sent mail to OperaMagic (A potential web browser) and this is his
reply, and my reply to him:

Helmar Rudolph wrote:
>
> > Here's a logo for you! ;^)
>
> Thanks! :-) But let me ask you one thing: is GEM still developed?

GEM, as such, is not being developed now (it's actualy GEMDOS, based on
Digital Researchs GEM - that was used in early Ventura DTP, etc) But TOS
(The Operating System) is still being developed(though not by Atari),
and there is a multi-tasking AES(Application Environment System) out
called Geneva, and a mutli-tasking multi threaded OS called Magic that
is actively being developed [Actually, Magic has also been ported to Mac
and IBM systems to allow Atari users to use their Atari software on the
Intel CPU with MagicPC, and the Motorola/Apple CPU/RISC with MagicMAC].
As well there is MiNT, (MiNT is Now TOS)which can run MultiTOS, a pre
emptive multitasking OS, and MinixFS for long filenames etc. Under
MiNT, for example, I can run X11 and Chimera for web access, although
only in grayscale ATM. Then there's always Linux for the higher end
Atari's (68030 and up). There are other OS's such as Omen (now called
Oasis)which is multi-system(runs on Mac(CPU or RISC), IBM, and Atari)
and Fenix which is a TOS rewrite, but that is fringe stuff. The fringe
of the fringe if you will :^)

>How many users are out there?

Got me, enough to support the above systems anyway.

>How many are online?

not many on the net, or otherwise. I know in my club (Toronto Atari
Federation)only half the members have modems(about 120) and there are
many Atari users(i.e. 3 musician friends) who are not club members,
and only one has a modem, so I would gather that less than half of Atari
users in my area have modems(whether they belong to the club or not)
BUT that it is inevitable that they will at some point, this is why we
need OperaMagic! for Internet access we have CAB(CrystalAtariBrowser)
w/ propriotory PPPconnect and CAB/STik-STing(TCPstuff),WenSuite in
development, possibly Termite from Oregon Research, and the
MiNT/X11/Chimera solution, but the only one that works for me is
Chimera, and I'd like colour! :^) CAB works also, but the developers
seem to be tieing it to the MagicOS, and I'm not sure I want to go
that route yet.

>How many are willing to pay? Bottom line (as in the case with Linux and my friend Jan who heard the same from me): if you want to have Opera for your OS, go drum up the users. I can't do it for you. If you want it, do it
yourself. Go and promote it. We can then look at it.

We'll have to see, eh? With two access options, and two in the wings, maybe there will not be enough interest in a 5th option, OperaMagic.

As a Mac and Atari user, I can understand the problem. But with the
money and the promesses of Microsoft we can hope the standard will
survive for at least 3 years !

Yes Ken, but that was in 1812 - we could never do that today - all our gun is in Bosnia with our soldier !!!

(Only a small smile at the dedication of 'John Crouton' and his minions to the support of our military)

Yup, that's the way I heard it too - the use of lead paint probably explains the intelligence level of US Presidents - come to think of it probably still higher than that of 'John Cretin' and his bunch !

Apple will have to depart radically from this liscence-buying trend. They are being overprotective again. Microsofts's $$$$ will only last so long.

The MS bought $150 million worth of stock on the open market.

Is Apple being overprotective? PowerTools, APS, Umax/SuperMac and
MacTell make Mac clones today which result in choices. You should worry
about near zero choice in the Tos hardware market. Talk about
overprotecting.

According to press accounts., Apple wl release the new G3 Powermacs that
no tel machine can match well as price points.

>
>We hope.

Microsoft is persistant, which is its biggest strength. They
generally hang on to a product or market segment well past the point
most other companies would give up or consider it a failure.
Consider MS Windows NT. If IBM's OS/2 had similar sales, it would
be called a failure (The proof is that OS/2 *has* similar sales,
and *is* called a failure. Why doesn't this seem to baffle anyone but
me? NT = success, OS/2 = failure, popularity = same?).
Also consider MS Word, a third place product for years, but
Microsoft treated it as a first class product until it became one. You
can argue about other unethical Microsoft marketing practices, but
they wouldn't have anything *to* market if they hadn't been dedicated
to their products first and foremost.
Compare this to Borland's Quattro. When it wasn't an immediate
success within a year, Borland sold it off, and it bounced from company
to company before finally finding a home at Corel - and Borland would
probably love to have a new product as successful as it is now.
Microsoft fails so seldom because it doesn't admit failure (and
whatever Microsoft says is accepted as gospel by most industry press).
However, Microsoft's record is far from perfect. Consider Microsoft
Access - not the database, but the terminal program which died so
thoroughly that its name was reused for a completely unrelated
product.
Also consider the Microsoft Network I, a replacement for the
Internet. Died before it was born (and yet Microsoft still pushed it's
dead carcas out into the world). Consider the Microsoft Network II, a
subscription based Internet content providor service, about half of
which has been shut down. Consider Microsoft's home CD business, which
has been silently wound down.
And most of all, consider Microsoft Bob. Need I say more?
Microsoft does fail, and will fail in the future. It just doesn't

fail that often.
This is also why anyone who predicts the death of OS/2 is stupid.
IBM, apart from the turbulent period when it was asleep and oblivious
to what was going on around it, seldom fails either, because it
persists. As I said, OS/2 is roughly as successful as MS NT (and IBM
gives much better legacy support for old versions).

Well, Petey, tell us about Apples condum business. Did you have to spread your legs very wide to accept the big Gates deal? Your sure are trying to sweeten the sound of what Umax is doing. Do you also know that the C-64 is still being pushed in some parts of the world? The Mac clone market is down the tubes and anyone purchasing one should know that it is just a short term solution. There is nothing good going on at Apple now. Just the big boys trying to salvage what cash they can. It will all be over with in a few years.

Apple Power Rep? What is that? Do you actually have a job now?

Pete has provided much amusement over the last 5 years.

You would think that he could get a life, he has certainly
had to get a bunch of different ISPs as he has had his
privledges revoked so many times.

Even the company I work for has given up on MACs. Their
reasonning was that since we could not get a committment from
Apple management to guarantee support, we needed to ensure
support for our computing environment. The Apple products are
scheduled to be completely replaced over the next 12 months.
I know the several thousand processors my company alone would
have purchased over the next two years would not save Apple,
but extrapolate this worldwide...

It's just as well since no retailers seem to sell Apple
software anymore.

Yes, it would be nice to get rid of netscape: It sending plenty of crap with your messages, vcard, MIME codes. Please configure it for plain ASCII, which is the only acceptable standard on usenet.

As for your request, you need STinG (PPP-TCP/IP stack) and NEwsie (news/mailreader and simple FTP client). You need at least 1Mb and a hardrive is, if not necessary, useful, otherwise you'll have to make 1 disk for establishing the connection (STinG) and the other with newsie. Check out my web page for links.

On the DOD site where I am employed, there must be over 10,000 Macs of different flavors. Last year the word came down that no Apple (or clone) computers will be pruchased for network server purposes. The directive stated that the trend will be toward PC/NT servers. Most people just went out and purchased Silly Graphic or Sun Machines when new servers were required. The DOD has given up on Mac, shouldn't Petey?

You have no idea on the particulars on the agreement between Apple and
MS. MS purchased $150 worth of Apple stock on the open market. What
part do you not understand? Also, Office 98 will be out shortly.
Shaping up to be a nice upgrade since it's all Mac and not a Wintel port.

As for the clones, you need to educate yourself on this matter. Umax has
released three models in the C500, J700 and S900 line in the last month
that augment their current ones. Umax is doing well with their sub $1000
Mac clones in the U.S. MacTel(mactell.com) has released a sub $1000 Mac
OS system for under a grand that includes a monitor. Remember Power with
ou the price...?

PowerTools and APS also have a wide line of clones at various
capabilities and price points..

> Apple Power Rep? What is that? Do you actually have a job now?

I handle the retail accounts such as CompUSA, Best Buy and Sears in Iowa
and Nebraska.

And what support is that? Macs don't need support. Just plug and go..

And look for your IS cost to skyrocket to the stratosphere.

Yea, I don't have to speak educated to understand what those companies
are doing. Selling second rate CPUs to make a buck. All of those Power
without the price machines are runing 603e processors that can't pull
the Mac O/S as far as you have to go to fall on your face. They are the
"ST" of the ninetys.

Subject: MacWorld and MacUser merge
From: 404on040@remove2reply.iwvisp.com (Michael Grove)
Date: 1997/09/24
Message-ID: <60aehc$3t3@news.iwvisp.com>
Newsgroups: comp.sys.atari.advocacy
[More Headers]

Just read in Mac World today that now Mac User is included:). Sounds pretty familiar if your an Atari magazine subscriber from the past:). ------- But...In the last years have risen Mac Home, Mac Addict and Mac Times. Plus the growth of Mac specific web pages. I suggest you check out 'macsurfer.com' for the index. ---------- Also looks like Jobs is cutting off his noise. I'll bet all the Mac clone users feel just like PC users now. Left in the dust.... --------- In what way? And Atari users who were abandoned by Atari!

Now, someone tell me how great this is, and where I can get a Mac clone now that will be supported in the next few years?:).

Runs the Mac OS, doesn't it? What kind of support are you referring to?

Anyway, I look for a mile long post on what a good deal it would be to purchase a Mac clone at this time. But WTF, this is an advocacy group:).

They are...Bargains right now, espicially the Motorola StarMax ones..With five year warranties..

(For those that don't know what I'm talking about, Apple is drastically changing the way it licenses its O/S. From the report, most, if not all of the clone manufactures are phasing out their clone lines shortly, except for some of the low end machines destined for the far east). ------------- PowerTools, APS, MacTell and UMAX make plenty of high end machines with the G3 processors TODAY!

Falcon still going strong.

And than what?

Mike

There is nothing crippled about the 603e processors. The Powermac
6500/225 our lowest end model out performs a Pentium II at 233 clock
speed!

Whats absurb is that a Hades with an antiquated 040 still costs in the
$1000- $2000 range..

As usual you'r talking nonesense.. No surprise here..

I'll break my lurker mode for a second. Apple did also agree to turn over technologies to Microsoft. Also, Office 98 for the Mac will not include Access and will be deficient in one aspect because of this omission.

They did get Bill Gates's stamp of approval with the measly $150 million

That must explain why 6 variations in your user name appears in
my kill file, and this current name will make it 7.

I wonder how many user names you required in the year since
I last read an Atari group.

>
> Thats interesting...My CompUSA and Best Buy's do..

The new CompUSA here in NC says it will not be carrying Apple Products.
Best Buy has a whopping 1/2 row of Apple software compared with 12 rows
of software for Windows machines.
>
> > Brian
>

One would think that an Apple Power Rep would have better things to do
than post Apple is great messages in a news group that:
1) Knows better.
2) Could not care much less about your opinion
3) Is amazed that you even were able to find a person
foolish enough to hire you.

Brian

The new G3's are selling very well along with the PB3400 line, the 6500 and highend as well.

> > Thats interesting...My CompUSA and Best Buy's do..
>
> The new CompUSA here in NC says it will not be carrying Apple Products.

Must not be a CompUSA than. All CompUSA's well..Is this CompUSA a mall store?

Another good comeback.. I see why you spend so much time here, you don't have the creativity to do anything else.

It seems to me that you are the one with a problem.. I have and am happy with my PPC, Wintel, and Atari Falcon machines... but I don't spend my time shouting on the Mac boards about how much better the Falcon is for MIDI (it is).

PERSONAL NOTE: I would like to thank the Internet
community for the opportunity to participate in the following
money making program. This program has allowed me to
quit my full time job and pull the kids out of day care. THANKS!

********** Here's the Opportunity **********

Work from home with your PC distributing free software and
information reports worldwide via e-mail and the Internet.

Our exclusive software, PC-SUPER-MLM, will give you the
information and tools that you need to start your own
Computer Based Business as an Information & Software
Distributor.

Achieve FINANCIAL INDEPENDENCE working from home
with your computer using our proven method.

Our products are INFO-REPORTS that provide valuable
information that helps you to reach FINANCIAL
INDEPENDENCE.

Our products can be easily duplicated and distributed via
on-line. This gives us the ability to market all over the world
with virtually no distribution cost.

THE REPORTS ARE:
1) Understanding The Real Power Of MLM
2) Everything You Need To Know About The Internet
3) Marketing Your Business On-Line
4) Secrets Of The Richest People In The World
5) The Truth About Downline Building Clubs
6) The Guide To The PC-SUPER-MLM System
THE REPORTS COST $5. U.S. EACH.

BEST OF ALL, PC-SUPER-MLM is affordable to anyone,
and it is the easiest, simplest, and most powerful program
you have ever seen.

This program is a proven MONEY MAKER. Your outlay of
$30. U.S. for SIX information reports could return you a
potential $500,000 plus. Your FREE copy of PC-SUPER-MLM
has an on-line manual which will explain how this could be
achieved.

PC-SUPER-MLM can be downloaded from the following site:

http://www.superpsm1.com

From: dreibel@idirect.com
Message-ID: <3484310b.0@nemo.idirect.com>
Source record: 5738

Agenda for Toronto Atari Federation meeting for December 17th, 1997:

ATARI - THE MIDI CHAMP!

The Atari ST computer, the first on the market with standard MIDI ports and intelligently designed software, became the number one choice of recording studios and home recordists throughout the late eighties and early nineties. And today, despite the encroachment of the PC and Mac in the studio enviroment, many artists still rely on their STs for their projects for their relative ease of use and lower system overhead. This TAF meeting will be of especial interest to MIDI users, as there will be demonstrations of the latest incarnation of E Magic Logic (2.5), perhaps one of the best sequencing programs for the Atari on the planet; as well as a demo of a new arpeggiator program from upstart company Electronic Cow. You'll be amazed at just what an Atari is still capable of!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

The store should get a makeover in January with a Feb. 1 deadline.
Thanks for the store report which will goto my team leader in Calif.

I agree with you on the 6500/300 model. I don't know were it fits in
Apple's product mix since its a consumer model priced above $2500. If it
were below $2500 w/$400 rebate w/ monitor purchase would be a good deal.
Apple has a nice rebate promo w/ the 6500/250 w/ Apple 15' AV monitor for
$2400 minus $400 Mail in rebate = $2000! Thats a deal! However with the
G3's starting at $2000, they had to do it. I will take the $2399 G3
model, the one with 266 MHZ w/ zip over a 6500/300. The $2000 G3 blows
away a Pentium II at 300 clock speed with both hands tied behind..

Atari Prototypes & Vaporwares has moved !!!

The new site is now at www.atari.nu

Hundreds of brand new, never before seen images of rare & never released Atari products such as The Atari 600 prototype, the Atari CX-2000 prototype, the Game Brain, the Atari STylus, even several prototypes which are unknown and unclassified. Also there are articles and information from past magazines, newspapers and internal Atari documents.

Plus the addition of Atari Sounds & Movies, featuring this month 3 new AVI's from Alan Alda "Like A Kid", The Atari 7800 Test Lab and The Fun is Back Atari 2600 commercials.

Stop by and check out the new look and all the new information and images at the Atari Prototypes & Vaporware website.

This is just wrong and you know it. Sure, in the past there have been
a few problems with ����������ъ��ω�□�塢�□��������碑, but it's
going to be the wave of the future. Businesses are all moving away from
�ъ������ and switching to ����������ъ��ω�□�塢�□��������碑 at
a rapid rate, and pretty soon all the �ъ������ programers are going
to be out of jobs. �ъ������ is much too complicated anyway, and
����������ъ��ω�□�塢�□��������碑 can do all the same things, in
addition to running your old ����������ъ��ω�□塢 and even
����������ъ��ω�□塢 ��● programs with ease.

```
Newsgroup comp.graphics.research deleted.
```

I would like to motion that all posts in *.advocacy move to the newer
����������ъ��ω�□塢�□��������碑 format of postings. This way,
everybody can pipe from their newsreader through
sed `s/����������ъ��ω�□塢�□��������碑/Windows NT/g`,
Search-Replace-����������ъ��ω�□塢�□��������碑-Linux, or whatever
they want, and everyone's happy.

Understatement of the year. It's a piece of crap and you know it.

> going to be the wave of the future. Businesses are all moving away from
> ы������ and switching to ����������ы��ω�□�塌�□��������碑 at

That's only because they believe ����������ыsoft's FUD about
ы������ being "hard", while ы������ is clearly the most
appropriate solution for many things that
����������ы��ω�□�塌�□��������碑 is being used for.

> a rapid rate, and pretty soon all the ы������ programers are going
> to be out of jobs.

Never! ы������ is growing at an exponential rate. It won't be
going anywhere soon; it is the future!

> ы������ is much too complicated anyway, and

ы������ is only the underlying OS design. You can throw any
interface you want on it. Besides, if ы������ is so complicated,
why does it have a shorter, simpler name than
����������ы��ω�□�塌�□��������碑?
����������ы��ω�□�塌�□��������碑 sounds like something you would
find in ����������ы��ω�□�塌�□��������碑's registry.

> ����������ы��ω�□�塌�□��������碑 can do all the same things, in
> addition to running your old ����������ы��ω�□�塌 and even
> ����������ы��ω�□�塌 ››› programs with ease.

But it can't run the vast wealth of free ы������ software out
there, and ы������ has emulators that will run most of your
old ����������ы��ω�□�塌 programs, and some of your
����������ы��ω�□�塌 ››› programs too, even though the native
ы������ is usually better. As for dong "all the same things", it
may do most of the same things, but it doesn't do them as well.

> Newsgroup comp.graphics.research deleted.

Why do people post things to off-topic newsgroups like that?

> I would like to motion that all posts in *.advocacy move to the newer
> ����������ﾚ��ω�□�塙�□��������碑 format of postings. This way,

It's not a standard, damn it! It's ����������ﾚsoft's proprietary
extensions to Usenet, and I won't use it!

> everybody can pipe from their newsreader through
> sed `s/����������ﾚ��ω�□�塙�□��������碑/Windows NT/g`,
> Search-Replace-����������ﾚ��ω�□�塙�□��������碑-Linux, or whatever
> they want, and everyone's happy.

Those of us with real operating systems, like ﾚ, can do that
already. Oh, and it's sed s/ﾚ/Linux/g, not
����������ﾚ��ω�□�塙�□��������碑. The very idea that a product as
fine as ﾚ would come from ����������ﾚsoft is ridiculous.

1392. TAF MIDI Night Dec. 17th, other news.....

Newsgroup: comp.sys.atari.advocacy
Date: 1997-12-11 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <348f6d62.0@nemo.idirect.com>
Source record: 5651

Agenda for the December 17th TAF meeting:

We're going to be having a MIDI night! Yes, we're going to be demonstrating what has always been the ST's (and TT and Falcon) main advantage, it's standard MIDI ports, with two GREAT demos!

FIRST: Martin Neuland will be demonstrating the latest version of E-Magic's LOGIC program (2.5). Logic is a very popular program on the PC and Mac, and they were kind enough to finally release an update for Atarians, with new features similar to the Mac version. Martin will show all interested in the MIDI side just what this new version of Logic is capable of.

THEN: Dan Dreibelbis will be demonstrating Electronic Cow's MIDI ARPEGGIATOR! EC is an upstart company from the UK dedicated to finding new and wonderful ways to make music on your classic Atari STs; ARPEGGIATOR revives a popular function found on many vintage analogue synthesizers, and adds a few twists of its own - you can even export your creations as MIDI files. And it's handsomely designed too.

It's going to be a fun night for the holiday season - be sure to be there!

UPCOMING EVENTS FOR FUTURE MEETINGS:

JANUARY 21ST: INTERNET NIGHT! We'll be looking at CAB 2.5 and the rest of the STiK suite with the help of our special guest Martin-Eric Racine, a STiK expert who also beta-tests the latest from Dan Ackerman and Alexander Clauss. If you've ever wanted to get online with your Atari and have many or any questions on how to get started and set up, this is the night for you. Mark your calendars now!

FEBRUARY 18TH - GAMES NIGHT! - we're going to look at the best ways to have fun with your Atari computer, featuring some of the best new games available, including the demo for RUNNING, the new DOOM clone for the Falcon! If anyone has any requests for a particular game, be it new or classic, drop us a line and we'll see about covering it at the meeting.

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A

membership in TAF IS Atari support!

TAF Online! BBS - 416-421-8999

Cross-posted to: comp.os.os2.advocacy,comp.os.ms-windows.advocacy,comp.os.ms-windows.nt.advocacy,comp.sys.amiga.advocacy,comp.sys.mac.advocacy,comp.sys.atari.advocacy,comp.sys.be.advocacy,comp.os.linux.advocacy,comp.sys.next.advocacy,microsoft.public

Apparently the world seems caught up in playing games of "whose side are you on", as if to be anti-DOJ automatically means you are pro-Microsoft. Nobody from Microsoft ever put a gun to my head and said, "If you don't buy and use Microsoft products, I'll blow your brains out."

If someone is too ignorant or lazy to take the time to educate themselves about the astounding number of alternatives to "what everyone uses", or blindly insists that the only way they can do what they need or want to do is to go out and buy the "latest and greatest", then they deserve whatever miseries are visited upon them. They have no one to blame but themselves.

Fuck the so-called Department of Justice, fuck the immoral "anti-trust" laws, AND fuck Microsoft. Bill Gates is no threat to freedom of choice, except to those too ignorant to realize their power to choose.

And I don't want the Butcheress of Waco, or any other "public servant", "helping" me by pointing a gun at anyone. Even Bill Gates.

And nobody will ever convince me that government intervention is good*, so don't waste your time. Just wanted all the lurkers, reporters, etc., out there to realize that despite the sheep-like whinings of the majority, some of us don't give a rat's ass.

That's all. You can go back to your little holy wars now.

(*) "Good" for who? Not for the average consumer, and not for the business with the gun pointed at them. Only "good" for government employees, who are terrified they might lose their jobs...and statists the world over, hoping their tyrannical philosophies won't burn and die as they rightfully should.

OS/2, Linux, Amiga, Atari ST, PowerMac. Haven't use Alpha yet, but would
really like to.

Government's job is to protect the rights of the citizens. They do that by
getting out of the way. You've been harmed by Microsoft, or Bill? You sue.
Unfortunately, a lot of do-gooders back in the railroad days decided they
didn't want farmers to be able to sue railroad owners for pollution, so
they eroded that right, and many associated property rights. These laws,
along with "limited liability", are what make it impossible to sue owners
of nuclear reactors for their pollution -- tresspass upon your property.

There is no liberty without property. The bum on the street has just as
much right, no more no less, to the penny in his pocket, as I do to my
meagre pocket change, as Bill Gates does to his billions.

(PS: The original article was Followup-To directed to one group so as not
to continue spamming multiple groups. I've reset that. Please respect it.)

Well, keep that in mind if you're ever 200 miles at sea in a flaming,
sinking hulk of what used to be a vessel... just tell the Coast Guard
"I don't appreciate government intervention, thank-you-very-much."

By not doing anything? :-)

... You've been harmed by Microsoft, or Bill? You sue.

Any opinion of the numerous lawsuits being brought against M$?
One of my favorites is the one being brought by Caldera, Inc.
(http://www.caldera.com) on account of M$'s war against DR-DOS.

I do hope that a lot of M$'s mischief gets exposed; this ought to
make life easier for M$'s competitors, such as Apple, Be, IBM, Sun, and
those who work on Linux -- they should not have to compete with M$ tying
their hands behind their backs with crooked deals.

I think it's probably more analagous to "imagine someone put a flyer on
your car promoting a social issue, and it were illegal, and one of your
friends was opposed to your pressing charges because he/she thought it
was an unfair and unconstitutional law."

Or even better, imagine that the law itself is a gray area, and involved
a high-technology issue, and judicial review stands to set a precedent
which may affect generations of future users of that technology.

Come to think of it, analogies are stupid. Maybe neither one of use
should use one.

Which are illegal? No, but you *want* them to be, I suppose.

It goes over the DOJ's head, too. Which legitimizes d. goods' point.

> >And nobody will ever convince me that government intervention is good*, so
> >don't waste your time. ...
>
> Such as by catching and prosecuting car thieves?

Depends on what he means by "intervention". I don't call prosecution
under the law "intervention", do you? I call it "execution", as in
"executive branch of the government".

Judicial review, now that's "intervention".

MJP

Exactly. So what's your point? They're supposed to just trash their
legacy OS and design a new one just so inferior companies can compete
with them? You make me laugh.

Yes. Some suck (like the Crapintosh OS), some rule (like Linux, BeOS,
NeXT/Openstep, Solaris, Unix in general, possibly Rhapsody, etc...).

Are you trying to be stupid? What does stealing cars have to do with
selling someone a product?

I could say the same for your little comment here.. but the point *is*,
Microsoft shouldn't be able to monopolize a market on a whim just cuz they
have the power to integrate program X into the OS. This is unfair
competition, but that doesn't even matter, see, the real point is that
once there's no more competition, innovation stops, even goes backwards.
The company has no incentive to improve the product, because they own the
market.

I can't say I've found any way to rearrange the above statement to make it
make sense. Loren was saying that they can wipe out competition by
preloading software on PC's.. That is a bad thing for everyone except
Microsoft. What this has to do with trashing their OS, I have no idea.

Macintosh wouldn't exist if Unix could provide the usability, and features
that it has- nor would Unix exist if the mac had the same stability speed.

> >>And I don't want the Butcheress of Waco, or any other "public servant",

> selling someone a product?

not selling them a product, but depriving them of a choice of products by initially dumping the prices and using their position as an OS vendor to make sure the user has no need to buy the competition's products. Its called monopolization.

People often use analogies (comparing one thing to another using like and as :D), to try to give a good example of whats going on. I don't think they work as well as reality, IMHO, but calling them stupid because you took it out of context merits me calling you stupid because I feel like it just as much...

The Mac world and the UNIX world didn't really converge until the 1990s. Prior to that (with exceptions like Sun), UNIX was a time-shared system for pretty good-sized machines. The 1980s desktop world was dominated by Microsoft DOS, a pitiful excuse for an operating system that would have been an embarrassment in the 1960s. Since DOS lacked most of the features that UNIX provided, the expectation was that desktop systems did not need such features (like any kind of multi-tasking - and memory protection means nothing in the absence of multitasking). The three A's (Amiga, Atari and Apple <g>) introduced desktop users to multitasking; eventually Microsoft users gained this benefit. In the 1990s, a desktop machine is _expected_ to multitask, and this brings stability concerns into the equation. So desktop OS development in the 1990s has been in part a quest to provide the GUI features that Mac users grew accustomed to in the 1980s (and Microsoft users in the 1990s) with stability and performance in a multitasking environment.

Hey - UNIX is stable! Hey, UNIX can support a GUI! Hey - UNIX could be a pretty mean desktop system!

Thus, the convergence. Realistically, Apple has lost its edge, in that _all_ desktop computers today have a credible GUI (including Linux+X machines, despite what the NeXTians and Mac advocates claim). Apple's problem is, of course, its arrogance: it truly _believes_ that its GUI is _sooooo_ superior that that alleged superiority, in and of itself, excuses the primitive underpinnings of the MacOS (Rhapsody is for servers - remember that).

While David Field may well be a moron (but I really doubt that he is), his gripes do illustrate that the MacOS is _not_ the perfect user interface, as no such perfection exists (well, bash comes close <g>). As such, Apple had better be aware that the "classic" MacOS is totally outdated, and abandon it in favor of Rhapsody as soon as the Blue Box hits production quality.

Probably won't happen, though. Apple, instead, will try to "milk" both for all they are worth - MacOS for the loyal but naive user base and Rhapsody for the high margins (much like Microsoft and NT).

The ideal would be to create something with the user interface of
the MacOS and the internals of Unix -- and NeXTStep (what Apple's Rhapsody
essentially is) has been the most successful at that to date -- but it has
been exorbitantly priced (one hopes that Apple does not repeat that
disastrous blunder).

Or else creating some "standards" to endure that one's customers
are locked in, simply because of difficulty of switching.

??!!

Did you look at NEXTSTEP?
Whatever, I suspect Rhapsody will fit the bill a lot better than BeOS.

Best wishes,

mmalc.

BeOS has a command line, Win95 has a command line. Are either Unix? No. It is easier to port a Unix tool to BeOS or Win95 because it has a command line, but they are not Unix!

The nice thing about NeXTStep and OpenStep is that it has a full Unix implementation. Any BSD 4.3 program I want to compile, works fine out of the box.

My BeOS gripes:

1) There is no concept of multiple users.
2) It runs on a small set of hardware.
3) There is no concept of multiple users.
4) Much less softwarel than even Linux (no Netscape)
5) There is no concept of multiple users.
6) Eveything seems to be written with CodeWarrior
7) There is no concept of multiple users.
8) It is still unstable (I can crash my machine by running telnet)
9) There is no concept of multiple users.

But don't get me wrong: I do like BeOS. (I'm even composing this message
using ArpTelnet on BeOS to my linux box)

->implementation. Any BSD 4.3 program I want to compile, works fine out of
->the box.

That is NOT true-- you have obviously not programmed much with NeXT
(I haven't used OpenStep) or you wouldn't say that.

Why else would you need this in your C programs:

```
#ifdef NeXT
#include <libc.h>
#endif
```

And, try using ioctl() sometime....

True if you're in the Wintel world; most recent Macs run it.

> 3) There is no concept of multiple users.

?? We get the point.

> 4) Much less softwarel than even Linux (no Netscape)

It's called _Preview Release 2_ for a reason.

Pretty decent selection for barely a year "in public".

> 5) There is no concept of multiple users.

Yah, yah. Remember, in the Wintel world,
"multiple users" means "Move over, I wanna play Solitaire now".

> 6) Eveything seems to be written with CodeWarrior

See # 2: it's a common _Mac_ programming tool (ie, PPC).

> 7) There is no concept of multiple users.

Dude, gimme the joystick. Yo! I said, Gimme the $%^$! joystick!

> 8) It is still unstable (I can crash my machine by running telnet)

See threads above about frozen interface [on X] vs. frozen OS.

[Speaking of threads, killing them in the terminal does wonders,
until you wipe out the deskbar -- and then you have a Mac GUI.]

> 9) There is no concept of multiple users.

It's packaged as a desktop OS right now; "media machine" and
"server from hell" are differing goals. See response to # 1.

>
> But don't get me wrong: I do like BeOS. (I'm even composing this message
> using ArpTelnet on BeOS to my linux box)

Just curious, what hardware are the BeOS and Linux running on ?
I'm composing this on a 6360 [in System 7.6 to get 28.8 internal].

BeOS is _NOT_ [yet ?] marketed as a rival to Linux, nor designed as one.

John the Bevangelist (official!)

"Desktop" OSes need to know about multiple users as well.

-> Just curious, what hardware are the BeOS and Linux running on ?
->I'm composing this on a 6360 [in System 7.6 to get 28.8 internal].

BeOS is running on my PowerBase 180; linux is on my P5/75 :) NT is on
my dual PPro/233 because it's the only one that needs that much horsepower.

I have. Most BSD 4.3 programs compile great. The remainder need minor
modifications, most coming from their dependence on some other (usually
Sun) operating system-dependent features.

>Why else would you need this in your C programs:
>
>#ifdef NeXT
>#include <libc.h>
>#endif

Actually, I've never used that line. Ever. NeXT's compiler handles libc
just great. Where'd you get this?

>And, try using ioctl() sometime....

Uh...all the time. Be more specific perhaps.

At any rate, the last thing you want to be doing here is claiming that
BeOS is somehow as UNIX-compliant or more UNIX-compliant than
NeXTSTEP/Rhapsody. If you *really* want to make this claim, please go
ahead: I'll print out you post and hang it on the wall so my fellow
software developers can get a good laugh.

```
The following are authentic Atari Lab Loaners with Lab Loaner labels,
untampered, with dates or lot #'s, these are NOT cheap eprom copies in
blank cases.

******************NEW ADDITIONS ADDED BELOW**************************

Rules:

1. Auction will close at Midnight 1/15/98
2. Winners are responsible for shipping charges
3. Items will be shipped USPS Priority Mail
4. Items must be paided in advance with check or money orders,
absolutely no cash!
5. Updates will be emailed to all bidders once a day, updates will
be
posted in the newsgroups once every 3-4 days to avoid clogging the
newsgroups
with posts
6. I reserve the right to pull any item at anytime
7. Bids will be made in $2 increments

Note: Although items are up for auction, items are all available
for
trades, I am interesting in anything made by or made for Atari
systems
including 2600,5200,7800,Jaguar, computers and coin-op.

Item Description Bid Bidder
------------------------------------------------------------------------------------------
------------------

1 Socerer's Apprentice 3-28-83 $100 Mao
2a Alpha Beam Ernie 5-16-83 $100 Mao
2b Alpha Beam Ernie 5-16-83 $25 Rikard
3 Moon Patrol (Blue Lab Label) 6-2-83 *TRADED* to BlueSky
4 Donald Duck Speed Boat 4-12-83 *TRADED* to Kprodzin
5 Haunted House $100 Mao
6 Cookie Monster (no date listed) $100 Mao
7 2600 Diagnostic v2.6s $100 Mao
7a 2600 Diagnostic (Secam ver.) 2.6s $100 Mao
8 Galaxian 074 $100 Mao
9 Kangaroo 4-14-83 $100 Mao
```

**********FINAL WEEK
ADDITIONS:**********

10 Joust 222 (No Date) $10
11 Atari Kludge Card & Diag Card $10
(Note: Kludge card is a unique item, its a set of resistors
on an Atari
2600 cartridge board marked with ATARI on it, it was used In-House
by Atari for testing connections to the cartridge port,
included is a
Diagnostic card, neither card has a cartridge casing.)

1417. TAF Meeting January 21st - Internet Night!

Newsgroup: comp.sys.atari.advocacy
Date: 1998-01-07 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <34b2f791.0@nemo.idirect.com>
Source record: 5676

Agenda for January 21st. 1998

The Internet has proven to be an excellent resource for finding out information on support for the classic Atari platform, as well as finding new software that keeps your computer up-to-date with the other platforms. The only problem is - how do you connect your Atari to the 'Net? Can I actually surf the web? Are clients available that will allow me to take advantage of things like ftp, Usenet and IRC?

This special TAF meeting will answer many of your questions on getting online with your Atari, thanks to special guest Martin-Eric Racine, a beta-tester for a number of Internet clients (like CAB and NEWsie) as well as the beta-tester for the STiK TCP/IP stack. You'll see demoes of the latest English version of CAB (2.5) and NEWsie, find out what local ISPs are the best for hooking up, and maybe even see a few surprises. Be sure not to miss this very important meeting that can breathe new life in your favorite computing platform!

BUT THAT'S NOT ALL! MGI Software will also be there at the meeting complete with the newest upgrade to Calamus SL, featuring among other things much improved speed, new functions, and a complete suite of modules for further modifying and fine-tuning your projects. The perfect opportunity to improve your projects.

UPCOMING EVENTS FOR FUTURE MEETINGS:

FEBRUARY 18TH - GAMES NIGHT! - we're going to look at the best ways to have fun with your Atari computer, featuring some of the best new games available, including the demo for RUNNING, the new DOOM clone for the Falcon! If anyone has any requests for a particular game, be it new or classic, drop us a line and we'll see about covering it at the meeting.

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

TAF Online! BBS - 416-421-8999

From: madmax@bfree.on.ca
Message-ID: <69tkmc$t7e$4@newsbell.bellglobal.com>
Source record: 5677

Well, I am tired of seeing unrelated topics and strictly SPAM trash in this newsgroup.

So, can anyone tell me of another computer with a netscape, IE graphical webbrowser that runs on at a clock speed of 8mhz or less?

Brag brag brag:-). I am using a 13 year old computer with an 8mhz clock speed and the first full TOS ON ROM OS Version 1.0.

What I would like to know, is if someone has done anything similar with the other computers of that time.

Such as an AMIGA 1000 say using anything less that kickstart 1.2.
Or a PC 8086-8088 or even a 286 up to say even 20mhz.
Also how about a Mac, say the 1984 model.

So here is the rules.

OLDEST COMPUTER with graphical web browsing.
Must have been available to the public (so early super computers are eliminated.)

The winner is the oldest computer that can get the most features.
I heard that a possible C64 web browser was in the works. That is cool.
There are still Atari 8bits. They had a Gem lookalike desktop.

Ok. so the rules are there aren't any.

Classic computers =1984-87
Amiga 1000
Amiga 500
Amiga 2000
Atari 520ST
Atari 1040ST
Mega ST
IBM XT
IBM AT

VINTAGE COMPUTERS=PRE 1984.
Atari XEs
Commodore 64
Adam

You get the idea.

Now the object is to get on the net. IF on the net you win.
If on the net with a graphical web browser you also win.

You must list your processor, clock speeds and mods that you have done.

Such as

520ST 8mhz
MODS= 2meg of ram added to stock model.
GRAPHICAL WEB BROWSING: YES/no Crystal Atari Browser
SOUND : YES/no Gemjing
AVI/MPEG : YES/no M_player
OTHER : Put something in here:-).
OS version : TOS 1.0
Modem speed : 28000 operating at 19200.
If higher baud rate accomplished by mod list mod.

Ok, so Amigas should be comparable so we want the earlist ones but honourable mention to anyone online with say an A500 with a single floppy disk drive.
I can do it.

Early Macs, possibly. Tell us how you did it.

IBM ATs, I am sure it could be done with a GEOS environment or an old GEM environment. I am sure someones done it.

C-64, now theres a chore for GEOS:-).
Atari XL/XE boy things could get interesting.
ADAM, come on Loyal Adam Users. PROVE IT CAN BE DONE:-).

OF course this is all for fun and discussion.
An open forum for atari bragging maybe, but certainly not a place for the meat like substance SPAM.

Thats all
Brian.

TermiteTCP doesn't fit the bill. It requires OS 2.x, not the 1.2 or older that he required. I don't know of any TCP/IP that works on the older Amiga OSes, but then, I use the newest Amiga OS, so don't need anything that runs on the older ones.

I don't know about the web browsing, but would web page authoring
be within our scope?

I ask because Matthias Jaap has done a Commodore 64 version of
HomePage Penguin for those users to design their own web pages.

The Amiga - yes, they can web browse. HiSoft has their TERMite
TCP/IP stack and web browser suite for Amigas; I've seen pictures, and
their package looks pretty good.

Do you want to share ONE Internet connection with the rest in your Family or office?
SYGATE is the software to do that.

With features like Dial-On-Demand, it will connect your LAN to the ISP if
and only if there is access from your LAN to the Internet.

It is easier to use than proxy servers in that it doesn't require the setup in
each and everyone of your applications running on your PCs.

Free download from www.sygate.com

With one phone line, one modem and one ISP account, everyone in your office
or family can access the Internet from their own machine.

It works for Analog, ISDN modem and Cable modems.

>the other computers of that time.
AFAIK, in the PC-contemptible areas, several DOS-based graphical browsers
are available that
run on a 4.77MHz IBM PC. There is one condition though: requires VGA card.
Which at that time
ofcourse was not available and thus cannot really compete against our ST's.
:-)

I met someone last year outside PC World in Lakeside Thurrock (Essex)
who claimed to have written a graphical web browser for his BBC micro
... he had however, he claimed, tripled its clock speed and rigged up a
VGA card. I asked him what he did and I was not surprised when he told
me he was a microelectronics engineer of notable reputation.

Later,
Jim.

I imagine that a Falcon or TT running Linux would toast most
95/NT based clones as is. With comparisons to wintel one must
make distinctions between specs and capabilities. Software
quality makes a big difference on the Atari end with it's
solid base from digital research & fiercer internal competition.

At the Atari London shows last year there was a Canadian company (I've forgotten their name) showing off Photoline (an extremely cheeky clone of Adobe Photoshop) on a TT with a true-colour graphics card. It was superb and extremely fast.

I friend of mine who was a physicist and computer/microelectronics engineer always enthused about Atari's (and Amiga's for that matter). He would rave on about their elegant and efiicient design (this was someone who could read a schematic service manual and go 'oh that's how they did it ... very clever'!) Above all he argued that Atari's were so good at what they did because they had custom built chipsets. This was a system built from the bottom upwards for a specific purpose and not cobbled together by market forces, economies of scale and a slavish adherence to the demands of the brothers grim, Intel and Microsoft.

Of course the original question is a misnomer as the Pentium, its ancestors and its children, would not have become reality had the competition not been destroyed by the Windows monopoloy. The free market favours the cheap, cheerful and readily available over the technically innovative. Atari's failure (and its competitors) was one of corporate strategy rather than any inherent weakness in their products.

Later,
Jim.

THE ATARI ST QUICK FAQ - v2.3 / 1998-01-29

The 'Quick' FAQ was initially intended to be a small list of resources made to avoid comp.sys.atari.st newcomers asking the same questions over and over again. However, as the project progressed, and other members of the Atari community became involved, it simply became bigger and bigger. I doubt it really deserves to be called 'quick' any more, but hopefully it will still serve it's original purpose.

AUTORESPONDER bales@garonne.stortek.com

Is there any documentation out there on the internet about how to transfer
text files from Ataris to Macs? I have a few diskettes worth of text files
on my Atari that I need on my Mac, and I have the 5" disk drive on my Atari
and a 3" disk drive on my Mac :^/

Any help/pointers would be greatly appreciated.

5" drive ? Are you talking about an Atari 8bit or an ST ?

Whichever the case, you should probably ask in either comp.sys.atari.8bit or comp.sys.atari.st

Cheers,

Nick.

I'd like to know how you transfer text files the other way Mac>Atari. Text
files from the Mac end up as all one line when loaded into an Atari editor
(Everest). I need this for html files particulay.

Chris

Save it as DOS formated ascii on the Mac end.
You could also try loading Mac ascii files into
a wordprocessor on the ST end.

>"too slow".

Your bro is correct that I do need a life. Once the Apple/CompUSA roll
out settles down will sample all the home grown beer brew in Texas.

I still stand by my asertion that Mac software at Best Buy can be piled high in many rows.

Still beeting the dead horse that the 060 can outperform the PPC.. You need to take a test drive on the G3 PowerMacs..

> I should also point out that not everyone has access to such a
?supposedly

>stores (with some excellent stuff hardware-wise - I bought an EZ-135
>and my scanner from these stores), NONE have anywhere near the "12
>>30-foot piles" you're claiming. Toronto once had at least a hundred
>good Mac dealers (including the biggest, Arkon); now they're down to at
>least five, with Arkon gone, the place at Spadina and College turning
>>into a PC store with some Mac support to survive, and even MacWarehouse
>slowly evolving to survive.

As I stated clearly and precise before--I used Best Buy as an example not Computer City. I never been to a CS before. Apple is now out of Computer City(also Best Buy, Office Max and Sears) except in the Canadian province of USA. MacWarehouse is being eaten alive by others such as Club Mac and Cyberian Outpost because they discount thier Mac hardware and are thriving. Would you pay $1999 for a G3 233 PowerMac while Club Mac has the same model listed for $1750?

>of course they'll be more expensive

However you look at it, the Hades/Direct are expnsive regardless. Why not make in large quantities to drive prices down? So much for your Mac expert. Can the current 060 Hades run the current software and tools such as QT VR, Quark, Page Maker and MS Office 98?

All the Best..

1441. TIFKAS Stumbles Again

Newsgroup: comp.sys.atari.advocacy
Date: 1998-02-06 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <34db1565.0@nemo.idirect.com>
Source record: 5600

>
>You did leave out that Umax does make sub $1000 clones.

And you left out a very interesting point about the Umax clones -
that the agreement with Apple and the clones runs out this June. Why
buy a platform that will have the rug pulled out from under it?
>
>
>

>>for libel).
>
>Please cite an example of drivel? I want my alleged drivel quotes.

Remember when 'Power with out the price' meant something at
one time until Atari got greedy by hawking under powered and
over priced computers? This is one of the reasons led to
Atari's demise..

The makers of the Hades/Direct continue the Atari tradition
with their underpowered and over priced line of 040 and
060(does Motorola still make these) ST compatibles..

Just say no...There are other alternatives to continue the
enjoyment of the ST experience and best of class...

Umax Corporation, the maker of the popular scanners have come
out with a class of PPC boxes starting at $949 that gives the

Hades/Direct a run for their money.

Under the SuperMac label..

The C500/LT is a 100% Mac OS compatible box which consists a
PPC 603e/180 mhz, 16 megs, 1.2 gig, 8x CD, 2PCI slots,
keyboard/mouse and software bundle for $945!

With Connectix Virtual PC which shipped this week for $149
street(includes wintel 95 or wintel 3.1 allows to have the
best of both worlds.. Can run dos, OS2, NT and Open
Step(foundation for Rhasopy)...

This box will run the upcomming July Mac OS8 and Rhasopy..

Try that on a Hades/Direct...

Peter
-formerly sinclap..

Any questions, TIFKAS? This is drivel of the highest order - and
unwelcome in this conference, designed to inflame and defame.

>>> 1) you claim that Apple is actually turning a profit. How can that be
>>> when the fiscal year report shows that Apple LOST ONE BILLION DOLLARS,
>>> with $160 MILLION LOST IN THE LAST QUARTER ALONE?

>high in many rows.
>
>Still beeting the dead horse that the 060 can outperform the PPC.. You
>need to take a test drive on the G3 PowerMacs..

I've tried a G3, thank you. Nice computer, but way too expensive -
in fact, here in Canada it's priced around the same price as the
'060-based DirecT. You still persist in being an "expert" on the DirecT60
despite the fact that you admit the only Atari product you've ever used
was a 520ST. I've tried out both systems, and will say that as far as
performance there is still no contest.

>As I stated clearly and precise before

translation: fuzzification of the obfuscation.

--I used Best Buy as an example not
>Computer City. I never been to a CS before. Apple is now out of
>Computer City(also Best Buy, Office Max and Sears) except in the Canadian
>province of USA.

as stated before, Canada is a separate country, has never been and
never will be a tributary of the USA, and is capable of defending
itself against an outside threat, as shown during the War of 1812.

I personally think that Apple's move to dump all their dealers
other than CompUSA is a giant step backwards. Shouldn't they be trying
to be getting a foothold rather than kicking the boots off in the
middle of the quicksand?

Too bad you haven't been to a Computer City, it's a pretty good
store. In fact, they've done a great job refurbishing the Mac
department in the last month. I'd highly recommend them now for a Mac
purchase- but they
still don't have Mac software in "12 30' piles". In fact, I'd recommend
them for just about any peripheral purchase

>

got any quotes and dates on that? I'm finding the exact opposite -
ever try CAB 2.5? With STiNG and CAB 2.5, I've got a wonderfully stable
system that rivals Netscape.
>
> > 3) claiming that Atarians rely on 80's applications (when stuff is
>>still being developed both in shareware and, to a lessed extent, the
>>commercial market).
>
>2 apps?

I'd say that there are definitely more than two apps out there for
the Atari - CAB 2.5/2.6, Papyrus, Texel, Le Redacteur, Apex Media, E-Mailer,
NEWsie, WEN_SUITE, Light of Adamas, HP Penguin 2, DA's Layout, Calamus
SL '98, etc. Another attempt to
inflame? You're clutching at straws, TIFKAS - and it's not working.

>

>such as QT VR, Quark, Page Maker and MS Office 98?

Apples to Oranges, I see. I'm being just as productive on what is
considered "obsolete technology" - and without having to deal in any way
with Microsoft. Those who prefer the Atari/TOS enviroment who've
invested in perfectly good software would certainly migrate to a
familiar enviroment rather than eat their investment (and have to buy
more software to replace the software they've eaten) on another platform
whose future is still a bit iffy. And with the relatively low-cost Milan
coming, Power Without The Price is once again in our grasp Seems you're
still mistaking your Mac for your manhood.... ..

Ok, it is a great story and sounds very likely. BUT WE MUST FIND THE FISH.
This is very cool, I would be impressed. So, while true, I need some proof
that it actually works and if he wrote a published article or something.

I mean, I could say I know a guy who has an SVGA hooked up to his ADAM computer
and wrote a browser for it. So, there is a race in the vapourware category in
the Vintage modified section. The 4.77pc with VGA vs the BBC micro with VGA.

Ok, I will let the VGA pass. That is a valid hack, so while not stock I will
put it into the vintage modified area. But, more importantly, we must find
a person actually using a 4.77MHz IBM PC. So while you have provided a minimum
spec, I need to find a user actually on the internet doing so. Even using a
faster computer, but we must find the fish:-).

Imagining is good, but is it true? I would like to know if a TT could run
linux faster that 95/NT? However what about a PC running linux vs a TT.
I mean the TT is pretty old now and PCs are very fast.

Ok, the poster of the 4.77PC webbrowser has squashed even honourable mention for the C-64. HP Penguin is nice, but is out of the scope of this competition.

Now if he can locate a USER. Currently I have seen 8088 selling for the hefty price of $25cdn. About $9.00US, add a used VGA card for say $5.00 and you can win this valuable contest. I may do this myself just to beat my Atari:-). However I have a 286handy, might try it.

Also, opening the scope to STs/Amigas using IBM emulators. So say ATspeed or possibly falcon speed (in the 1980s superhack category:-).

Of course there is always PC DITTO. Try running PC ditto with the PPP connect package. Wouldn't know about the VGA support though? Real hack here. Now this would be tops, probably take a day to load in a page.

I didn't know he actually did it? That is a handy tool, although I haven't
quite figured it out myself:-). I should spend some time with it. Its worth
conversation, but really looking for a Webbrowser (doesn't matter how limited
the graphical features are).

> The Amiga - yes, they can web browse. HiSoft has their TERMite

Pictures don't tell you if it will work in say 1meg of ram, or the version
of the OS required. I know the Amiga is very capable, but we are looking for
older Amigas with early OS working on the RGB monitor, you know flicker/flicker.

Thanks for the contribution.

>
>
>Paul

That is correct, OS 2 is too new. Heck do you want me to allow TTs and Falcons
in on this;-). Lets not give Amiga an unfair advantage here. Since I consider
kickstart 1.3 the first decent working version, similar to a good TOS 1.04,
I want to see a PPP for the amiga that is on par with my TOS 1.0. That is why
I am giving leeway up to kickstart 1.2 . So at this moment Amiga is dead in
the Water. Atari is on top. Mac users have no comments. BBC micro and PC
4.77 exist in spec and talk only without any proof of activity. SHOW ME THE
MONEY:-).

Some C64 input, Atari 8bit users probably can't read with their fuzzy screens
(oh that should wake someone up) and are going to be beaten by a BBC:-).

I stated that Calamus is not as good as compared to the offerings on the
>Mac platform.

Thats possibly true. I will be testing Calamus in the near future and most likely be upgrading to the 98 Version. However it is not a program to be overlooked as it always has had great potential. I will be curious to see the Windows version as well.

By the way I think macs are well on their way to joining their 68000 based cousins in the pit of despair. Windows rules and that is the painful fact.
>

>
>Many Atari users have stated otherwise. That internet tools are sorely
>lacking on the ST platform.

I wouldn't brag about internet tools for the mac. They are light years behind what is available for windows. A comparision to the ST though is pretty fun. I am interested in a browser and internet software for a Mac plus with 1meg of ram and a 20meg drive. What do you recommend? Be certain it will work, tell me if I need more ram etc. Oh yeah I am running only system 6.

As for internet tools being sorely lacking. I think these users are out of the loop as are many ST users. Most have long dropped their STs. What do you expect from a 13 year old computer? However I have PPP working perfectly on my 520ST with 2.5meg of ram. It has a functional graphical web browser that has performed very well. The Newsreaders, ftp, telnet clients and irc are also good. I haven't gotten into the MINT setup but that may be in the future. Actually having not used my ST in over 5 years I find the Atari internet package pretty complete , but more importantly, it is constantly in development, which means there have been plenty of updates, features and bugfixes in each new release. THis is very fun. All these programs are working on my ST which is 13 years old and is running the first version of TOS.

>
> > 3) claiming that Atarians rely on 80's applications (when stuff is
>>still being developed both in shareware and, to a lessed extent, the
>>commercial market).

Some 80s apps were pretty good, particularly the Cyber stuff, but I think the best commercial ST stuff came in the early 90s. All this stuff heading toward year 2000 is a bonus for ST users. Some of todays shareware is as good as commercial and I have come across some freeware/postcardware that is good enough to be commercial and is 1998 releases. Awesome.

>
>However you look at it, the Hades/Direct are expnsive regardless. Why

>not make in large quantities to drive prices down?

And who would they be sold too? Atari TOS computers are a cult machine with
lots of flexibility. They are not a broad based consumer good like a WINDOWS
based PC. Atari users are alot like Mac Users and Amiga users, they are loyal
to the bitter end.

>So much for your Mac
>expert. Can the current 060 Hades run the current software and tools
>such as QT VR, Quark, Page Maker and MS Office 98?

Well I think the idea is to run ATARI TOS programs on it. Unfortuneately their
is a ton of software the Macs/powerpc can't run either.

Obviously if Atari users wanted mainstream MS office software they would get
a real computer and run windows. Of course anyone can be a drone.

>
>Peter S.
>Apple Sales/Marketing Power Rep(CompUSA)

Perhaps they could use you in Canada. Macs look like Atari computers in the
80s. They would sit in stores on the shelf and be ignored while users bought
a PC. Mac dealers are dead in the water here. Probably a few years left but
really once the decent Mac software publishers leave their really isn't anything
left that is fun about the mac/powerpc. I would hate to be in your shoes, directly
involved with the sales of a computer that you know is an uphill fight all the
way and the competition is winning each and every battle. People choose on
mass consumption, not on quality. And if you forget or never knew, Ataris were
the cheapest computers with the most performance and they still didn't take off
in North America. So the price of the HADES is irrellevant. What is rellavent is
if someone wants one and obviously some people do.
I think the fact that my $900 investment is still being used today is proof of
its performance. I bought a computer 13years ago that was internet capable with
PPP and never even knew it;-). I have and will put my ST up against any other
computer today and it still performs admirably. I have seen the Atari/Amiga wars
(Had a couple of them too), watched as PC users decided they really do like
a graphical interface then run amok through 386, 486, P75,133, ...
yet the ST keeps on doing everything.

So keep on entertaining me here,
Brian Van TIlborg.

1450. UMICH Unknown "thanks"

Newsgroup: comp.sys.atari.advocacy
Date: 1998-02-07 00:00:00 UTC
From: grovem@rabbitridgecrest.ca.us
Message-ID: <6bhcj6$20r$1@ash.ridgecrest.ca.us>
Source record: 5609

Its been a few years since I visited the UMICH Atari section. The last time I was there, it seemed really dated compaired to CNAM. I enjoy the replacement CNAM ftp site, but was quite suprised when I linked to the Atari area at UMICH. Someone is doing a lot of uploading, and the files are promptly being organized.
Jeez, with all the new software being released, and a site like that for support in the U.S., it makes me wonder what the heck is going on? Are people giving up their PCs and Macs and buying up old Atari hardware? First it's T-Shirts, what's next?:).

Anyway, a big thanks for the ones supporting that area.

Mike

>and PC
>4.77 exist in spec and talk only without any proof of activity. SHOW ME THE
>MONEY:-).

There is KA9Q for the Amiga, and I believe the older versions of the Commodore
stack INet/225 works on 1.3, but applications working under 1.3 would be
lacking.
If you really want to do INet stuff, you need at least OS 2.0, and for
graphical WWW with pictures, OS 3.0 and 4 MB RAM.

>Some C64 input, Atari 8bit users probably can't read with their fuzzy screens
>(oh that should wake someone up) and are going to be beaten by a BBC:-).

There is a guy who designed a 9600 bps modem interface (higher rates on C128)
for the C64, and then went on to program SLIP, telnet and IRC for it.
There is at least one competent offline reader for the C128, perhaps for the
C64 as well. I have heard of a text-based webbrowser being developed, but I
can't remember its name right now.

Brian, I read an article from Dave Troy one time that touched on this. He had compiled "world" under Linux on his TT, then he went to his Pentium (and I can't remember but I think it was in the 90mhz to 120mhz range) setup Linux on it, compiled "world" for it, and ran it. It was faster than the TT but only about 2-3 times faster. The conclusion that Dave drew from this was that while Windoze 95 dragged everything down with all its excess baggage, the processors of today, combined with a lean/clean OS like Linux were, in fact, pretty fast...(running "world" under Win 95, even with a fast Pentium processor was slower than the TT with Linux-<smile>)

(BTW, "world" is the program that draws a spinning globe complete with various things, even a terminator line)

Putting NT on a machine will cripple your hardware. Further
application bloat will follow bogging your machine down further.
The constraints placed upon an ST or Amiga programmer tend to
encourage minimalist solutions instead of fluffy bloat added just
to convince customers that there is some point in getting this
years version when the one from 3 years ago is sufficient.

>linux faster that 95/NT? However what about a PC running linux vs a TT.

Hi I'm new here.

I'm having problems with Cubase audio 2.03, the fact is that when I load the songs from the SCSI HD or from the floopy some tracks are corrupted and notes are missing, if i try loading again the song 3 or 4 times the problem desapears.

If anyone can help me please leave a message in the newsgroup or contact to me at solod@mx3.redestb.es

Thanks .

1455. FS: Atari Network Adapter cards

Newsgroup: comp.sys.atari.advocacy
Date: 1998-02-11 00:00:00 UTC
From: Curt Vendel <webmaster@atari.nu>
Message-ID: <34E1F554.A38EA57@atari.nu>
Source record: 5614
Cross-posted to:
comp.sys.atari.st,comp.sys.atari.advocacy,comp.sys.atari.programmer,comp.sys.atari.st.tech,ny.forsale,nyc.forsale

For Sale:

Very limited quantity network Adapter cards for the following Atari
Computer Systems:

Atari Mega ST's (MegaBus version)
Atari Mega STE and Atari TT030 (VME Version)

Note: The Atari Mega STE and TT030 slot can only accomodate (1) one
device, so if you are using a graphics card and want to also use the
network card this is NOT possible in a stock system

WARNING: Many Atari Mega STe's were sold with their VME PAL chips
removed, you will need to buy a set of PAL's and install then for these
adapters to work. To check and see if you have the PAL, open your Mega
STE and look at the 2 sockets close to the VME bus slot, if they are
present you are set, if they are missing you will need to contact B&C
Computervisions (Atari Sales & Service Center) 916-295-9270 or BEST
Electronics 408-243-6950 and order a set.

These cards are compatible with Linux, BSDnet/Atari, and Atari System V
Unix which all have the drivers to use these Ethernet adapter cards for
TCP/IP communication.

I have just recently acquired TOS drivers written by Atari Germany for
these cards, most of it is in Germany, but easy enough to understand,
the drivers are called TOS ANS (Atari Network Services), if someone can
upload these drivers to UMICH or someplace public I would like to place
these drivers up onto the Internet for everyones benefit.

Both versions (MegaBus and VME) are the same price:

Riebl Ethernet Adapters: $150 each (Includes 1 3.5" disk with TOS ANS
drivers and 1
"T" connector for the Ethernet card)

Shipping within the U.S. is $5.00 USPS Priority Mail, Shipping outside
the US via ground is $8.00, via Air is $14.00

NOTE: Quantities are very limited, please contact me by email prior to
sending payment to reserve a card.

I volunteer for the test.
I bought a PC in 82, an awesome 8086, at 4.7MHz which I gave to my
mom. Will this software work with Hercules monochrome? or maybe I
put an old ATI card in it. let me know this software - where can I get
it? and I'll load it up on my moms machine and see how it works.
2400 baud modem right? :-)

Source record: 5616

in order of cubase audio 2.0 manual I had do in my atari falcon 030 the
following
suggested modifies for decrease the input audio internal port gain:
I had removed R56; R57; R90; R92; C21; C81;
I had changed R66 and R87 from 100K to 47K
I had put 470 pF in parallel to R67 and R88
I had put 100 pF in parallel to R66 and R87

The audio sensibility of my falcon is now orrible not better of the
original state.

So, I'm looking for the original values, for re-replace it, of the
follow components:

R56 =?
R57 =?
R90 =?
R92 =?
C21 =?
C81 =?

THANK YOU!!!

It's not my task to judge the price, but I think it should be mentioned that
Best Electronics sold those for $60 each at the last Atari fair in Neuss.

www.caldera.com

The information came from within this thread.

Remember this is an open contest, so if you have an old Atari 8bit thats
a computer that hasn't had any feedback yet. Perhaps I will post on comp.sys
atari.8bit.

Also, you don't have to use 2400, I did because it was all I had at the time,
however, if you want to give us the painful feedback at this speed, it will
certainly win brownie points.

More importantly, this contest is for fun.

For Sale:

Riebl VME Ethernet Adapters for Atari Mega STE and Atari TT030 computers

Works with Linux, BSD/Net Atari, Atari Unix System. Cards will be
supplied with TOS
drivers. $150.00 each

Riebl MegaBUS Ethernet adapters for the Atari Mega ST computers
I have only 2 of these cards remaining, all others were sold
immeadiately. $150.00 each

1 Matrix TC1208 VME graphics card (spec's unknown) $350

1 Matrix C110ZV VME graphics card (256 colors out of 16 million)
1280X960 color
at 75hz, mono 4096X4096 at 125hz $350

1 Crazy Dots VME graphics card: $350

1 ISAC MegaBUS graphics card (16 colors out of 4096) 1024X768
(duochromatic) 800X600 at 50hz: $375

Atari DMA bus Ethernet adapters: These adapters work on all Atari ST's
with DMA ports on them. These card wer built by Atari in 1990 to allow
ST's to work over ethernet. These cards require Atari ST external
power supplies (not included) and I have no drivers for these cards, I
have a very limited quantity of these cards: $50 each

NOTE: Attention Mega STE owners, if you intend to purchase a network or
video card, please be certain that you have PALs/TALs installed near
your VME bus port, if the sockets are empty you will need to purchase
these chips. They can be purchased at B&C Atari Sales & Service:
916-295-9270 or www.myatari.com

Shipping: (within the contential US) is $5.00 for USPS Priority shipping

NOTE: Overseas buyers, if you are not in the contential US, shipping
will be $9.00 ground (5-6 weeks) or $14 for air shipping.

Please email me if you are interested in any of the above.

Yes, I don't know who is taking care of things. Perhaps it is Howard Chu
somehow, I am not certain. But apparently it has improved.

>Jeez, with all the new software being released, and a site like that
>for support in the U.S., it makes me wonder what the heck is going
>on? Are people giving up their PCs and Macs and buying up old Atari
>hardware? First it's T-Shirts, what's next?:).

Yes, this is what is happening:-). Really though the term obsolete is changing
IMHO. While the technology of the Atari is falling behind the software is remaining
current and improving. In fact most of it seems to be optimised. Usually a
platform at the end of its rein is plagued by bad software, but this is not
the case here. I am not certain whats happening with Amiga. However, My nephews
2.5 year old Pentium 75 is just about toast. New software requires more hardware
and is not optimised to work on his. Pentium 166s are now selling for $700cdn
with monitor software and everything else, but even these are considered slow
and I wouldn't buy one. Infact I have purchased a falcon. No foolish as this
may appear, I think I am going to have more fun finding stuff, than wanting
stuff or needing stuff for a pentium machine. I don't need to get caught in
a ratrace. However, I even question my falcon purchase as this ST really seems
to be able to do everything I need. Finding software to work on a 4 year old
486 is nearly impossible, as it is too slow to be considered working:-), and
since I have gotten a good 13 years out of my ST , I can't see the need to
buy a computer and have it obsolete in 3 years, not just outdated, but obsolete
even if it is technically, more powerful the benefits are no longer realized
therefore it is less powerful.

My nephew had an Atari, and is now ready to upgrade, actually, I think it is just
under 2 years old:-). Anyways, here was shocked to see I got the ST on the
internet with a web browser, and in fact now has some remorse over this, however
since he is a kid and doesn't pay it is his father who is most remorseful.
But that is computers.

By DMA, do you mean ACSI, the Atari hard disk port? Do you at least have
the manual or the data transfer spec? And does anyone know of any
drivers for TOS or, more importantly, Linux or MintNet support?

Dan

Dear Atari owners,

I am wondering if anyone can help me.

I own an Atari Mega 1 that I use for music. It originally came with Microsoft Word for ST and I currently need to do some word processing on it.

Unfortunately, though I still have the mauals and documentation, the Word disk was stolen and I need to get a replacement. Does anyone have a copy of Word for ST they can send me or email me?

Please email me directly since I do not receive all postings to the group.

Thank you for your assistance,

Robert Davis

p.s. Please don't flame me about software piracy. I have purchased all the software I use, I do own a licence for this package and this package is not currently sold commercially.

Robert Davis

Howdy folks... I'm delving back into my ST a little lately, after wading thru the world of Macs and PCs for a few years (which is not always pleasant), and I was wondering...what's this CNAM ftp site? Would love to check out what they've got.

thanks!! :)

It's not the CNAM archive anymore. It's now called lip6 and it's at:
ftp://ftp.lip6.fr/pub/atari

There's also a regularly updated FTP site list maintained at:
http://www.geocities.com/SiliconValley/Bay/8745/

Cheers,

Nick.

I think we have had enough fun at his expense, so to answer his question...

What you have is most likely Microsoft WRITE, not WORD. Microsoft dropped
support for this product within a year of introducing it. They reasoned that
if the
Atari users were not willing to support Microsoft they would not support
Atari.
This was the result of really bad reviews of the software, and a general
bashing
of the product by those that claimed to have purchased it.

I have not seen a copy of this in years. You would do much better by
getting
yourself a copy of WordUp.

Brian

>By the way I think macs are well on their way to joining their 68000 based
>cousins in the pit of despair. Windows rules and that is the painful fact.

Really. Must be different in the U.S. Canadian territory. Here in the mother
country and Europe, the G3 sales have been burning rubber. Nice try.

>I wouldn't brag about internet tools for the mac. They are light years behind
>what is available for windows. A comparision to the ST though is pretty fun.
>I am interested in a browser and internet software for a Mac plus with 1meg
>of ram and a 20meg drive. What do you recommend? Be certain it will work, tell
>me if I need more ram etc. Oh yeah I am running only system 6.

He he he he. Why not Apple II and III. Hell what about the Atari 8 bit?

Mac internet tools light years behind wintel? That would explain why 64% of
web content development is done on the Mac.

>As for internet tools being sorely lacking. I think these users are out of the
>loop as are many ST users. Most have long dropped their STs. What do you expect
>from a 13 year old computer? However I have PPP working perfectly on my 520ST

>And who would they be sold too? Atari TOS computers are a cult machine with
>lots of flexibility. They are not a broad based consumer good like a WINDOWS
>based PC. Atari users are alot like Mac Users and Amiga users, they are loyal
>to the bitter end.

A cult machine? That would explain the added cost. The PC and Mac have lots
of flexibility but in a different way but cost less. A G3 233 Desktop is
below $1600.

>Obviously if Atari users wanted mainstream MS office software they would get
>a real computer and run windows. Of course anyone can be a drone.

Wintel is a real computer? I guess the Macs are real Maytag appliances. Have
you seen Office 98 on the Mac? I have since I have a beta. Very nice.

>
>Peter S.

>>the cheapest computers with the most performance and they still didn't take off
>in North America. So the price of the HADES is irrellevant. What is rellavent is
>if someone wants one and obviously some people do.

The reason why ATARI DID not take off is that know one knew about them. Kept
it a secret. By pricing so low did not leave a margin to advertise.

As for hate being in my shoes is like eating crow. This is an exciting
oportunity to participate in getting Apple back to healthy status. Apple is
in a upswing now due to strong sales of the high margin G3's and Apple's
renewed upswing in the retail channel due to CompUSA's Apple store with in a
store(SWIAS). Apple made money last Quarter and scored third place in January
for total retail revenue sales.

My role in the Comp's Apple swias is to keep it upto code. Very demanding and
exhilerating job.

> And you left out a very interesting point about the Umax clones -
>that the agreement with Apple and the clones runs out this June. Why
>buy a platform that will have the rug pulled out from under it?

This July actualy. Do you have info that I do not have? The rug is still in
place. Umax released a new model on Monday, the S900 with a G3 card for three
grand.

>Remember when 'Power with out the price' meant something at
>one time until Atari got greedy by hawking under powered and
>over priced computers? This is one of the reasons led to
>Atari's demise..

Sounds like an objective fact. Very truthful.

>The makers of the Hades/Direct continue the Atari tradition
>with their underpowered and over priced line of 040 and
>060(does Motorola still make these) ST compatibles..

Have you priced one lately in comparison to the G3's?

>Just say no...There are other alternatives to continue the
>enjoyment of the ST experience and best of class...

Very true in comparison in what you can get today. The price of replacement
processors and video cards get you a 200 mhz PowerMac.

>Umax Corporation, the maker of the popular scanners have come
>out with a class of PPC boxes starting at $949 that gives the
>Hades/Direct a run for their money.

Very true, a fact.

>Under the SuperMac label..

Entering Canada is no different. Same restraunt and fast food chains, movies
as well as culture. Is there actually a difference between the two countries
besides one is socialist and the other is capitalist?

> I personally think that Apple's move to dump all their dealers
>other than CompUSA is a giant step backwards. Shouldn't they be trying
>to be getting a foothold rather than kicking the boots off in the
>middle of the quicksand?

Yes and No.
I disagree on the Sears decision. Made since with Best Buy, Office Max and
Circuit City. These stores carried about two cpu Sku's and the overal buying
experience was hurting Apple. Were still in regional retailers like
Microcenter and Fry's who have done well with Apple.

> Too bad you haven't been to a Computer City, it's a pretty good
>store. In fact, they've done a great job refurbishing the Mac
>>department in the last month. I'd highly recommend them now for a Mac
>purchase- but they

Time for Canada-101 :)

Actually, Canada is a capitalist country. Canada may appear to be socialist because it has a more generous welfare and medical system for those without a lot of money. Education is also heavily subsidized. Culturally, our countries have some striking differences. The most obvious is that Canada is very multi-cultural while the U.S. has a fairly homogenous cultural mix. In Vancouver, for example, nearly 50% of the population speaks a language other than English at home. In the province of Quebec, over half of the citizens speak French as their primary language.

Canadians also tend to have slightly different ethical values. In Canada, carrying firearms is illegal. That may explain why murders occur, per capita, only one tenth as frequently as they do in the U.S. Even if that is not the reason, the difference is striking. The Canadian criminal code is also more focused on rehabilitation and deterrence than retribution. Capital punishment is unconstitutional.

The Canadian political system is also more similar to the British parliamentary system than the U.S. system. Canada is not a democracy (in name); it is a constitutional monarchy. The largest difference between the British and Canadian systems is that Canada has a senate. Of course, the Canadian senate is not elected so it behaves very differently than the U.S. senate. The Canadian public is also more European than American in their outlook regarding the private affairs of their politicians i.e. they regard such affairs as being private.

I haven't mentioned a lot of other differences but they do, of course, exist. Here are a few other facts: Canadians say "eh?" more frequently than Americans, we use the metric system, we have almost 10% unemployment, we have a very small military, we tend to like hockey, we tend to hate baseball and 90% of our population is within 50 miles of the U.S. border.

<other informative Canada postings snipped>

Thanks for the very informative post, Brian - proves once again
that not only is TIFKAS (The Idiot Forever Known As Sinclap) a TROLL,
he's also a CLUELESS troll, who isn't an expert on ANYTHING, much less
computers. He's been outgunned, out-shouted, and outed as a total
ignoramous who's redoubled his efforts to smear Atari users (and to an
almost equal extent, me, because of the fact I'm his most vocal critic)
when he's lost sight of his original goals of disrupting this newsgroup
with off-topic trolls and spam.

TIFKAS' worst nightmare is about to come true, though - we're
making it a goal on TAF to get as many members of the club up and
running with their Ataris using the wonderful suite of TOS-based
Internet clients (which, contrary to TIFKAS' misinformed missives, are
superlative) to come onto this newsgroup and ask him more embarassing
questions about his "expertise".

One can find much better informed Mac info in
comp.sys.mac.advocacy, a place where TIFKAS is too YELLOW to go into
and give his supposed good news about the Mac - maybe it's the fact
that he'll be rendered EXTRA-CRISPY in seconds :)

I suspect that rather than going on a "well-deserved vacation to
sample fine gourmet beers", TIFKAS will soon be on a more permanent
vacation scrounging through garbage cans looking for 1/2-empty bottles

of MD 20/20........

Try buying one in Canada - Apple people just don't give a hoot about
sales. We had one of the largest corporate users in Canada here in
Calgary - and Apple didn't even try to stop them from moving to
PC & Windoze !

The Canadian Curmudgeon (in sunny Calgary)

Hi Daniel,

I nearly fell of my chair in amazement when I saw this thread. I used to read this newsgroup avidly back around 1995 (when it was full of people who owned Amigas slagging people who owned Ataris) but even back then the biggest and funniest spectacle of all was Sincrap, err Sinclap.. I used to relish in his postings and we toasted many a char-grilled flame with one another. At the time I believe he was slagging Falcons and pushing Mac's. Some things never change? Today I thought I'd see if there was anything in this group and then I saw his post! Amazing.. he really does have no life :) This man deserves an award for posting SO much irrelevant and misinformed mush over the years! He never did know jack-all about Ataris! It would appear he's found his niche in life.. supporting Mac's, a gorgeous but dying breed if ever there was one.

I don't know much about CompUSA but I get the feeling that anyone who knows anything about PC hardware wouldn't go near them with a barge-pole? Much like "PC World" over here in the UK. Anyway, all the best Daniel, it's nice to see someone still fighting Sinclap, feel's like they took over where I left off :)

Cheers,

Rich

I believe there is a program that allows you to use a serial mouse with an ST. If anyone has the file or knows the location of the file, I would appreciate your help!

1481. Notator hack for atari emulator?

Newsgroup: comp.sys.atari.advocacy
Date: 1998-03-05 00:00:00 UTC
From: Mike McGowan <jmmcgowan@worldnet.att.net>
Message-ID: <6dnmbr$oe1@bgtnsc02.worldnet.att.net>
Source record: 5640
Cross-posted to: comp.sys.atari.advocacy,comp.sys.atari.st

I have several copies of Notator w/dongles that I have been using on aging st's in a midi lab. At any rate, because Notator is "dongle" protected, running the program on a emulator seems unlikely--but, is there a "dongle-less" hack for this program. Notator is still one of the best sequencing/notation programs around. It would be great if it would run under emulation on a PC, too.

This might just be a dream, but I thought I'd ask!

TIA

Mike McGowan

I concur. If you ever actually _used_ MS Write and got any kind of
decent output, you're a far better man than I. Write was way worse than
worthless (damn! what's a synonym for than that starts with w?). Even

Word Writer would be better, though WordUp is a good replacement.
Personally, I would go with a cheap copy of Calamus 1.09n or Pagestream.
They're overkill, but they're cheap!

Why Gates would ever think that users of computers with a Digital
Research based OS would use an MS product is beyond me...

Dan

A myth.. Apple's sales in Europe rebounded on the strength of the G3.

Really.. I can't believe anyone thinks that Apple really can "fight their way back." Granted, I don't think they're going anywhere too soon (I like my Macs too and will keep them quite some time, thank you), but to think they're on their way back is.. well, a tad naive..

There will be a small percentage, slowly decreasing over time, of Mac users, and they'll be around.. but I think you have to be calling up the Psychic Friends Network a little too much if you can envision a scenario where they actually consistently gain market share over a period of time.

The dongle isn't the only problem. The emulator would have to emulate the Midi
ports too, and also the accurate timing that's required by any sequencer
program. PCs just have crappy timing, whatever you do the ST is way ahead as
far as MIDI-only sequencing goes.

Cheers,

Nick.

Dan,

> Why Gates would ever think that users of computers
> with a Digital Research based OS would use an MS
> product is beyond me...

The problem wasn't that Microsoft Write (or more commonly known as "Microsoft Wrong") was a MS product --- the problem was that its was BAD software (even by Microsoft standards). About the only way that Atari could help promote it was to give it away for free by bundling it with its systems in the late 80's.

As an Atari dealer, I found it much less aggrevating to REMOVE it, throw it in the trash can and substitute Word Writer in the bundle before delivering new systems to buyers. There's nothing worse than delivering a new Atari system to a customer and then having to try to explain why he or she couldn't get the bundled software to work properly and have face needless hours of total frustration.

Atarians didn't buy their systems to have to face that kind of aggrevation. We EXPECT our systems and software to install and work easily and properly WITHOUT having to read exhaustive manuals, 'made-easy' books, or undergo hours of needless frustration.

Most ANYTHING would be a better choice for word processing than Microsoft Wrong!

1492. TAF meeting March 18th - SCSI drives

Newsgroup: comp.sys.atari.advocacy
Date: 1998-03-07 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <35014962.0@diana.idirect.com>
Source record: 5551

As with any computer, storage of your ideas, as well as having media for quick and handy access to your your most-used programs and files, is a must for efficiency and time. And now, thanks to lower prices and improved technology, even the oldest classic Atari computers can take advantage!

At the March 18th TAF meeting our focus will be how to build your own SCSI-based hard drive in a PC case - we'll show you the parts and software you need, where to find them, and how to configure and put it all together. We'll also discuss the variety of options to hook up to your new SCSI system, including CD-ROM (did you know that at last count there are over 50 Atari-specific CDs to choose from?), removable media like ZIP and Syquest drives, tape streamer drives, and even flatbed scanners!

If you're still booting from floppies, your original Atari-specific hard drive is wearing out, or have ever been curious about how a hard drive system can give your classic Atari improved usability, this meeting is not to be missed! See you there!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

Yes, terrible fast food influence from south of border. Same bad movies, although
we don't ban movies such as "if you love this planet" like the toletarian state
below us, afraid of the truth just like the chinese:-).

One Socialist country spends 23% of its budget on personal handouts (welfare)
and 77% on Corporate grants (Corporate Welfare) vs another country that spends
less than 12% of its budgets on its people and over 86% on hand out free money
to large corporations to sell DOUGH in a foreign country. YEAH Pisbury doughboy:-).

But yes one country allows for socialist and communist parties for that matter
while another country doesn't.

Irrellavent non atari argument that does not represent any kind of market
analysis.

>country and Europe, the G3 sales have been burning rubber. Nice try.

HAHAHA ROTFL. Ever heard of 1812. We are still here, still tied to her majesty.
Well some of us, are the rest eat McDonalds. The smell is not rubber it is
plastic cases of former Apple Computers being put to rest:-).

"Nice Try" actually it is just an observation. There were many Mac dealers, which is
no longer the case.
>
>>I wouldn't brag about internet tools for the mac. They are light years behind

>
>He he he he. Why not Apple II and III. Hell what about the Atari 8 bit?

Laughter, how dare you:-). I am serious. Yes apple II & III and 8 BITs are
all part of the internet challenge of Atari Advocacy. Never had an 8 bit.

I still would like an answer though.

>
>Mac internet tools light years behind wintel? That would explain why 64% of
>web content development is done on the Mac.

I believe this figure is pure fabrication. Are you suffering from delusions.
It is just not true. Lets have some fun here, but you can't go off saying a figure
of 64%. I would guess 6.4% with no data to back up my claim and I still would
feel like I have accurately spoken the truth.

>
>>As for internet tools being sorely lacking. I think these users are out of the

>below $1600.
>

I will sell you an ST for $10:-). I just bought a Falcon 3 days ago for an
undisclosed price. Roughly 25% that value. I am happy with it. It is 5 years
old which is considered obselete. I compare this to the 386/486 that were sold
at the time. I can buy them for under $100, and they are now useless IMHO.

>
>>Obviously if Atari users wanted mainstream MS office software they would get

Not a dream, just a nightmare. As you will have read there are too many
problems to overcome. Just an amazing program that takes and ST to the limit
for everything its worth. THis program sold alot of STs better than Atari
ever could. To bad I am not musically inclined.

There was a good article on Atari's history in one of the mainstream computer magazines a year or so ago that talked about that fact in more detail (sorry, I can't remember which magazine it was, but I probably still have a copy of it at the office somewhere if anyone's interested). From what I remember, Microsoft couldn't produce a Windows OS within the timeframe Atari required for introduction of the ST. Microsoft wanted a year or so for development, while GEM was essentially ready to go. And, at that time, the Tramiels were anxious to produce a new system to help revive the company they had just taken over and take it back from the ashes of its former glory.

Sheldon (Computer STudio - Asheville, NC)

There's more to the computing industry than that which
resides at the end of your nose. Not everyone, even those
who do 'real work' are rushing to toss out all of their
old working machines just because something newer and
more expensive has been released.

As far as the Mac II ~ Apple II goes, we've always suspected
as much. Now the great MacVocate has confirmed it for us.

I think it has to do with the fact that during the war of 1812 the
US attempted to invade Canada (which of course due to its being at the
time a British Colony was a prime area for British troops and supplies).
Thanks in one small part to one Laura Secord, who overheard a plot to
march on and capture Fort York (Toronto) and went several hundred miles
to deliver that info to the generals, the Canadian Army wiped the floor
with the US Invasion force. Laura would later have a chain of candy
stores named after her :)

Believe me, we're mostly peaceful - in fact it's been said that if
a civil war ever did happen here that a Mountie on a white horse would
show up and tell us all to go home. (Or more likely, the US would cut
off all ammunition sales to both sides to prevent it from spilling over
the border, but then that's the cynical view :))

We are fairly fiercly nationalistic too, and try to maintain a
distinctive Canadian identity in the face of creeping American culture
- problem is, most Canadians LIKE the US TV shows, music and fast food.
Thank goodness for things like Laura Secord, Tim Hortons and the CBC
(especially their satirical news show "This Hour Has 22
Minutes", which skewers many sacred cows, including American ones -
Rick Mercer once went to Washington and asked Americans if President
Clinton should have an immediate talk with Prime Minister Al Waxman!
(he's an actor best known to Americans as the chief on "Cagney & Lacey")

Hey, maybe they should send Marg Delahunty after TIFKAS to ask him the
question "so, bye, what's it like ta be a xenophobic idiot? :)

You're so right Ron - Canader didn't 'officially' start until 1867 - if it had been the Canadian Army fighting the American Army - we'd not have stopped until we finished the job - and Bill Gates would now be a Canuck

Insert very large, off topic grin and chuckle here

Depends what you mean by force in the computer industry. According to press
accounts, Apple CFO Anderson has stated that Apple will see revenue growth
beginning in the third quarter.

Apple Canada: Infrastructure gutted, but sales up?

Posted: 18:45 ET

[Staff] - Apple's streamlining strategy seems to have taken effect
worldwide, leaving some divisions with little money to conduct business
with. However, could these corporate cut-backs be irrelevant in the
wake of explosive G3 sales?

The manager of an Authorized Apple Canada Value Added Reseller says
that the streamlining is having a devastating effect on the public
perception of Apple in Canada. "Apple Canada has been gutted. Over half
the infrastructure is gone, leaving little more than a marketing
department. This was not necessarily a bad thing ... there was a lot of

redundancy, and things like customer support, reseller technical support and inventory control for the North American market should be easily handled from anywhere efficiently. But the funding structure has left little for promotion and advertising. The Think Different campaign is basically nonexistent here. Apple has virtually NO corporate presence in Canada today. There are entire regions of Canada, like the Maritimes, where the general public honestly thinks that Apple is out of business."

Despite that bleak outlook, Brock Gunter-Smith of a University campus computer store says sales have are on the rebound. "Here in Canada, at the University of Manitoba Bookstore (where I coordinate all the Mac Sales/Support) we've seen a phenomenal come back as far as Mac sales go since the introduction of the G3s. During the days following the price drop, we've have probably a 30% increase in inquiries about the G3 and about the same increase in total orders. Its very depressing that Apple doesn't advertise in Canada (our Apple Rep told an audience of over 75 people last week that Apple Canada has a $0 advertising budget), as I know it would DRAMATICALLY increase sales, as all we get is second hand advertising from the U.S."

With that lack of advertising its hard to believe that G3s are selling like hotcakes. Gunter-Smith says "The G3s have really turned the tide. For the first time in about 2 years, our warehouse has more Macs in it than PCs!"

Disavow what?

Brighter picture of Apple sales in Europe painted

Posted: 18:45 ET

[B. Wilson] - Following our report containing quotes from a European Mac reseller who portrayed a rather bleak picture of Macintosh sales in Europe, several Apple dealers and journalists have written in with contrasting experiences, conveying a thriving Mac OS market in Europe.

An employee of MacZone's education division in Europe says "MacZone's Apple sales in the UK appear to have stabilized (they have been dropping steadily for the past two years) mainly thanks to G3." He goes on to add that the Macintosh G3s are breaking new boundaries in higher-ed. "In higher ed though, G3 has stopped the rot dead. Everyone I talk to in Universities and Colleges (where the drift to NT had begun) has stopped to take note of G3 - some have even started buying them ...."

The MacZone representatives also provides some information about Apple's advertising situation in the UK. "We've also recently had the 'Think Different' ad campaign running here (with limited TV exposure) which people actually noticed."

Geoff Norman, an IT commentator in Europe says that Apple is not only doing a good job of advertising in Europe, but is pricing its systems very competitively. He says "Apple HAS been running some ads in the non-specialist press. For instance, yesterday's Daily Telegraph - one of the leading broadsheets in the UK - carried a full page add devoted to a PB 1400 for 999 pounds."

Norman also says that older Macs are clearing out fast to make way for the priced-to-move G3s. "The 5500s and 6500s are clearing out of stock very quickly at good prices but, nevertheless, I think a lot of people have held off to await G3s - as I'm doing. The 233KHz desktop - 32MB, 4GB, 512KB cache, 24x CD-ROM, KB but no screen - was introduced at 1399 pounds and can now be bought for 1149. This will probably drop a bit more when the 'official' Apple cuts arrive. Even as

things stand, a G3/233 with 15-inch screen for about 1300 pounds is an amazing deal and fully comparable with big-name PCs in the UK market."

Geoff continues by stating that the issue of Newton cancellation is not being taken nearly as harshly by individuals in Europe. "The Newton issue is not so emotive in Europe and the new range of Macs is just too compelling not to sell - I suspect that Europe will turn in good results for Apple in this quarter."

In France, Apple seems to be somewhat limited by advertising policies. The editor of a French Macintosh publication says "Apple doesn't show the snail ad on TV. Not because they don't want to, but, at least in France, because they are not allowed to. Comparative advertising is forbidden in France. To be more precise, it's very restricted. About a month ago, though, Apple published a 2 page campaign in 'Liberation', one of the biggest daily newspapers in France. A quarter of the first page was about the G3 'being twice as fast as the Pentium II.' The editor goes on to say that Apple's future looks bright. "people here in Europe didn't realize yet, as people in the US seem to have, that a new day has started for Apple. And it's about time they do..."

Hi

Saw the replies and noted no mention of "Edhack" which can be both an accessory and Program. Good old Word Writer St, St Writer, St writer Elete 1ST Word & 1ST Word +

Though Pagestream is great; as a word processor it is clumsy, as is WordUP, Calamus etc (there are others) these are for desktop publishing

Word Writer has both Dictionary & Thesaurus capability is O L D came out when the 1st ST's did but for simplistic writing is fine.

Has anyone checked with Toad to see if they have something good.

Edhack is by far the nicest little editor/word processor

Original copies can be found from used software dealers. Anything else is
illegal. Try the Computer Dungeon, they often advertise in this newsgroup.

I see now. Trying to cover all bases. Apple will rise and maintain their strength in their key profitable markets. However, the next battle I believe will be in the Consumer market. Apple and CompUSA invested alot in the Apple SWIAS at 150 Comp stores. From press accounts by Apple and CompUSA, sales have increased substantialy into the double digits of Comp's revenue base.

According to press release by Comp today, the grandopenings of the Apple SWIAS is this Saturday. I will be in Mesquite, TX at that stores if an Atarian assasin wants to stop by.

Atari does NOT have an arcade division. It's a long story, but the end result of it all is that Atari Games, the arcade game maker, is now a division of Williams (maker of Defender, Sinistar, etc...).

As for a new Atari console... I wonder if Hasbro is a Project X licensee?

Not really. Consider the staggering number of patents and licenses involved. Hell, just look at those "key marks" that are mentioned - the Atari name, Fuji logo, Centipede, Crystal Castles, Yar's Revenge, and so on, and so on! That alon is worth a ton of bucks. (Well, to me anyway!)

My Notator occasionally goes wild too. My unit is a 1040 STe with every upgrade imaginable short of a Pak30 and the big 19" mono display [:-(]

My symptom is the whole-note rests suddenly dividing into a long string of 64th note rests. Sometimes switching off, remove and re-inserting dongle and re-booting cures this.

Also on a couuple of occasions the MIDI info for one (but not all) tracks transposed itself up or down a few steps for playback without showing itself as having been so adjusted on the notation screen. On playback I heard myself saying, `What was I thinking of when I wrote THAT?'

Re-booting cured that as well.

Keep us informed as to your tribulations. Hallvard are you reading this? save some of this for your list as you see fit.....

What software developers ? The developers of Dungeon Master are no longer
making software for the ST, or even selling it. It does not hurt them.

It's like saying that selling my beloved STE would harm JTS. Silly.

Piracy however hurts current owners of original copies who see the value of
what they've got diminishing, and 2nd hand dealers who see the value of their
stock reduced to nothing.

Cheers,

Nick.

Hello to all,

I was given an email earlier this morning from an individual who gave me a link for the Techstocks website, within the website it reference that JTS had filed an 8K form for the sale of assets, specifically Atari to Hasbro Interactive.

I decided the only way to know for sure if this was fact or fiction was to go to the source, since JTS is a publicly traded I went to the SEC site at www.sec.gov

So go to www.sec.gov, go to the Edgar Archives, select 8K and type in JTS for the ticker and Viola!!! You get for February 23, 1998 the sale of most Atari assests to
Hasbro for (GET THIS!!!) only $5,000,00!!!

Its real, its true and its official, Atari has been sold!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Item 2. Acquisition or Disposition of Assets.
- --

On February 23, 1998, JTS Corporation (the "Company") sold substantially
all of the assets of the Company's Atari Division, consisting primarily of
Atari
home computer games and the intellectual property rights and license
agreements
associated with such games (the "Atari Assets"), to HIACXI, Corp. ("HIAC"), a

wholly-owned subsidiary of Hasbro Interactive, Inc., for $5,000,000 in cash. The purchase price was determined based upon arm's-length negotiations between the Company and HIAC. The Atari Assets were acquired by the Company in July 1996 when the Company merged with Atari Corporation. There is no material relationship between HIAC and the Company, any of its affiliates, any director or officer of the Company, or any associate of any such director or officer.

Item 7. Financial Statements and Exhibits.

UNAUDITED PRO FORMA CONDENSED FINANCIAL STATEMENTS

The following unaudited pro forma condensed financial statements give effect to the disposition of the Atari Division which was consummated on February 23, 1998. The accompanying pro forma condensed balance sheet as of November 2, 1997 assumes that the disposition of the Atari Division by the Company took place on November 2, 1997. The accompanying pro forma condensed statements of operations for the year ended February 2, 1997 and the nine months ended November 2, 1997 assumes that the disposition took place as of the beginning of the periods. The pro forma condensed statements of operations do not include the effect of any nonrecurring charges directly attributable to the disposition. The results are not necessarily indicative of what would have occurred had the disposition actually been made at the beginning of each of the respective periods presented or of future operations of the Company.

EXHIBIT 99.1

Exhibit 99.1

ASSET PURCHASE AGREEMENT

THIS ASSET PURCHASE AGREEMENT (THIS "AGREEMENT") IS ENTERED INTO ON FEBRUARY 23, 1998, BY HIAC XI, CORP., A DELAWARE CORPORATION ("BUYER"), AND JTS
CORPORATION, A DELAWARE CORPORATION ("SELLER").

RECITALS

This Agreement contemplates a transaction in which Buyer shall purchase certain assets (and assume certain future obligations) of Seller in return for the consideration described herein. Buyer is a wholly-owned subsidiary of Hasbro Interactive, Inc.

NOW, THEREFORE, the parties, intending to be legally bound, hereby agree as
follows:

I. CERTAIN DEFINITIONS. As used in this Agreement, the following terms have the meaning given to them below:

"Acquired Assets" means the following assets of Seller:

A. All right, title and interest in and to the Seller's Products;

A. All Intellectual Property associated with the Seller's Products, including the Intellectual Property identified on SCHEDULE 1, and remedies past and future against infringements thereof and rights to protection of interest therein;

A. The license agreements listed on SCHEDULE 2 (the "License Agreements");

(d) All of Seller's claims, causes of action, choses in action, rights of recovery, set-off and recoupment relating to or arising out of any right, property or asset included in the Acquired Assets; and

(e) all business and financial records, books, files, plans, documents, correspondence, lists, drawings, notebooks, specifications, creative materials, advertising and promotional materials, marketing materials, studies and reports of Seller, whether written or electronically stored or otherwise recorded if, and only to the extent, that such foregoing items relate to the Acquired Assets (not including the items of this clause (e) for these purposes) or Assumed Liabilities (subject to Section 5(b)).

Notwithstanding the foregoing, the Acquired Assets shall not include the Excluded Assets.

"Assumed Liabilities" means only liabilities and obligations arising after the Closing under each License Agreement actually assigned to Buyer pursuant to this Agreement.

"Atari Hardware Platforms" means the following hardware platforms: Atari 2600, 5200, 7800, Lynx hand-held and Jaguar game system hardware, Atari 800, ST and Falcon 030 computer family hardware, TOS operating system, 8-bit operating system, and Portfolio palmtop computer.

"Excluded Assets" means the following assets:

(a) inventory, receivables, furniture, fixtures and equipment;

(b) any tax assets of Seller, including pre-paid taxes, tax credits and tax carryovers;

(c) all tax returns and tax records whether or not related to the Acquired Assets;

(d) the $45,000 balance of the royalty guarantee owed to Seller on December 31, 1997 by Interplay Productions, Inc. under Amendment One to the Game License Agreement dated July 29, 1996, between Atari Corporation and Interplay Productions, Inc. and as otherwise identified in SCHEDULE 3;

(e) software developed by or for Seller or its predecessor under license of intellectual property rights from a third party or third parties for use on the Atari Hardware Platforms to the extent that such software is not related to or associated with any of the trademarks and copyrights set forth in SCHEDULE 1 or any of the game titles set forth in SCHEDULE 3;

(f) Hardware embodying Intellectual Property (other than Seller's Intellectual Property) that is licensed from third Persons.

(g) all assets associated with or related to Seller's disk drive business.

"Hardware" means equipment, components, circuitry, integrated circuits, processors, casings, layouts (including synthesizable code), mask works, manufacturing data, and all designs, schematics, tooling, formulae, processes, and know how therefor (whether or not any such items are presently embodied in physical components) and related Intellectual Property.

"Intellectual Property" means any or all of the following and all statutory and/or common law rights throughout the world in, arising out of, or associated therewith: (i) all patents and applications therefor and all reissues, divisions, renewals, extensions, provisionals, continuations and continuations-in-part thereof; (ii) all inventions (whether patentable or not), invention disclosures and improvements, all trade

secrets, proprietary information, know-how and technology; (iii) all works of authorship, "moral rights", copyrights (including derivative works thereof), mask works, copyright and mask work registrations and applications; (iv) all industrial designs and any registrations and applications therefor; (v) all trade names, logos, trademarks and service marks, trademark and service mark registrations and applications together with the good will of the business symbolized by the names and the marks; (vi) all computer software including all source code, object code, firmware, development tools, files, records and data, all media on which any of the foregoing is recorded; (vii) Uniform Resource Locators, World Wide Web site addresses and domain names; (viii) any similar, corresponding or equivalent rights to any of the foregoing; (ix) all documentation related to any of the foregoing; and (x) all goodwill associated with any of the foregoing.

"Key Marks" means each of the following marks: Atari, the Fuji logo, Asteroids, Battlezone, Breakout, Centipede, Combat, Crystal Castles, Millipede, Missile Command, Night Driver, Pong, Ultra Pong, Tempest, Warlords and Yar's Revenge.

"Knowledge" means actual knowledge of (i) the senior executives of Seller or (ii) John Skruch.

"Lien" means any mortgage, pledge, lien, security interest, charge, claim, equity, encumbrance, restriction on transfer, conditional sale or other title retention device or arrangement (including a capital lease), transfer for the purpose of subjection to the payment of any indebtedness, or restriction on the creation of any of the foregoing, whether relating to any property or right or the income or profits therefrom.

"Person" means an individual, a partnership, a corporation, an association, a joint stock company, a trust, a joint venture, an unincorporated organization, or a governmental entity (or any department, agency, or political subdivision thereof).

"Registered Intellectual Property" means all United States, international and foreign: (i) utility and design patents, design registrations and utility models and all pending applications (both regular and provisional) for any of the foregoing; (ii) registered trademarks, service marks or trade names, applications to register trademarks, service marks or trade names, intent-to-use applications, or other registrations or applications related to trademarks, service marks or trade names; (iii) registered copyrights and applications for copyright registration; (iv) any mask work registrations and applications to register mask works; (v) Uniform Resource Locators, World Wide Web site addresses and domain names and (vi) any other Seller Intellectual Property that is the subject of an application, certificate, filing, registration or other document issued by, filed with, or recorded by, any state, government or other public legal authority.

"Seller Hardware" means Hardware included in the Acquired Assets.

"Seller's Intellectual Property" means Intellectual Property of Seller that constitutes an Acquired Asset.

"Seller's Products" means (i) those products of Seller acquired by Seller pursuant to the merger of Atari Corporation, a Nevada corporation, with and into Seller on July 30, 1996, and any other products of Seller thereafter derived therefrom, including products relating to or associated with the trademarks set forth in SCHEDULE 1 (including video and computer games, games for handheld devices, consoles, Internet play, all other games for play on any platform whatsoever (subject to the License Agreements), and merchandise bearing any Intellectual Property relating to or associated with the foregoing, whether now offered for sale or license by Seller or discontinued) and (ii) all of Seller's products that are listed on SCHEDULE 3.

I. SALE AND PURCHASE; ASSUMPTION OF LIABILITIES; PURCHASE PRICE; CLOSING.

A. SALE AND PURCHASE OF THE ACQUIRED ASSETS. At the Closing (as defined below), on the terms and subject to the conditions of this Agreement, Seller shall sell and Buyer shall purchase all of the Acquired Assets for the sum of $5 million to be paid at the Closing by wire transfer to an account designated by Seller.

A. ASSUMPTION OF LIABILITIES. In addition, at the Closing, on the terms and subject to the conditions of this Agreement, Buyer agrees to assume and become responsible for all of the Assumed Liabilities at the Closing. Buyer shall not assume or have any responsibility, however, with respect to any other obligation or liability of Seller that is not an Assumed Liability. Without limiting the foregoing, Buyer shall not assume or be responsible for any liabilities relating to events arising or occurring prior to the Closing, regardless of when payable, and all such liabilities shall be for the account of Seller.

A. CLOSING; CLOSING DELIVERABLES. The closing shall occur in the offices of Wilson Sonsini Goodrich & Rosati, 650 Page Mill Road, Palo Alto, California 94304 upon the execution and delivery of this Agreement by the parties hereto ("Closing"). At the Closing the parties will deliver the following documents, and such additional documents as the parties may agree to transfer ownership of the Acquired Assets to Buyer (which shall be in form satisfactory to both parties) :

1. Seller shall deliver:

(A) A bill of sale for the Acquired Assets.

(B) Global trademark assignments.

(C) Country-specific trademark assignments.

(D) Patent assignments in recordable form.

(E) Assignment of the License Agreements.

(F) Copyright assignment.

(G) Global powers of attorney respecting trademarks.

(H) Country-specific powers of attorney respecting trademarks.

(I) Assignment of Internet domain name.

(J) Disclosure Schedule (as defined below).

1. Buyer shall deliver:
(A) The purchase price by wire transfer.

(B) An instrument of assumption of the Assumed
Liabilities.

A. ASSIGNMENT OF CONTRACTS AND RIGHTS. Anything in this Agreement
to the contrary notwithstanding, neither this Agreement nor the consummation
of
the transactions contemplated hereby shall constitute an assignment, or an
agreement to assign, any Acquired Asset or any claim or right or any benefit
arising thereunder or resulting therefrom (a "Consent-Required Asset") if an
attempted assignment of such Consent-Required Asset, without consent of one or
more third parties, would constitute a breach or other contravention thereof
or
would in any way adversely affect the rights of Buyer or Seller thereunder;
PROVIDED, HOWEVER, that once all such consents are obtained, this Agreement
shall automatically effect an immediate assignment of such Consent-Required
Asset without further action by either party hereto. Buyer and Seller will
use
their commercially reasonable efforts (which shall not be deemed to require
any
payment of money or other value by Seller or Buyer) to obtain the consent of
the
other parties to any such Consent-Required Asset for the assignment thereof to
Buyer as Buyer may reasonably request. If such consent is not obtained, or if
an attempted assignment thereof would be ineffective or would adversely affect
the rights of Seller thereunder so that Buyer would not in fact receive all
such
rights, Seller and Buyer will cooperate in a mutually agreeable arrangement
under which Buyer would obtain the benefits and assume the obligations
thereunder in accordance with this Agreement, including sub-contracting or
sub-licensing to Buyer, or under which Seller would enforce for the benefit of
Buyer, with Buyer assuming Seller's obligations, any and all rights of Seller
against a third party thereto. Seller will promptly pay or assign to Buyer
when
received all monies received by Seller with respect to any Consent-Required
Asset and any claim or right or any benefit arising thereunder, except to the
extent the same

represents an Excluded Asset. Nothing in this Section 2(d) shall be construed
to diminish the representations, warranties and covenants of Seller respecting
such consents.

I. REPRESENTATIONS AND WARRANTIES OF SELLER. Seller represents and
warrants to Buyer that the statements contained in this Section 3 are correct
and complete as of the Closing, except as set forth in the disclosure schedule
separately delivered by Seller to Buyer with this Agreement, which schedule
shall be initialed for identification by the parties (the "Disclosure
Schedule"). Except as expressly set forth in this Agreement and the
Disclosure
Schedule, Seller hereby expressly disclaims any and all other warranties of
any
kind or nature, whether express, implied or statutory, relating to the
Acquired

Assets, including the implied warranties of title, non-infringement, merchantability and fitness for a particular purpose. Buyer acknowledges that the Seller Hardware is transferred "as is" and that, notwithstanding anything to the contrary in this Agreement and the Disclosure Schedule, Seller makes no representation or warranty of any kind with respect to the Seller Hardware.

A. ORGANIZATION OF SELLER. Seller is a corporation duly organized, validly existing, and in good standing under the laws of the State of Delaware.

A. AUTHORIZATION OF TRANSACTION. Seller has full corporate power and authority to execute and deliver this Agreement and to perform its obligations hereunder. Without limiting the generality of the foregoing, Seller has taken all corporate and other action required for the execution, delivery and performance of this Agreement by Seller, including the sale of the Acquired Assets as provided herein. This Agreement constitutes the valid and legally binding obligation of Seller, enforceable in accordance with its terms. The persons who have executed this Agreement on behalf of Seller have been duly authorized to do so.

A. NONCONTRAVENTION. Neither the execution and the delivery of this Agreement, nor the consummation of the transactions contemplated hereby, shall (i) violate any statute, regulation, rule, judgment, order, decree, stipulation, injunction, charge, or other restriction of any government, governmental agency, or court to which Seller is subject or any provision of the charter or bylaws of Seller or (ii) conflict with, result in a breach of, constitute a default under, result in the acceleration of, create in any party the right to accelerate, terminate, modify, or cancel, or require a notice under any contract, lease, sublease, license, sublicense, franchise, permit, indenture, agreement or mortgage for borrowed money, instrument of indebtedness, security interest, or other arrangement to which Seller is a party or by which it is bound or to which any of its assets is subject, except where the violations, conflicts, breaches, defaults, accelerations, terminations, modifications, cancellations or failures to give notice, individually or in the aggregate, would not have a material adverse effect on the Acquired Assets, the Assumed Liabilities or the ability of the parties to consummate the transactions contemplated by this Agreement (a "Material Adverse Effect"). Seller need not give any notice to, make any filing

with, or obtain any authorization, consent, or approval of any government or governmental agency in order for the parties to consummate the transactions

contemplated by this Agreement, except where the failure to do so, individually
or in the aggregate, would not have a Material Adverse Effect.

A. CONSENTS. No approvals or consents of or assignments by any person (including any federal, state or local governmental or administrative authorities) are necessary in connection with the execution, delivery or performance of this Agreement.

A. TITLE TO THE ACQUIRED ASSETS. Seller has good and marketable title, free and clear of all Liens, (i) to the Acquired Assets identified on SCHEDULE 1 (other than copyrights that are not identified on SCHEDULE 4), SCHEDULE 3 and SCHEDULE 4 and (ii) to its Knowledge, to all other Acquired Assets. At the Closing, Buyer shall obtain good and marketable title, free and
clear of all Liens (i) to the Acquired Assets identified on SCHEDULE 1 (other than copyrights that are not identified on SCHEDULE 4), SCHEDULE 3 and SCHEDULE
4 and (ii) to its Knowledge, to all other Acquired Assets.

A. MATERIAL CONTRACTS. True, correct and complete copies of the License Agreements have been delivered to Buyer. Seller has performed in all material respects all obligations required to be performed by Seller under the License Agreements. To the Knowledge of Seller, each of the other parties to the License Agreements has performed in all material respects all the obligations required to be performed by them thereunder to date. Each License Agreement (i) is valid, binding and enforceable in accordance with its terms, (ii) is in full force and effect with no default or dispute existing or, to the
Knowledge of Seller, threatened with respect thereto, and (iii) shall not be terminated or otherwise affected by the execution and delivery of this Agreement
or the consummation of the transactions contemplated hereby. No consent of any
third party is required for the assignment of any License Agreement to Buyer. Seller has provided Buyer with a complete and accurate list of payments paid to
Seller by each licensee under the License Agreements, indicating the licensee and the month paid, from June 30, 1996 to present. Seller has not received any
advanced payments (including prepayments of royalties, or other payments by reason of which a licensee is entitled to reduce its current or future royalty or payment obligations) under the License Agreements which have not been earned
by Seller.

A. INTELLECTUAL PROPERTY.

1. To the Knowledge of Seller, SCHEDULE 1 contains a list of all trademarks and service marks and applications therefor included in the Acquired Assets that have not lapsed and that are, except as qualified therein, Registered Intellectual Property (the "Registered Marks"), all patents and applications therefor that are included in the Acquired Assets that are Registered Intellectual Property (the "Registered Patents"), and United States copyrights included in the Acquired Assets, certain of which are Registered Intellectual Property. SCHEDULE 3 contains certain game titles that are included in the Acquired Assets. To the Knowledge of Seller, (A) the description of the Registered Marks on SCHEDULE 1 contains, to the extent set forth and

except as qualified therein, the true and accurate date of registration, registration number, registered owner and the class of the Registered Marks, (B) the description of the Registered Patents on SCHEDULE 1 contains the true and accurate patent number and file date of the Registered Patents, and (C) the description of the United States registered copyrights on SCHEDULE 1 included in the Acquired Assets that are Registered Intellectual Property contains the number of such copyright registration.

1. Since July 30, 1996, to the extent that any Seller's Intellectual Property has been developed by any Person other than Seller for which Seller has, directly or indirectly, paid, Seller has a written agreement with such Person with respect thereto and thereby has obtained ownership of, and recordable title to, and is the exclusive owner of, all developed Seller's Intellectual Property by operation of law or by valid assignment.

1. Except as set forth in any License Agreement, Seller has not transferred ownership of or granted any license of or right to use or authorized the retention of any rights to use any Seller's Intellectual Property to any other Person.

1. The Seller's Intellectual Property constitutes all Intellectual Property used in and/or necessary to the conduct of Seller's Atari division business as currently being conducted by Seller.

1. To the Knowledge of Seller, neither Seller's Products included in the Acquired Assets nor the use of Seller's Intellectual Property, (A) infringes upon or misappropriates the Intellectual Property of any Person, (B) violates the rights of any Person (including rights to privacy or publicity), or (C) constitutes unfair competition or trade practices under the laws of any jurisdiction. Seller has received no notice from any Person claiming that Seller's Products included in the Acquired Assets nor the use of Seller's Intellectual Property infringes upon or misappropriates the Intellectual Property of any Person or constitutes unfair competition or trade practices under the laws of any jurisdiction (nor, to the Knowledge of Seller,

is there any basis therefor).

1. There are no contracts, licenses or agreements between Seller and any other Person with respect to Seller's Intellectual Property under which there is, to the Knowledge of Seller, any dispute or any threatened dispute regarding the scope of such agreement, or performance under such agreement including with respect to any payments to be made or received by Seller thereunder.

1. To the Knowledge of Seller, no Person is infringing or misappropriating any Key Mark, other than such infringements or misappropriations that, individually or in the aggregate, would not have a Material Adverse Effect on such Key Mark.

1. Seller and, to the Knowledge of Seller, each prior owner of the Seller's Intellectual Property have taken whatever reasonable steps that are required to protect rights in confidential information and trade secrets of such Person and its successors.

1. None of the Seller's Intellectual Property is subject to any proceeding or outstanding decree, order, judgment, agreement or stipulation that restricts in any manner the use, transfer or licensing thereof by Seller or may affect the validity, use or enforceability of such Seller's Intellectual Property.

1. Seller is not required to make or accrue any royalty payment to any third party in connection with the sale, distribution, license, transfer or other disposition or exploitation of any of the Acquired Assets.

1. Seller has not developed any new video game software since July 30, 1996.

1. Seller owns no Intellectual Property not included in the Acquired Assets that is directly or indirectly competitive with the Seller's Intellectual Property.

1. (A) Alan Helbush is the Administrative Contact listed in the domain name record on file with Network Solutions, Inc./InterNIC Registration Services, and (B) Seller controls the domain name "ATARI.COM".

1. None of the Intellectual Property associated with the Seller's Products, including the Intellectual Property identified on SCHEDULE 1, or remedies past and future against infringements thereof and rights to

protection of interest therein is an asset specified in clause (g) of the definition of "Excluded Assets" set forth in Section 1.

A. SUFFICIENCY OF ASSETS. The Acquired Assets include all assets, properties and rights necessary for compliance by Buyer with all obligations relating to the Assumed Liabilities.

A. LITIGATION. There is no claim, dispute, action, proceeding (including arbitration), suit or appeal, or investigation, at law or in equity,
pending (other than those, if any, with respect to which service of process or similar notice has not yet been made and which are not within the Knowledge of Seller) or, to the Knowledge of Seller, threatened against Seller or involving any of the assets or properties of Seller before any court, agency, authority, arbitration panel or other tribunal that would have a Material Adverse Effect.

There is no outstanding order, writ, injunction or decree of any court, agency,
authority, arbitration panel or other tribunal, and Seller is not in default with respect to any notice, order, writ, injunction, or decree, in each case relating to, or affecting the Acquired Assets, the Assumed Liabilities or the Seller's Products.

A. UNDERLYING DOCUMENTS. Copies of all documents listed or described in the Disclosure Schedule and the Schedules hereto have been furnished or made available to Buyer. All such documents are true, correct and
complete copies, and there are no amendments or modifications thereto.

A. BROKERS' FEES. Seller has no liability or obligation to pay any
fees or commissions to any broker, finder, or agent with respect to the transactions contemplated by this Agreement for which Buyer or its affiliates could become liable or obligated.

A. COMPLIANCE WITH BULK SALES LAWS. The sale, transfer and assignment by Seller to Buyer hereunder and the consummation of the other transactions contemplated hereby do not constitute a "bulk sale" by Seller, and
it is not necessary under the laws of any jurisdiction that Seller comply with the bulk sales laws of such jurisdiction.

A. DISCLOSURE. Neither this Agreement nor any of the Schedules nor,
to the Knowledge of Seller, any other documents delivered by Seller in connection with this Agreement contains any untrue statement of a material fact
or omits a material fact necessary to make the statements contained herein or therein, in light of the circumstances in which they were made, not misleading,
and, to the Knowledge of Seller, there is no fact that has not been disclosed to

Buyer that materially affects adversely or could reasonably be anticipated to materially affect adversely the Acquired Assets, or the operation of the Acquired Assets by Buyer as currently conducted by Seller.

I. REPRESENTATIONS AND WARRANTIES OF BUYER. Buyer represents and warrants to Seller that the statements contained in this Section 4 are correct and complete as of the Closing.

A. ORGANIZATION OF BUYER. Buyer is a corporation duly organized, validly existing, and in good standing under the laws of the state of Delaware.

A. AUTHORIZATION OF TRANSACTION. Buyer has full power and authority
(including full corporate power and authority) to execute and deliver this Agreement and to perform its obligations hereunder. This Agreement constitutes
the valid and legally binding obligation of Buyer, enforceable in accordance with its terms. The person who has executed this Agreement on behalf of Buyer has been duly authorized to do so.

A. BROKERS' FEES. Buyer has no liability or obligation to pay any fees or commissions to any broker, finder, or agent with respect to the transactions contemplated by this Agreement for which Seller or its affiliates could become liable or obligated.

A. NONCONTRAVENTION. Neither the execution and delivery of this Agreement by Buyer, nor the consummation by Buyer of the transactions contemplated hereby, will violate (a) any provision of the Certificate of Incorporation or bylaws, as amended, of Buyer or (b) any statute, regulation, rule, judgment, order, decree, stipulation, injunction, charge or other restriction of any government, governmental agency or court to which Buyer is subject.

A. ASSESSMENT OF VALUE. Buyer has been authorized by its ultimate parent entity to make a good faith assessment of the fair market value of the Acquired Assets, has made such assessment, and has determined that the fair market value of the Acquired Assets as of the Closing is less than $15,000,000.

I. POST-CLOSING COVENANTS AND AGREEMENTS.

A. COOPERATION. Each party shall, at all times following the Closing, not take any action inconsistent with the satisfaction of its obligations hereunder and, subject to the following sentence, shall promptly take any further action necessary or desirable to carry out the purposes of this
Agreement (including the execution and delivery of such further instruments and
documents) as the other party may reasonably request. Seller shall take all actions reasonably requested by Buyer, at Buyer's expense (provided that Buyer shall not be obligated for any cost to Seller in respect of the time of Seller's

employees, officers or directors), to enable Buyer to establish a recordable chain of title to the Acquired Assets, including contacting prior owners of items thereof to request appropriate instruments for recordation.

A. DELIVERY. Immediately following the Closing Seller shall deliver to Buyer, and Buyer shall accept and remove from Seller's premises at Buyer's expense within 30 days of the date of Closing, all copies of tangible embodiments of Acquired Assets transferred to Seller (other than software and code, and such other items as the parties may mutually agree, which shall be transferred electronically on or immediately following the Closing and all tangible embodiments of which shall thereafter be destroyed by Seller); PROVIDED, HOWEVER, that (i) any information contained in such materials listed in clause (e) of the definition of "Acquired Assets" that does not relate to the Acquired Assets may be deleted by Seller before such materials are delivered to Buyer and (ii) Seller may make copies of any business or financial documents (other than documents containing Seller Intellectual Property) prior to delivering them to Buyer. Except as provided in Section 5(c), Seller shall cease use of the Seller's Intellectual Property, including the name Atari and the "Fuji" logo relating thereto.

A. SELLER INVENTORY. Seller owns certain unsold inventory of games bearing the Atari and/or Fuji trademark, and certain other Registered Marks and containing other Seller's Intellectual Property (the "Inventory"). Buyer hereby grants to Seller an irrevocable, worldwide, royalty-free license, for a period of one year from the date of the Closing to use the Registered Marks and other applicable Seller's Intellectual

Property relating to such Inventory solely for the purpose of selling the Inventory. Except as set forth in the previous sentence, after the Closing Seller shall have no right to exploit the Seller's Intellectual Property. Without limiting the foregoing, Seller shall not, following the expiration of the one-year license period set forth above, sell any product referred to in clause (e) of the definition of "Excluded Assets" set forth in Section 1. Seller warrants that the Inventory sold pursuant to this Section 5(c) shall be of like kind and quality to that previously sold by Atari Corporation in the ordinary course of its business.

A. NOTICE OF DEVELOPMENTS. Seller shall give prompt written notice to Buyer of any material development that could have a Material Adverse Effect. Each party shall give prompt written notice to the other of any material development affecting the ability of the parties to perform their post-Closing obligations under this Agreement.

A. ENFORCEMENT OF RIGHTS. In connection with the enforcement of its rights of ownership of the Acquired Assets and the enjoyment thereof, Buyer may bring actions in the name of Seller, or cause Seller to join any such action as a party, as reasonably necessary, provided that Buyer shall indemnify Seller with respect thereto.

A. MAINTENANCE OF INTELLECTUAL PROPERTY; DELIVERY OF NOTICES. After the Closing, Seller shall not be responsible for the maintenance or renewal of any registration with respect to the Acquired Assets, such responsibility to belong to Buyer as the owner of the Acquired Assets; PROVIDED, HOWEVER, that Seller shall promptly forward to Seller any and all notices and correspondence which it may receive pertaining to the Acquired Assets; and FURTHER PROVIDED that Seller shall remain responsible for the maintenance and renewal of registration with respect to all of the Consent-Required Assets retained by Seller pursuant to Section 2(d) of this Agreement as a consequence of the failure to obtain a required consent of a third party until such time as the applicable consent is obtained.

A. LITIGATION SUPPORT. In the event and for so long as Seller actively is contesting or defending against any action, suit, proceeding, hearing, investigation, charge, complaint, claim or demand in connection with any fact, situation, circumstance, status, condition, activity, practice, plan, occurrence, event, incident, action, failure to act, or transaction involving the Acquired Assets or the Assumed Liabilities, Buyer will provide access upon prior request and during its regular business hours to the books, records and other items specified in clause (e) of the definition of Acquired Assets set forth in Section 1 as shall be reasonably necessary in connection with the contest or defense, all at the sole cost and expense of Seller and subject to Seller's execution and delivery of Buyer's standard form of confidentiality agreement with respect to such items.

I. INDEMNIFICATION.

A. INDEMNIFICATION AND REIMBURSEMENT OF BUYER'S LOSSES. Seller shall indemnify Buyer and its affiliates, together with their respective officers, directors and employees (each a "Seller's Indemnitee") against Losses (as defined below) as set forth in this Section 6. If a Seller's Indemnitee shall have suffered a Loss by reason of (i) the breach of any of the representations or warranties made by Seller herein, (ii) any matter arising prior to the Closing with respect to the Seller's business, an Acquired Asset or an Assumed Liability, (iii) any liability of Seller that is not an Assumed Liability or (iv) any breach of a covenant of Seller hereunder, Seller's Indemnitee shall be reimbursed for such Loss by Seller as set forth in this Section 6. For purposes hereof, "Loss" shall mean any losses, liabilities, claims, damages and expenses incurred or reasonably expected to be incurred,

including penalties, fines, interest, amounts paid in settlement and reasonable fees and disbursements of counsel, and expenses incurred in connection with any investigation, action, suit or proceeding instituted against an indemnified party. Notwithstanding the foregoing, Seller shall have no obligation to indemnify Seller's Indemnitees for Losses which, cumulatively, total less than $25,000; PROVIDED, HOWEVER, that if cumulative Losses equal or exceed said $25,000, then Seller shall indemnify Seller's Indemnitees for all of such Losses. Liquidated Claims (as defined below) actually paid by Seller under this Section 6 shall be limited to an aggregate of $5 million.

A. INDEMNIFICATION AND REIMBURSEMENT OF SELLER'S LOSSES. Buyer shall indemnify Seller and its affiliates, together with their respective officers, directors and employees (each a "Buyer's Indemnitee") against Losses as set forth in this Section 6. If a Buyer's Indemnitee shall have suffered a Loss by reason of (i) the breach of any of the representations or warranties made by Buyer herein, (ii) any matter arising after the Closing with respect to the Buyer's business, an Acquired Asset or an Assumed Liability, provided such matter is not related to or arising from any breach of a covenant, representation or warranty of Seller or any act or omission by Seller involving wilful misconduct, fraud or bad faith, or (iii) any breach of a covenant of Buyer hereunder, Buyer's Indemnitee shall be reimbursed for such Loss by Buyer as set forth in this Section 6. Notwithstanding the foregoing, Buyer shall have no obligation to indemnify Buyer's Indemnitees for Losses which, cumulatively, total less than $25,000, provided however that if cumulative Losses equal or exceed said $25,000, then Buyer shall indemnify Buyer's Indemnitees for all of such Losses. Liquidated Claims actually paid by Buyer under this Section 6 shall be limited to an aggregate of $5 million.

A. PAYMENT. At such time as the reimbursable amount of a Claim or a Third Party Claim has been determined in accordance with this Section 6 (a "Liquidated Claim"), the indemnifying party shall immediately pay the Person to be indemnified hereunder (an "Indemnitee") the amount of the Liquidated Claim.

No forbearance of an Indemnitee in demanding payment from the indemnifying party shall act as a waiver of any right of an Indemnitee to receive payment from the indemnifying

party, nor shall it relieve the indemnifying party of any obligation to an Indemnitee under this Agreement.

A. NOTICE OF CLAIMS. In the event an Indemnitee has any claim for indemnification under Section 6(a) or Section 6(b) (a "Claim"), it shall give

prompt written notice thereof to the indemnifying party, including in such notice a brief description of the facts upon which such claim is based and the amount thereof.

A. THIRD PARTY CLAIMS.

1. If any third party shall notify an Indemnitee with respect to any matter (a "Third Party Claim") that may give rise to a claim for indemnification against a party hereto (the "Indemnifying Party") under this Section 6, then the Indemnitee shall promptly notify the Indemnifying Party thereof in writing; PROVIDED, HOWEVER, that no delay on the part of the Indemnitee in notifying the Indemnifying Party shall relieve the Indemnifying Party from any obligation hereunder, unless (and then solely to the extent) that the Indemnifying Party is prejudiced.

1. The Indemnifying Party shall have the right to defend the Indemnitee against the Third Party Claim with counsel of the Indemnifying Party's choice reasonably satisfactory to the Indemnitee so long as (A) the Indemnifying Party notifies the Indemnitee within 15 days after the Indemnitee has given notice of the Third Party Claim that the Indemnifying Party will indemnify the Indemnitee as required by (and subject to the limitations of) this Section 6 for Losses arising out of, relating to, in the nature of, or caused by the Third Party Claim; (B) the Indemnifying Party provides the Indemnitee with evidence reasonably acceptable to the Indemnitee that the Indemnifying Party will have the financial resources to defend against the Third Party Claim and fulfill its indemnification obligations hereunder; (C) the Third Party Claim involves only money damages and does not seek an injunction or other equitable relief; (D) settlement of, or an adverse judgment with respect to, the Third Party Claim is not, in the good faith judgment of the Indemnitee, likely to establish a precedential custom or practice materially adverse to the continuing business interest of the Indemnitee; and (E) the Indemnifying Party conducts the defense of the Third Party Claim actively and diligently.

1. So long as the Indemnifying Party is conducting the defense of the Third Party Claim in accordance with Section 6(e)(ii) above, (A) the Indemnitee may retain separate co-counsel at its sole cost and expense and participate in the defense of the Third Party Claim; (B) the Indemnitee shall not consent to the entry of any judgment or enter into any settlement with respect to the Third Party Claim without the prior written consent of the Indemnifying Party (not to be withheld unreasonably); and (C) the Indemnifying Party shall not consent to the entry of any judgment or enter into any settlement with respect to the Third Party Claim without the prior written consent of the Indemnitee (not to be withheld unreasonably).

1. In the event any of the conditions in Section 6(e)(ii) above

is or becomes unsatisfied, however, (A) the Indemnitee may defend against, and consent to the entry of any judgment or enter into any settlement with respect to, the Third Party claim in any manner it reasonably may deem appropriate (and
the Indemnitee need not consult with or obtain any consent from, any Indemnifying Party in connection therewith); (B) the Indemnifying Party shall reimburse the Indemnitee promptly and periodically for the reasonable costs of defending against the Third Party Claim (including attorneys' fees and expenses), and (C) the Indemnifying Party shall remain responsible for any Losses the Indemnitee may suffer resulting from, arising out of, relating to, in
the nature of, or caused by the Third Party Claim to the fullest extent provided
in this Section 6.

A. DISPUTED CLAIMS. If Seller objects to any Claim or Third Party Claim, it shall give written notice of such objection and brief statement of the
grounds of such objection to Indemnitee within 20 business days after notice is
received. If no such objection is given, such Claim or Third Party Claim, as the case may be, shall be a Liquidated Claim. If such objection is made, Indemnitee and Seller shall meet and use their best efforts to settle the dispute in writing that when resolved shall be a Liquidated Claim.

A. SURVIVAL. The provisions of this Section 6 shall survive the Closing. Notwithstanding anything to the contrary in this Agreement, no Claim or Third Party Claim may be asserted by a Seller's Indemnitee under this Section
6: (i) with respect to Losses arising in connection with the obligation to pay
taxes, following the date of the expiration of the applicable statute of limitations for such obligation; (ii) with respect to a Loss arising out of or in connection with a License Agreement, following the termination of such License Agreement in accordance with its terms; and (iii) with respect to all other Losses, following August 31, 2000. No Claim or Third Party Claim may be asserted by a Buyer's Indemnitee under this Section 6, other than Losses arising
with respect to the Assumed Liabilities, following August 31, 2000. Notwithstanding the preceding sentence, an Indemnitee may assert a Claim or Third Party Claim under this Section 6 with respect to Losses that are the result of fraud or wilful misconduct by the Indemnifying Party at any time within the applicable statute of limitations for such claim.

A. The right of each party hereto to assert Claims and receive indemnification payments pursuant to this Section 6 shall be the sole and exclusive right and remedy exercisable by such party with respect to any breach
by the other party hereto of any representation or warranty or failure to perform any covenant required to be performed by such other party; PROVIDED, HOWEVER, that the above shall not prevent a party hereto from seeking specific

performance of a covenant which another party hereto has failed to perform under
this Agreement.

I. MISCELLANEOUS.

A. NO THIRD PARTY BENEFICIARIES. Except as otherwise specified herein, this Agreement shall not confer any rights or remedies upon any person other than the parties and their respective successors and permitted assigns.

A. ENTIRE AGREEMENT. This Agreement (including the documents referred to herein) constitutes the entire agreement between the parties and supersedes any prior understandings, agreements, or representations by or between the parties, written or oral, that may have related in any way to the subject matter hereof.

A. SUCCESSION AND ASSIGNMENT. This Agreement shall be binding upon
and inure to the benefit of the parties named herein and their respective successors and permitted assigns. Seller shall not assign any of its rights, interests or obligations hereunder without the prior written consent of Buyer.

Buyer may assign its right, interests and obligations hereunder to any Person provided that such permitted assignee agrees to be bound by the terms hereof and
to assume all obligations of Buyer hereunder.

A. COUNTERPARTS. This Agreement may be executed in one or more counterparts, each of which shall be deemed an original but all of which together shall constitute one and the same instrument.

A. HEADINGS. The section headings contained in this Agreement are inserted for convenience only and shall not affect in any way the meaning or interpretation of this Agreement.

A. NOTICES. All notices, requests, demands, claims, and other communications hereunder in writing. Any notice, request, demand, claim, or other communication hereunder shall be deemed duly given five business days after mailing if sent by registered or certified mail, return receipt requested,
postage prepaid and addressed to the intended recipient as set forth below:

If to Seller:

JTS Corporation
1661 Baypointe Parkway
San Jose, California 95134
Attention: President

Copy to:

Cooley Godward LLP
5 Palo Alto Square
Palo Alto, California 94306

Attention: Andrei M. Manoliu, Esq.

If to Buyer:

HIAC XI, Corp.
1027 Newport Avenue
Pawtucket, Rhode Island 02862
Attention: President

Copy to:

Hasbro, Inc.
1027 Newport Avenue
Pawtucket, Rhode Island, 02862
Attention: General Counsel

Copy to:

Wilson Sonsini Goodrich & Rosati
650 Page Mill Road
Palo Alto, California 94304
Attention: Eric W. Wright, Esq.

Any party may give any notice, request, demand, claim, or other communication hereunder using any other means (including personal delivery, expedited courier, messenger service, facsimile, telex, ordinary mail, or electronic mail), but no such notice, request, demand, claim, or other communication shall be deemed to have been duly given unless and until it is received by the person for whom it is intended. Any party may change the address to which notices, requests, demands, claims, and other communications hereunder are to be delivered by giving the other party notice in the manner herein set forth.

A. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the laws of the State of California as such laws are applied to agreements entered into and to be performed entirely within California by California residents.

A. AMENDMENTS AND WAIVERS. No amendment of any provision of this Agreement shall be valid unless the same shall be in writing and signed by Buyer and Seller.

A. EXPENSES. Each of Buyer and Seller shall bear its own costs and expenses (including legal fees and expenses) incurred in connection with the negotiation and preparation of this Agreement and the transactions contemplated hereby. Buyer shall, pursuant to Section 5(a) of this Agreement, bear all costs

and expenses of the recordation of chain of title to the Acquired Assets, including preparation and recordation of appropriate assignments of the Acquired
Assets.

A. CONSTRUCTION. The language used in this Agreement shall be deemed to be the language chosen by the parties to express their mutual intent,
and no rule of strict construction shall be applied against any party. Any reference to any federal, state, local, or foreign statute or law shall be deemed also to refer to all rules and regulations promulgated thereunder, unless
the context requires otherwise. Except as otherwise specified, references in this Agreement to Sections and Schedules are to Sections of, and Schedules attached to, this Agreement. Except where the context clearly requires to the contrary, "including" shall mean "including, without limitation".

A. SCHEDULES. The Schedules identified in this Agreement are incorporated herein by reference and made a part hereof.

A. TRANSFER TAXES. Any and all sales, use or other transfer taxes arising from the transactions contemplated by this Agreement shall be paid by Seller.

A. CONFIDENTIALITY OF INFORMATION. All information given to a party
by the other party in connection with this Agreement ("Confidential Information") shall be used only for purposes related to the consummation of the
transactions contemplated herein, and shall be disclosed to the receiving party's employees and representatives only on a "need to know" basis in connection with such purposes. If the Closing does not occur for any reason, each party shall maintain in confidence all Confidential Information of the other party, shall return to the disclosing party all tangible embodiments (and
all copies) of such Confidential Information and shall not use such Confidential
Information for any purpose; PROVIDED, HOWEVER, that the forgoing restrictions shall not apply to: (i) information that is or becomes a matter of public knowledge through no act or failure to act of the receiving party, its representatives or employees, (ii) information that becomes available to the receiving party from a source not under an obligation of confidentiality to the
disclosing party, or (iii) information that was known to receiving party prior to its disclosure to the receiving party by the disclosing party.

IN WITNESS WHEREOF, the parties have executed this Asset Purchase Agreement
on the date first above written.

Now, the question is, will Hasbro Interactive do anything worthwhile with Atari. I did notice that the computers were specifically listed as being part of the deal. It makes me curious that they specifically mentioned the computers (8-bit, ST, Falcon, and TOS), so does that mean there is some plan to use this for something? I mean, $5 million for Atari is a good chunk of money. I wonder who we can get to tell more of this deal. Sure enough $5 mil is not worth it for Atari's management......

Maybe Hasbro has a game system in the works and wants to use the Atari label.......

I'm sure in the coming months rumors will start to appear everywhere!

$5 million is actually a very small sum of money for the name alone, if the right people can act upon the right memories of the right consumers. That the computer lines are included is either complementary or central to their plans; that's what we'll be watching for. Don't necessarily expect anything right off the bat. Many wise investors, seeing an opportunity, act well in advance of any plans, buying when others are fleeing... a la Warren Buffet buying 20% of worldwide above-ground silver reserves recently. He's just waiting... he can afford to.

I thought I recently heard that Hasbro was laying off several hundred employees and closing a plant. I wonder if the Atari purchase has anything to do with this. Could be a refocusing of their management's vision. Hmmm... an Atari web-box? No reason you can't sell one today for $99.

Considering Hasbro's success with the Frogger remake (as lousy
as it was, it did sell), I bet Hasbro is just chomping at the bit to
re-release some of Atari's back catalog in anticipation of similar
success. Somehow I doubt Hasbro will do anything with the hardware, but
who knows. Maybe they will incorporate it into some kind of toy, like
a Pico-style device.

5 million is chump change for Hasbro, especially after just having
purchased Tiger Electronics last month (Feb 9th) for 335 million.
Which leads me to....

>Maybe Hasbro has a game system in the works and wants to use the Atari
>label.......

My conspiratorial mind is highly curious if there might end up being
some form of game.com / Atari collaboration now. Perhaps use the Lynx
technology to give the Com a much-needed shot in the arm?

>I'm sure in the coming months rumors will start to appear everywhere!

Why wait months when we can start now? :)

Not necessarily, the agreement merely spells out that Hasbro gets all
the
assets of Atari, from video games to computers. It doesn't mean Hasbro
is
going to release computers, just says they now own all the
rights/patents/etc.
to the computer line.

Essentially, JTS is transferring everything under the Atari label to
Hasbro.

who knows, but Hasbro has been trying to do their own game system for
God knows
how long...

They started with the VCR based system (Sewer Shark, Night Trap were
spawned from) and
not to long ago, where experimenting with an elaborate Virtual Reality
system that
suddenly went away......

I'm sure we'll know something perhaps by E3........

my best guess...

Didn't Hasbro already inherit the corpse of Coleco? Fifteen years after the 1982 home video game wars, the two big players end up as bunkmates. :)

```
: 5 million is chump change for Hasbro, especially after just having
: purchased Tiger Electronics last month (Feb 9th) for 335 million.
: Which leads me to....

Atually, for all that Atari embodies, $5 million is dirt cheap. The
question is, did they finally get rid of the Tramiel family...

: My conspiratorial mind is highly curious if there might end up being
: some form of game.com / Atari collaboration now. Perhaps use the Lynx
: technology to give the Com a much-needed shot in the arm?

Why would they want to do something with the Lynx, although it probably
was the cheapest portable game technology they could get, could make them
cheap now...

: Why wait months when we can start now? :)

Basically I see three scenarios....

1) They wanted the games, to follow the froger path...
2) They wanted the name for a new game system or other application...
3) They couldn't pass on the price with all of the pack ins they are
getting.... all of Ataris technology and patents for the last 20 years....
```

This makes sense too. First of all the Lynx is by no means outdated
considering how far handheld consoles go these days. Secondly no one
seems to want a Tiger Game.com, maybe they want and Atari Game.com.
Secondly, purchasing two game companies leads me to believe they have
something planned. Perhaps Hasbro will make a console, portable or
standard (or even liscense Project X) and use technology from both
companies or names to form something.

I would think the want the Atari name perhaps for something else. Maybe they want to release the Jaguar 2 and try to beat Playstation, in theory it is more powerful than current consoles and could compete with the next according to the few rumors surrounding it.

Once again TIFKAS (The Idiot Forever Known As Sinclap) is
feverishly reprising his paranoid ideas about "Atari Jihads" who are
"out to get him" - and now claiming that we're going to send an "assasin"
after him.

We don't have to, TIFKAS, because you are your own worst enemy - you
perform your own character assassinations every time you open your
mouth (that is, when your foot isn't in it) - and especially when
presenting your "facts" about Ataris, which consist of the same tired
old arguments which have been refuted over and over again in both this
and comp.sys.atari.st .

Besides, we don't know of any hitmen who'll do the job for $.50 :)

Thanks for the info. I read the document and one very interesting part
is
the fact that Hasbro will take the rights to the website domain
"atari.com"
It looks like Hasbro will be using the name Atari for something, but
what
that might be is still up for speculation.

When Atari bought into JTS there were many who said that Atari was DEAD!

It definately looks like some restoration will be happening.

Thank you Hasbro in advance for whatever you may do!

Hehehee.. I'm not sure I like any of them. Someone wanted to start some rumors, here is one. I guess you all know of VM-Labs which are supposed to cooperate with a number of big companies. I have no idea what Hasbro does, but maybe JHasbro+VM-Labs have something to do with this as well? :-)

Another possibility would be that it would be esier for a seconde company to buy out the computer part and TOS. As they sold the whole shit for 5 mill, I guess the computer part would be very cheap as I guess this is not what they were after in the first place.

Well, maybe IBM could buy the computer and release a PPC TOS box, or Compac or Dell could buy it just for the fun to rival Gateway2000? The price for the computer part would be a fart in space for those guys. :-)))))

Anyway, here you are.

If they aren't intrested in the computer line or TOS, perhaps we can see
TOS under a open license or even freely aviable. The same goes for the
hardware schematics, sadly there isn't much money left in a computerline
that was abadoned some 5 years ago, even if one as a enthusiast like myself
don't like that fact. Today people buys a PC not a homecomputer... ;-(But
perhaps Hasbro are more open than JTS where.

Just my 2 cents.

Regards..

It occurs to me that if we all pooled our money together, WE could have bought Atari! C'mon guys, 50 of us with $100K a piece could do it.

The layoff had to do with Hasbro doing away with unprofitable toy lines and
closing down an out of date factory. Nothing that doesn't happen from time to
time.

Whew! i want to say that I dont care if Hasbro does nothing with Atari. Just so long as Atari didn't die at the hands of the Trameils!!!! I hope this all works out and Atari escapes to Hasbro. JTS is about to be eaten by stockholders.

Yeah, why not? :) Seriously. not more than three months ago I was reading that Atari and the logo is still one of the most reconized brand names in the world. On par with Coke, and RCA. My pet theory is has Hasbro interactive/Tiger will become Atari for name awareness purposes. Rumors about a year ago were running around that Tiger was developing a console system. I imagine that, even with the bad press Atari has gotten, an Atari system will sell better than a Tiger system. In the short term, I imagine that we'll see retro games with Atari on it. Let me throw a few more logs in the rumor mill. (Mostly from speculation) 1. Notice that midway and WMS were spliting up? I wonder if Atari Games will come available for sale? hmmmmm... 2. Everyone is saying Project X. I think if that was the case, next Generation would be crowing louder. They know who the Project X partners are already. Oh the other hand, maybe thats why they didn't want to say to much back in Janurary. in either case, I'm sure we'll hear it there first. 3. Yars Revenge X... <drool>

I would imagine that the DirecTT060 from Computer Direct in Edmonton,
Alberta, Canada (info@compdirect.com) would be fastest this side
of the pond. Other than that, the Hades/Medusa
(http://www.stud.ee.ethz.ch/~caschwan/medusa.html) or perhaps the
Milan(http://www.atari.de/news.htm,
http://www.emmesoft.com/atari/hardi.htm) would be fast also.
The Hades/DirecTT may be up your alley because of the Star Track,
DSP-card.

Is that all of the reponse you received? Looks awful short, given
that these folks tend to be rather verbose when they get around to
making a statement. Beyond that, all I see is that they're saying
that not *everything* Atari-related was purchased. From the words of
others, the Atari arcade division wasn't included. The SEC statement
didn't mention anything about "Project X" either, so I don't know (and
doubt) if that was included in the deal. Atari seems to have quite a
few splinter groups - makes keeping up difficult for this old c64 fan
:)

Thats true, I suppose they could have let the site die if they had no
use for it, but since they took the site it would seem that they plan
on using it for something. I also noticed if I try to go to
http://www.atari.com it just sits hangs, claiming it is connecting, but
nothing becomes of it.

So perhaps we should petition Hasbro to make some of the old Atari
8-bit and ST stuff freeware.

Maybe make the custom chip details public, and license theem for free
non-comercial (or limited production, say under 1000 units) use.

Perhaps relase the source for the various operating systems under
something like the Netscape Public License.

I think we should think about what they could do that would:
a) make us hobiests happy
b) not provide any advantage to their competitors
c) not deprive them of potential future revenue
d) not cost them much of anything to release

(speculation)
10. Hasbro wants to sue somebody because they are copyright freaks. (Nobody interested in Atari has any money, so they can't get any money.)
Comment on sale of Atari to Hasbro.
From my point of view, it means that a large, active (in Atari) corporation now owns the rights to all Atari copyrights.
Being a bit paranoid, I'd suggest that any sites carrying Pac-Man, Star Raiders, or any other Atari held product should think about what Hasbro might want to do with those products, ie. be careful about having Atari products up for download. They may justifiably say such activities interfere with their ability to make a profit, even if the activities are without profit motive.

Guys,

In all seriousness, the Jaguar is DEAD, it will not be revived, there wont be a Jag II, forget any hopes on that, there is a possibility (slim) for the Lynx though. If there will be a console system it will be a Project X console or this rumor of a 68040 console, but guys get it through your heads, Jag is DEAD. I love my Jag but its DEAD. Look for Retro PC Atari titles and titles for other systems, and hope for a Project X licensing with Atari on the case and Atari Retro Project X software, THAT is the only reality here.

We all love the Jag, but it is DEAD, get used to it, no Jag in the future.

Perhaps the Atari 26000 ??? Maybe.

Curt

I doubt it. After all, why pay $5 million for all of the rights just to avoid licensing one of Atari's patents? Nintendo, Sega, and Sony are always bumping into one or more of Atari's patents every day, yet this doesn't bother them one bit.

>2) Hasbro is only interested in the game franchises so that they can make

I apologize if this sounds rude, as I don't intend it that way.

What amounts to the changing of hands of Atari ownership, IMHO, is pretty darn relevant to any Atari-related newsgroup. I would imagine that most Atari fans were elated at the news. Even though I don't know what plans Hasbro has for their newly acquired Atari properties (which, BTW, does include the ST line), I'd bet my bottom dollar that it's a whole hell of a lot more than what JTS has done.

I don't blame anyone one bit for crossposting. To an Atari aficionado, this is front page news; it deserves to be seen by anyone who shares even a remote interest in anything to do with Atari.

Wow... A once million dollar business, Atari has been sold for a mere $5,000 US... the once powerful dominator of the 80s video game industry has been reduced to $5,000... Do you know what Hasbro plans for the Atari Fuji symbol et al?

The Lynx is probably one of the primary reasons for the purchase. It's not really outdated when you compare it to the LameBoy.

You all might want to check out Jaguar Interactive II. There's someone there (who I believe is from Hasbro) posting much information on this deal. The Lynx is definitely part of it too...

As far as Notator SL goes, there is a big question there. I was told not to get the 16mHz ICD AdSpeed card installed in my 1040 because of presumed conflicts with Notator. Well I got it to work although I have a special boot routine disabling caches and whatever for MIDI usage.

Hallvard Tangeraas in Norway has found a way to run Notator on his MagiC-equipped Atari.

NOBODY has ever mentioned success at running Notator on any machine witht the 68030 processor however, be they TT of Falcon owners.

The Pak 30 upgrade board is supposed to have a native 68000 mode according to the OEM propaganda. HOWEVER nobody who has such an upgrade (they are relatively rare among the Atari community) has tried to run Notator SL and reported back to us here on comp.sys.atari.st.

Until such a reply to that effect gets posted, the Mega STe is tyhe most advanced form of Atari computer that yu can own and still run that MIDI software you like.

Did Hasbro buy Atari's patents? I read the sea doc several times and I don't
think they did.

>
> 2) Hasbro is only interested in the game franchises so that they can make

This I think is most likely. I would like to add that I can easily imagine
Hasbro Interactive changing its name to Atari.

As interesting as those three are, I think Hasbro marketing a Project X or M2
based console under the Atari name much more likely. Lets be honest, even an
upgraded Jag will not have the kick butt hardware needed to compete with
Project X and Sega's next system. As for the Handheld, I don't want to
believe it but i've been thinking. Isn't odd that Nintendo now annouces a new
color game boy (but no release date)? Nintendo had to know before we did.
Game.com was the only serious chalange to Game boy for years, improving its
technology with the purchase of another company should have been something
they were looking out for.

>

No way. They may become a software maker and maybe a video game hardware maker but I don't think anyone sane would chalange the PC market.

The best case fantasy for me would be: Hasbro Interactive and Tiger Electronics devisions would become Atari under Hasbro. The new Atari would sell software for computer and video game systems, sell the popular cheap LCD games, and release a game system based on Project X.

For $5000, one of us would have bought it ;-)

You forgot to add a few zero's to that figure. The Atari name definately has some worth left in it. Hopefully with the renewed interest in classic
gaming, Hasbro will capitalize on this. We'll see what happens though...

Think about it, guys. Didn't Project X's Jeff Minter state they had the backing of a MAJOR company at some point? Who's to say that major company wasn't HASBRO? If you think like I do, then I think you can start to see some sort of correlation here.

1) Project X is created by a bunch of former Atari Employees and aficiandos.

2) Project X becomes a rality, but is still secret, teasing us with the line: "We have the backing of a MAJOR corporation..." And, they're waiting for the right time to release it.

3) HASBRO buys Atari for $5,000,000. Hasbro is a huge company.

4) Hasbro now has the Atari name, products, trademarks, et al.

Theoretically, Hasbro could be that huge company Project X is signing onto, and they were working between Project X and JTS to get the name and the products so these former employees could use the Atari name on their new Project X. Granted, Atari isn't exactly an unsoiled name in the industry after the Tramiels got done with it, but if Hasbro and Project X can work this properly, I think it'd be a valid shot. This is also considering Hasbro would have the money to do an all-out advertising campaign, comparable to those of Sony and Nintendo. Enter the Lynx. The Lynx never had the following it could have had, and, being a color handheld with more power than any other, Hasbro has the library of games as well as the technology and advertising capability to really kick the Lynx's ass back into the ring. Also, third-party developers would be more inclined to develop for a well-advertised system, because it lowers the possibility of taking a loss on the venture. And...if Hasbro played their cards right, the Atari Jaguar could be resurrected as a 'low-cost gaming alternative' to the current array of systems. Open up the market for public-domain development materials on a larger-scale. It's a marketting idea for geeks, I know, but it'd reap rewards as being educational AND fun. And just think of all the developers that never gave the Jaguar a chance but could really get their name out on a larger scale if the Jaguar was indeed advertised and its games would get published on a regular basis? With a two-tiered philosophy (low-cost vs. premium) including Tiger Electronic's Game.com (low cost), Lynx (premium), Jaguar (low-cost), and the almighty Project X (premium), there's no doubt that they'd reap rewards off such a deal. The right time is now, people.

If this is some sort of underlying conspiracy, let the conspiracy begin!

> some old Atari games will come out in new updated software titles.
> Hasbro isn't a stupid little company.

The problem with everyone's speculations as to whether or not "Atari" can rise from the ashes is...public perception. I spent 13 years as a video game/computer software store manager. Up until a year and 1/2 ago. Problem is that right now the public, by and large, perceive the company called "Atari" (and they DON'T know the difference between Midway's Atari and Hasbro's Atari!) is for the most part a has-been company. An outfit that makes sucky products that are now being cleared out for $50 per console at a toy store chain. A company that used to be cool, but can no longer cut the mustard.

Obviously, NOT MY OPINION. But, realistically, the opinion of the vast majority of folks who spend $$$$$'s out there, and aren't "in the know". Mention Atari to anyone who owns a PSX or N64, and they start talking about the VCS they have in their attic. They would not dream that you could be talking about anything after that!

Obviously, for the name "ATARI" to become a powerhouse name once more, it will take more than a cook, killer console. It will take lots of well-done PR, probably in "stealth" mode (the public can't be aware that they're trying to have their hearts won back over to the name once more). Part of me thinks it will be much, MUCH easier to turn a new, different name into a powerhouse than it will be to find a way to rehabilitate the public's opinion's of an outfit called "Atari".

No, Hasbro will do much better pushing the trademarks of the GAMES that have names that folks fondly remember: Centipede, Warlords, Asteroids, etc. Even Yar's Revenge (which started life as a Star Castle home version) is still held in high regard with many folks going down memory lane. New versions or collections with these have a much better chance of making back the 5 mill that Hasbro spent, IMHO. Unless the public starts getting tired of the new 90's versions of old games. How far can that go, exactly?

Don't tell me that Hasbro is going to reintroduce the Jag console in it
current technelogical form considering that the Playstation kicks it and now
is in it's last legs of the product life cycle.

What really gets me is they seem to have paid $5 million for $45 million in Atari debt (and of course, the technology). They _really_ paid $50 million for the assets. They are obviously planning to do something real with it, simply suing for patent and copyright infringement and selling licensing won't generate that kind of revenue.

Secondly, I am puzzled by the omission of the TT in the hardware listing. I gues they just hit on the biggies (though I would think there are more TTs than Falcons), or is the TT an "ST".

I'm _still_ glad I sold the stock as soon as I came back up to break-even. JTS isn't looking too healthy is it?

But Tim - was the 'product' not a roaring success - in my view these fine products failed to attract a very large market share solely due to the lack of 'marketing' - most people never even heard of 'Atari' other than for the older games machines that were well promoted in their time.

When the 'Trammels' got involved in their money laundering operation (at least that's how it seemed) they made absolutely no attempt to 'market' the product - which - upgraded a bit for the times - could be successfully marketed today.

Or am I reading it wrong ???

Of course not. The Jaguar is a dead parrot. However it appear that Atari, the name and the ideal, will get yet another chance. Its possible that the Lynx may get a make over or that a cip or two from the Jaguar may get used in something but don't get your hopes up. I'm hoping for an updated Yars Revenge. :)

Well first they bought Tiger Electronics not Atari? Why would they buy
both unless they had something planned, would be too much a waste of
money. Game.com is not moving on shelves too well. Perhaps they want to
do something in the way of video games but need a largely remembered
name like Atari. Suing for patent and copyright infingement could get
you good money depending on who or what is involvled. If it is simply
Jon Doe's Video Game Inc infinged on the patent of a design of
something totally meaningless by todays standard, you wouldnt get much,
but if it was Nintendo, Sony or Sega you could fetch more (Atari did
once already on Sega) especially if it had to do with something in the
Playstation console itself that couldnt be changed they could claim
damages millions and maybe make quite a bit of money.

The only way they could make any money with Jaguar anymore would be to get the Jag/Jag CD combo out at well under $100. That way they could attract some 3rd party developers to the CD, but IMO it is too late in the current generation to make enough that way, especially now that the Saturn will be officially canned at the end of the month. Another problem is power, the Jaguar is supposedly more powerful than Saturn (the Jag CD supposedly allows optimum access to this power) but is still is not at the level of Playstation in 3D. It probably could turn out convincing 2D platformers and 2D fighters though. I think a Project X liscense would be a better bet for the Atari name.

Nah. Considering how desperate JTS is for cash, they could have gotten
the license for said technology much cheaper.

>
> 2) Hasbro is only interested in the game franchises so that they can make
> games for other systems using Atari owned characters and lisences.

This sounds very likely. Regardless of what else Hasbro may do with the
Atari properties, I am quite sure we'll see this.

>
> 3) Hasbro wants to enter the handheld game market and plans to rerelease
> the Lynx.

This also sounds possible to me. Purchasing Tiger shows they have an
interest in the handheld market, and perhaps even gives them a plant or
two to manufacture the Lynx in. Perhaps even the ability to fabricate
their own LCD screens? Should bring down manufacturing costs
considerably!

Wouldn't a faster, higher-resolution Lynx be cool? Woo-hoo! (Imagine a
Lynx with a 320x200 screen, running at double the clock speed, with 3D
support in hardware, and a built-in [or bundled] TV tuner, all for only
$99. I like it!)

But man, I really hope they don't try to sell it as the Tiger Lynx!
Yuck.

>
> 4) Hasbro wants to enter the home console market and plans to rerelease
> the Jaguar as a "budget" home video game console for around $50.

No way, they couldn't manufacture the Jaguar chep enough to really meet
this price point. And the Jaguar's dated technology and poor reputation
would really be unable to compete against the strong current market
share of the PSX and N64. I love my Jaguar, but I'm afaid it is too dead
for this.

>
> 5) Hasbro wants to enter the home console market and plans to release
> an upgraded Jaguar to compete against the N-64 and PS.

Well, the Jaguar II design (AKA Project Midsummer) was completed, and
was supposedly quite powerful. I believe the hardware could compete if
they came up with some good software for it. But I would sooner bet that
Hasbro is a Project X licensee then say they intend to revive the
Midsummer architecture.

>
> Fantasy: (In order of what I'd most wish for)
>
> 1) Atari will be fully revived and once again take it's rightful place

Any notion of Hasbro putting the Atari logo on a piece of hardware
pretty much goes hand-in-hand with this one!

>
> 2) Hasbro wants to make a very cheap hand held game machine. What they

Never happen. And personally, I'd rather see the Lynx come back. Though
it would be cool to see a 2600/7800 emulator for the Lynx. You could
easily cram a couple dozen games on a single Lynx cart, along with the
emu software. (Hey, it could happen - the Lynx does have a 6502-based
CPU, after all!)

Possibly! ;)

Project X (I think it is also called Merlin) is a new game system designed by VM Labs. Many former Atari people worked on the design, including one or two of the engineers who designed the Jaguar and Midsummer machines, and programmer Jeff Minter (Tempest 2000, Llamatron, Defender 2000, and so on.) And Bill Rehbock, another former Atarian, left his position at Sony to head up the recruitment of third party developers for Project X.

The marketing model sounds similair to the 3DO - multiple manufacturers sign a license to build hardware. There are supposedly several "Sony sized" manufacturers already signed on, but the only one known at this time is Phillips. They have said we will learn a lot more at E3.

It is the clear Atari connection to the hardware's designers that makes many people feel like this console will be the unofficial heir to the Atari legacy. In fact there was a rumor that Phillips was seeking to license the Atari name from JTS for their model of the Project X console. So while their is no concrete connection between Project X and Hasbro's purchase, many of us hope that there will bo one eventually.

> called "Atari".

I've think you've got the right idea. Stealth PR is not a bad idea.
Besides, I think we can all safely say that Atari's public enemy #1 is
the press. Judging from the Jaguar press that was received, "Jag is not
64-bits" "Jag is 16-bit" "Jag uses two 32-bit processors in tandem"
yadda yadda yadda. Basically I think the Atari name needs to stay out of
gaming magazines since most of the writers for these magazines are
idiots.

Basically, good private PR and a big CES showing would be the prescribed
medicine.

I wouldn't get my hopes up for any more Atari Computers period. After all, Atari computers division lost all of their computer development team (that's the ST/TT and Falcon crowd), they'd either have to track down the old people (which have jobs elsewhere) or get new people (which would require training/learning time).

I think it far more likely that we'll see Atari games for the PC or other platforms, and possibly a re-release of the Lynx or something of the sort.

That is an all-too-common theme of many of these messages, but lets be realistic here. Granted, the Tramiels marketing blunders obviously doomed TOS to eventual failure in the marketplace, but without the Tramiels, Atari would have been dead and burried in 1983 after Warner Communications ran the company into the ground. Without the Tramiels, there would have been _NO_ Atari 130XE, 520ST, 1040ST, Portfolio, STe, MegaST, SLM804, MegaSTe, SLM605, TT030, Falcon, Lynx, Jaguar, etc.

As frustrating as all the Tramiel's marketing blunders obviously are to us diehard Atarians, keep in mind that without them, we wouldn't even have had any of these incredible systems. Because of these systems, we Atarians were able to enjoy user-friendly operating systems and software a full decade ahead of the rest of the personal computer industry, and a reliable, frustration-free operating system that is still unequalled even by today's most current systems.

<350C6FA3.5232DD7C@chicagonet.net>...

> Are Atari computers or Atari clones still made?

Atari Computer Corp. is no longer in business, so new systems are no longer being manufactured. There were a couple of companies making clones for a while, but they may now be about as hard to find as an original new Atari system itself. There are used Atari systems available however, from both private parties and dealers.

> If so, who sells them?

This newsgroup is a good place to start. Let us know what you're interested in, either system wise or application-wise and I'm sure someone will be able to assist you.

> Why would I chose an Atari over a Mac, PC or an Amiga?

Any computer is only a tool, and like any tool, it is worthless without a task to perform. What do you want a system for? What do you want to do with it, and what software applications will you need? And, of course, how much do are you willing to pay for a system? Each of the above systems has its plusses and minuses; it all depends on what your needs are.

From: dreibel@idirect.com
Message-ID: <350ca22d.3@diana.idirect.com>
Source record: 5333

As with any computer, storage of your ideas, as well as having media for quick and handy access to your your most-used programs and files, is a must for efficiency and time. And now, thanks to lower prices and improved technology, even the oldest classic Atari computers can take advantage!

At the March 18th TAF meeting our focus will be how to build your own SCSI-based hard drive in a PC case - we'll show you the parts and software you need, where to find them, and how to configure and put it all together. We'll also discuss the variety of options to hook up to your new SCSI system, including CD-ROM (did you know that at last count there are over 50 Atari-specific CDs to choose from?), removable media like ZIP and Syquest drives, tape streamer drives, and even flatbed scanners!

If you're still booting from floppies, your original Atari-specific hard drive is wearing out, or have ever been curious about how a hard drive system can give your classic Atari improved usability, this meeting is not to be missed! See you there!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

That simply isn't true. The Atari ST was a cheap design. It was designed too quickly with no real innovation (try to think about the Sinclair QL, which was almost the same design and was produced 2 years before, or about the Amiga which was first introduced as a prototype a whole year before the ST).

The Tramiel management was very chaotic. They failed in marketing the computers. They also failed in designing them (come on, the Mega STs were more or less multi-megabyte memory STs in a new box, no magic here). They had this poor policy of making announcements about new designs years before actually producing them (or even not producing them).

Also, the Lynx was not created by them. It was bought from Epyx.

Granted, without the Tramiels, Atari's story would have been very different : we don't know who would have bought it back from Warner. But the Tramiels leading Atari was a total failure.

As for the Lynx and the Portfolio they were both developed from other
companies. Everything the Tramiels did, was to buy the rights and to
sell them under the ATARI brand name. There were no improvements done by
ATARI.
So if the Tramiels hadnï¿½t bought the systems other companies would have
done this.

Hasbro bought Tiger because of their excellent position in children's electronics. Tiger makes tons of handheld games, including all of the game show units (Wheel, Family Feud, Jeopardy!, etc.), Giga Pets, and the children's educational "computers" (they are the only real competition to V-Tech). Hasbro is trying to keep up with Mattel in the toy industry; both are running around buying up all of the smaller toy companies that complement the businesses that they already own. Tiger was attractive to them because they really don't have anything in the way of handheld electronics or kid's computers. They also got ahold of the game show licenses, which their other divisions can use, like Parker Brothers, Milton Bradley, and CAP Toys (candy - you've probably seen the Connect Four and Monopoly candy...expect more!)

Tiger was also bought by Hasbro, Inc., while Atari was purchased by Hasbro Interactive. This may mean nothing, but it may signal that Tiger is considered more of a toy company to Hasbro, while Atari is considered

more of a software company. I personally would expect HI to use the software licenses first, making new versions of the titles that they now own, then maybe look at the videogame market to see if it is a viable market for them. They don't own facilities to make something as large as a CD console system and would not be able to make one as cheaply as someone like Philips, but they might license the Atari name. The portable market is about to change a bit with the new Nintendo color portable, so if they're smart, they will wait and see what happens there. Just my $0.02 (still $0.02 with tax!!)

I don't know if I'd classify the ST as a "cheap" design. After all, some prominent computer experts, including Dr. Jerry Pournelle, liked the ST more than the Amiga. However, it may be true that it was put to market too early. Early models didn't include the BliTTER, for example...

I suspect that what happened with the ST is that since Amiga was slipped out from under Atari by Commodore, they wanted to have a product to compete, and wanted to get to the market at or before the Amiga made it so that they would have a fighting chance.

It's already started in PC's, where the advice "buy as much machine as
you can, to avoid obsolescence as long as you can" has been replaced by
"buy as cheap as you can since the most expensive system will be
obsolete next week anyway." Accordingly, the $1000 and under PC's have
taken off by some estimates to equal up to %70 of sales. The only
problem with seeing this extend to game consoles is that their $150 to
$200 cost doesn't carry the sticker shock of PCs' considerably higher
price tags, making a cheaper "oldie" console (a Super Nintendo, for
instance) not that attractive to gamers demanding the latest.

This just in from Next Generation Online:

"From the first time today, Hasbro Interactive officially announced
its acquisition of key Atari videogame licenses. The assets purchased
by the company include games such as Centipede, Missile Command, Pong,
Breakout, Battlezone, and Tempest. For only $5 million the company
scooped up the rights to more than 75 Atari properties and hardware
platforms.
Hasbro currently has plans to develop several of these games on both
the PlayStation and PC. The first of these titles scheduled for
release will be Centipede, which will hit both platforms this fall.

"These ground-breaking games helped pioneer the videogame industry,"
Tom Dusenberry, president of Hasbro Interactive said. "We intend to
bring these classics back to life by updating them with the latest
technology and interactive game design, while preserving their heart
and spirit."

The company is also considering development of these titles on the
Nintendo 64, and will likely develop handheld versions of these games
via the Tiger Electronics division it recently purchased. At $335
million, the acquisition of Tiger's electronic division was costly,
and Hasbro will likely use its newfound licenses to shore up some of
the purchase costs."

====

So it appear Hasbro bought Atari for the games. I kinda hoped they
would have annouced that they would use the Atari brand name for the
games. Who knows, maybe they will. I'm happy to see updated classics
but I can't help be just a tiny but dissapointed. Time will tell.

That is EXACTLY what they will do. Anyone notice the popularity of the rerelease of Frogger for Playstation and PC? Hasbro is going to revamp and rerelease some of the old Atari games like Missile Command in similar fashion. I wouldn't expect to see a new atari-branded console from them, though. Read more in today's Wall Street Journal, by the way. Good story about the deal that even mentions retrogaming's current popularity (it talks a little bit about the MAME arcade emulator in there).

Nor a floppy disk drive :-)
Let me clarify my statement about "cheap" design. The ST family of home computers was not revolutionary: basically it was just a 68k computer running a modified version of Digital Research OS. The software was not new. The concept was not new either (Apple Lisa and Macintosh were the first commercial implementation). The hardware was not new (Motorola 16/32 bits microprocessors were first introduced in 1978 if I recall correctly). What really made these computers interesting was the price. Thus, it was the cheap design that made their commercial success.

At the time, Sinclair had been producing a multitasking (even if it was just task switching, really) computer running a windowed environnement on a Motorola 68008 (8/16bits microprocessor). The machine had its share of problems (mostly production) but it was more or less an ST-like, only introduced years earlier. It was low-priced, too.

The Amiga had just been introduced. It was basically the same design as the ST, only with the technical edge given by the specialized ASICs and the true multitasking environnement. (Jack Tramiel's) Atari had forked $1 million (or was it 10?) to help it's development. Commodore offered more money than Atari (by an order of magnitude) to buy the design. This other Atari failure forced them to create the ST.

> I suspect that what happened with the ST is that since Amiga was slipped
> out from under Atari by Commodore, they wanted to have a product to
> compete, and wanted to get to the market at or before the Amiga made it
> so that they would have a fighting chance.

Yes exactly. But Atari didn't ever catch up with the Amiga technology. It had it's share of success (mostly due to the popular MIDI interface and cheaper price tag at the begining of the ST life), but the Amiga became slowly more popular after the Amiga 500 was introduced.

The point I'm trying to make is that, for the first two years, Atari sold a lot more STs than Commodore sold Amiga. They had the money to evolve the ST and to create radical new designs. They had the market advantage. They didn't use it to get the technological edge. They just created cheaper designs when they were in the position to revolutionize the computer industry.

Why is it that some "Dweebs" have no ability to only post a message in one newsgroup only? They seem to have a penchant for crossposting their "Drivel" in as many Atari Newsgroups aas they can and thus we get to see the same damn message in 5-7 newsgroups. Sure makes me want to stop importing the COMP.SYS.AARI, etc nesgroups into the BBS. I'm only going to post this message in this newsgroup to see if the "Dweebs" responsible get the picture.

: That simply isn't true. The Atari ST was a cheap design. It was designed too
: quickly with no real innovation (try to think about the Sinclair QL, which
: was almost the same design and was produced 2 years before, or about the
: Amiga which was first introduced as a prototype a whole year before the ST).

Absolutely. The ST and TOS were designed, built/programmed within one year.
The guys from Atari just used a user-interface written by Digital Research
for the PC and wrote a kind of MS-DOS-emulator they called GEMDOS.
The Amiga for instance was far superiour both in hardware and in software
design. The Amiga OS was fully pre-emptive multitasking, had dynamically
loadable libs (or something like it), etc, etc. The hardware for graphics
and sound was also a lot better (DMA stereo sound, hardware sprites, fast
blitter, more colours...)
The main things that made the ST series still sort of a success were the
built-in MIDI ports, the ability to use a nice monochrome-monitor and maybe
the MS-DOS compatibility (diskwise)...

Lets see... The story is from, I believe, Video Games and Computer Entertainment. When Atari came in, the Lynx was still nothing but a bunch a hand wired boards connected to an Amiga. Nothing was done in the way of prototypes, figuring out battery usage, nor where to get color LCD screens. Atari originally was just helping Epyx out with the idea it was going to be join project but once it appeared that the project wasn't going fast enough, Atari bought the Lynx from Epyx out right and finished the project.

Amiga was a 16 bit equlivent to the 8 bit 800. Both designs involved
thework of Jay Minor, he pushed for a 16 bit design. Amiga development
stalled
because projections showed that the cost of completing the development
was too high and simply no one was willing to risk taking the plunge.
The Amiga wasn't "slipped out" from under Atari, it sat idle for a
significant
time. Jack Tramiel brought the design for the ST. with him from
Commodore
and that is what Atari developed. The Amiga company was later acquired
by Commodore and development was completed. Initially Commodore withheld

information about the operating system to insure their ability to
maintain
control over the computer, but this had the undesirable effect of

slowing
sales due to the small software base.

The Tramiel philosophy was "Power without the price" Tramiel wanted to
bea business success not lead the technological front. Again he said
"Business is war!" I don't necessarily agree with this philosophy but
that is how
Atari was handled.

Whether or not they bring the Atari name to hardware remains to be seen. If they are indeed a Project X liscensee they certainly would not say so, that is hush hush information. Secondly, if the Game.com fails they may attempt to revive their handheld market under the Atari name.

Just for thought, has anyone ever considered calling a 2D game 3D because it is playing from a Picture Tube which in itself is 3D? That would be funny, by that definition, all side scrollers would now be considered 3D games.

Some games have already been revamped. It certainly would take some serious thought for me to go out and by another revamp of Missle Command after Missle Command 3D unless it was a masterpiece of some type.

I don't mean to be annoying, but doesn't the description:

"1-dimensional games that only last 3 minutes"

apply to just about any console game? In general, I have always preferred computer games to console fighting, platform, and other low depth genre's. With games like AvP, the Jaguar had the potential to bring more computerish titles to the console market, but they instead dropped that sort of development in favor of SNES style titles.

Unfortunatly I think using the Atari name would doom any product
released. Most of the gamers out there still have bad memories of
ATARI. Need I mention E.T.? or the Jag? I like my Jag I still play it
but because Atari screwed it up it is now dead. So any use of the
Atari name could prove fatal for any system, no matter how good it is.

That sort of logic implies that Sega may as well just slose shop today, since their last two major products also died off quickly. The Atari name is still seen favorably - I can't count the number of times I have had to explain to people that the Atari in the arcades is NOT the Atari that made the Jaguar. And the retro gaming thing has heightened the perception of Atari as well.

This sale is getting mainstream news exposure. If the Atari logo appears on a new piece of hardware, the gaming public will know that it is "under new management".

Besides, I really don't think the majority of people out there is stupid enough to simply say "Atari? everything they make sucks" without first finding out what is going on. If Hasbro spends the money on good marketing to generate some positive hype, and on making some good games for any new hardware they make, then the Atari name will once again be embraced by the public. (Hey, Ford bounced back from the Edsel and the Pinto, didn't they?!?)

Hey I had a PInto too - very reliable, I loved it. But that little
problem with those flammable cheerleaders was a public relations
disaster that really dragged Ford's name through the mud.

Probably likely that the Project X team doesn't want the Atari name
anywhere near their product...

Actually, all computer games are 2D because the CRT has a disply that
is is only two dimensions. In order to be true 3D, one would have to
use one of the available stereoscopic methods like LCD shutter glasses
and such with it.

Hehehe.

No, that cannot be theoretically possible because the Phosphers on the CRT must be a few molecules thick, hence they are 3D, therefore the 2D game is really 3D. My theory on this would only make sense if you are a cheap skate video game company trying to make money by calling 2D games 3D. I wonder if it could be argued in court ;) Think of it this way most CRTs are not flat, they are rounded meaning they are actually 3D. The phosphers must be 3D anyway you put it because they have some height width and depth. Therefore the phosphors are 3D. If you display something on 3D it must be 3D. The CRT itself is also not flat, the electron gun sticks out the back, but relating the fact that a 3D setup is projecting images than the image must be deduction be 3D. Pretty interesting theory isnt it? Now I need someone to argue the 1D games for me...

Just dandy. The rights to most of the classics now belong to the same people
who shat upon the once-respected name of Frogger while "updating it with the
latest technology."

Oh, my cup runneth over.

jeff. Updating classics can work (cough cough T2K), when
it's done _right_. Hasbro doesn't have a clue how.

Thanks for the response Sheldon.

I am a former Amiga user, and I am currently a Mac user.

I am disappointed to learn of the current state of the Atari. My last contact with it was in 1993 to 1995, where I saw it being used as the electronic cash register and inventory system in a store called "Software Plus" in Chicago. The store carried PC, Amiga and Atari products. I have many receipts for Amiga purchases, that were printed out by that Atari system, which if I remember right was running dBase (or something that put out files compatible with dBase).

About a year ago, I would browse through a magazine called "ST Format" in my favorite magazine store. I remember seeing stories on multitasking OSes, and Atari clone makers.

I asked my question not so much to find a system to buy, but rather out of curiosity. I know the Amiga community is revving up, and I was hoping the same was true for the Atari community as well.

Do you see any hope that the Atari will be revived? Are there any compelling reasons why it should or should not be?

1661. SPAM Filters...

To ALL those "DIPZOIDS and DWEEBS" who persist in posting to ALL the Newsgroups in COMP.SYS.ATARI.* instead of just ONE and only ONE Newsgroup, (You know who you are, you can tell by the addresses that show a dozen newsgroups the message is posted to), BE WARNED.... New SPAM Filters that are about to be implemented by both Providers and Industry in general, will make your messages... a bunch of nothing electrons.

There is no point in cluttering up the newsgroups with the same message posted to 6-12 different newsgroups of the same ilk. People interested in Atari will read ALL the Atari newsgroups and it is really anoying to see the same damn message posted everywhere. If the Internet were run like a BBS, you IDIOTS would be Blacklisted.

There is NO REASON to Post to a half dozen nesgroups and there is no reason to reply to a message to a half dozen newsgroups. Keep it down, The New Filters will spot any message that is posted to more than two (or whatever the operator or provider sets it to) and delete it, as it will be considered SPAM. Learn to use the system like a BBS and all will be well.

BTW... the Sale of the Atari stuff by JTS to Hasbro is really a non-event in the world of business and computing. Let's knock of the dreams and speculation and posting crap like that in every nesgroup. let it run it's course and the Atari name will surface on CD-ROMS for the PeeCee. Just like in the old days.

Get the idea kiddies?

Maybe there were some old prototypes in that sale. Or maybe they don't really want the 8 bit stuff and we could pick up the rights or a couple a bucks.

Back to reality. I thing most people still think of the good old 2600 and the fun they had with it if they hear the name Atari. That might be good. Atari has been synonimous with "we make great products, but let's not tell everybody" ever since.

Hasbro on the other hand is very famous (well, the products more then the company name), they are the guys from "transformers" and such aren't they?

Hmm, computers transforming into Robots???? "I'm no XE, I'm Optimus Prime." Damb, where gonna have endless discussions with our computers about the ethics of changing their Operation Systems, CPU, etc.

(Hey, maybe if you're lucky enough to have this cool (but not Brainless) Transformer, you'll be greated with "Yo dude, Check out those >beep< pictures I downloaded for ye!" :-)

I have read quite a bit about Hasbro buying Atari in the last week. I have seen a lot of misinformation on the newsgroups, so I thought I would put in some facts:

Hasbro bought Atari assets for $5 million.
These "assets" include the rights to 75 video game titles (they do not include any rights to redistribute computer or videogame hardware - this means that Hasbro cannot "reintroduce" any 8-bit Atari computers, ST computers, or Jaguar consoles, redesigned or not.
One article I read mentioned that these games would be marketed under the title "Atari Platinum Series" - that is probably the extent to which we will see the name "Atari" on any of the new products.

1668. Activision's Battlezone

Newsgroup: comp.sys.atari.advocacy
Date: 1998-03-20 00:00:00 UTC
From: jim <jim@studio9.demon.co.uk>
Message-ID: <3511C3B7.D9B8D727@studio9.demon.co.uk>
Source record: 5428

Activision are pushing their revamp of Battlezone just now ... where does this fit in with the Hasbro deal? A timely reminder from someone who knows more than me re: Activision/Atari history would be appreciated.

Looks like Hasbro's purchase is a software one ... a shame. I didn't expect any new 'computers' but it would have been exciting to see Atari on some gaming hardware. One flop from Hasbro (quite likely given Frogger'97) and that really will be the Atari name dead and buried!!

Jim.

re: 3d vs 2d...

Your argument regarding "since the projecting apparatusis 3d, then the image must be 3d" breaks down when you consider a slide projector. When it projects an image to a theoretically perfect screen, the image itself has no depth unless you look at light as a particle. But so far we have not been able to resolve the particle/wave dispute. My own idea is that it is something _else_, that we as humans in our particular frame of reference cannot see it as it is. Perhaps it is 4-D or more in nature, and humand find it difficult at best to perceive more than 3 simultaneous dimensions.

>
>The Canadian Curmudgeon (in cool, cloudy, Calgary)

I'm just a little bitter from what I consider being betrayed by the Trammels. After hearing so many times that 'this year' would be 'the year of Atari' only to see them only market in the New York City area or maybe a couple of other local areas, it burns me up. I tried to do my part by buying hundreds of dollars worth of hardware and software only to see it become worthless as fewer and fewer places supported the platform. I hate being at the mercy of Microsoft. But what's the alternative? Even the Mac may not last much longer. I suppose if my needs were simpler, I could get by with my old 520 ST running Word Up etc., but for my needs, it won't do. There- I got that off my chest.

Tim

I have a selection of Atari ST titles for sale.

This List Updated 20/3/1998.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...
Atari CD ROMS, 16-bit sampler cartridge/hardware etc...

All are on original media.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^

Prices DO NOT include postage.

GAME COMPILATIONS

Hollywood Collection (5d,ni) 5
Ghostbuster II, Indiana Jones and the Last Crusade & Robocop
TNT (4d) 5
Xybots, Toobin, APB, Dragon Spirit and Hard Drivin'
Finale (4d) 5
Paperboy, Overlander, Ghost'sn' Goblins
and Space Harrier (20 levels)
The Dream Team (5d, ds) 5
The Simpsons - Bart v' The Space Mutants, WWF Wrestlemania and
Terminator II 'Judgement Day'
Atari 520STE Discovery Xtra Pack 5
Language Disk DE1 (ds)
Final Fight Disks DE2 & DE3 (ds)
Sim City/Escape from the Planet of the Robot Monsters (ds)
9 Lives (ds)

SPORT TYPE GAMES

World Championship Soccer (1d,ds,nb) 2
Ballistix (1d,ss) 2
Superleague Soccer (1d,ss) 2
T.V Sports Football (1d,ss,nb) 3
Vector Championship Run (1d,ss) 2
Championship Wrestling (1d,ss) 3
Top Shot = Kick Off + Extra Time. (1d,ds) 3

SIMULATIONS

ATFII (Atdvanced Tactical Fighter II) (1d,ss) 2
Lombard RAC Rally (2d,ss,nb) 2
Falcon - The Mission Disks Vol.1 (needs Falcon) (1d,ss) 3
Their Finest Hour -The Battle of Britian (2d,ds) 5
Carrier Command (1d,ds) 5
Mig-29 Fulcrum (1d,ds,meg) 5
F-15 Strike Eagle II (2d,ds) 10
Railroad Tycoon (2d,ds,meg) 10

STRATEGY, MIND AND ADVENTURE

Alpha Waves (1d,ss) 2
Go-Moku/Renju (1d,ss) 2
Federation of Free Traders [F.O.F.T] (2d,ss,nb) 2
Conflict Europe (1d,ss,nb) 2
Crash Garrett (2d,ss) 2
Archipelagos (1d,ss) 2
Tower of Babel (1d,ss) 2
The Quest for the Time-Bird (3d,ds) 2
Quizam! (2d,ss) 2
Lords of Chaos (1d,ds) 3
Driller (1d,ss) 3
Populous (1d,ss) 3
Borodino (2d,ss) 3
'Nam 1965-1975 (1d,ds,nb) 3
Pirates (2d,ss,nb) 3
The Kristal (2d,ss,nb) 3
First Contact (2d,ds,nb) 3
Airborne Ranger (2d,ss,nb) 3
Murder (1d,ds) 3
Knightmare (2d,ds) 3
Lemmings (1d,ds) 3
Corporation (2d,ss) 3
Mega-Lo-Mania (2d,ds) 3
Elite (1d,ss) 5
Terrorpods (2d,ss) 5
Loom (3d,ds,nb) 5
Jinxter (1d,ss) 5
The Secret of Monkey Island (4d,ds,meg) 5
Ishar 2 (3d,ds) 5
Populous II (1d,ds, meg & 512k versions) 10

Lemmings 2 - The Tribes (1d,ds,meg) 10
Elite 2 - Frontier (2d,ds,meg) 10

ARCADE

Skweek (1d,ds) 2
Defenders of the Earth (2d,ss) 2
Eliminator (1d,ss) 2
Wrangler (1d,ss) 2
Hard Drivin' (1d,ss) 2
Yogi Bear & Friends In the Greed Monster (1d,ss) 2
Blazing Thunder (1d,ss) 2
Mig 29 Soviet Fighter (1d,ss) 2
Fast Food (featuring Dizzy) (1d,ss) 2
Whirligig (1d,ss) 2
Hellraider (1d,ds) 2
Outrun (1d,ss,ni) 2
Bad Company (1d,ds) 2
Rambo III (1d,ss) 2
Mean Machine (1d,ds) 2
The Light Corridor (1d,ss) 2
Last Ninja 2 (1d,ss,nb) 2
Voyager (1d,ss,nb,NSTE) 2
Ghostbusters II (4d,ss,nb,ni) 2
Hellraisers (2d,ss,nb,ni,NSTE) 2
Legend of the Lost (2d,ss,nb,ni) 2
The Last Shoot-'em Up (1d,ss) 2
Time Bandit (1d,ss) 2
Robocop (2d,ss,ni) 2
Popeye 2 (1d,ds) 2
Flood (1d,ds) 2
Hong kong Phooey (1d,ss) 2
Steg the Slug (1d,ds) 2
Panza Kick Boxing (2d,ds) 2
Cloud Kingdoms (1d,ss) 2
Cabal (1d,ss) 2
Moonwalker (2d,ss) 2
Shadow of the Beast (2d,ds,ni) 3
The New Zealand Story (1d,ds) 3
Midnight Resistance (1d,ss) 3
Prince of Persia (1d,ds) 3
Hudson Hawk (1d,ds) 3
Golden Axe (2d,ds) 3

Not that I'm disputing this, but doesn't the official papers say that they also have the rights to all the hardware they developed, including the computers and consoles?

On another note I'd be surprised if they released anything under the Atari name; I would have thought they bought the assets for the patents that Atari has been making from all the law suits.

Huh? If a game has x and y movement, it is two dimensional.

A vector used to describe the velocity of the "Pong" ball or "Combat"
bullet would need both x and y components.

You're turning simple math into something difficult.

Later,

Dan

Thorne (ethorne@chicagonet.net) wrote this...
> Are Atari computers or Atari clones still made?
>

Absolutley. Atari is dead and buried as far as computers are concerned,
but the computers are still alive. we are talking about Atari TOS clones,
based on the TT but with 040 and 060 Processors. The only ones currently
available are the Hades computers:

The 2nd hand market is the place to look for a TT or a Falcon, which are
still very nice machine by today's standards.

> If so, who sells them?

For the Hades clones, check out:
http://www.stud.ee.ethz.ch/~caschwan/medusa.html
The Milan clone (soon to be released):
http://www.milan.atari.de (the site is not finished yet)

>
> Why would I chose an Atari over a Mac, PC or an Amiga?

That's up to you, it's all a question of feeling. Over a Mac or PC, you
have the advantage of feeling different. Software is usually easier to
use than on an Amiga, and the system is a whole lot simpler. Besides,
most of the stuff being second hand, an Atari is much cheaper. You
certainly won't spend as much money on upgrading your hardware as you
would on a PC.

Edwin,

> Do you see any hope that the Atari will be revived?

Extremely doubtful; not at all likely.

> Are there any compelling reasons why it should or
> should not be?

Atari systems were always fun and easy to use -- truly user friendly with a real 'plug-and-play' interface. They made excellent use of available RAM and with the basic operating system in ROM, they were incredibly fast for their time. Even by todays standards, Atari's TT030 systems (introduced in 1991) are still very capable of performing serious applications efficiently. I'm still using several of them myself, and will continue to as long as my current software continues to remain viable.

But todays systems are mere tools, made useful by the software applications fed into them. Like it or not, WindowsNT/95 has become the industry standard for personal/home computers, and that is the platform for which virtually all new software is being written. As bad as Windows95 is, and I despise it as much as anyone, it _is_ the industry standard. Bill Gates has won the war, not through superior products, but through superior marketing. Yes, there will probably always be a small niche market for alternative systems, but it is extremely doubtful any of them will become serious competition for the Microsoft monopoly -- at least not in the forseeable short term future.

Sheldon, did you happen to read John Dvorack's (sp?) last column in PC
magazine? He is predicting that Compaq (worlds largest PC retailer) and
Intel (worlds largest chip maker) will combine, create their own OS (that
will still be backward compatible) and run head-to-head against Gates and
the MicroSleaze monopoly. Heck, if that happens, I might even be convinced
to buy one! <grin>

Of course this depends on whether or not the Justice Dept. breaks Gates
Gang up... ;-)

Knowing the American penchant for 'rendering unto Caesar' - I doubt
the Excited States Justice Department has the power to do that any
more. Gates gives to much in 'political contributions' to get
anything more than a 'slap on the wrist' from the authorities.

But then, I'm a cynic !!!

Sounds like it might just be a 'Windows Clone'. If so, you can bet
Microsoft will change something or other in their code to break the
competitions compatibility. Gates has never been known to play fair with
the competition.

Actually, the real problem Gates is having with the Congress is the fact
that he HASN'T taken an active (financial) interest in national politics --
at least not to the extent that the politicians feel he is financially
able.

Sheldon

Hi Ian

Have you tried using Newsie, this is for TOS based machines as with it
you can access your email, newsgroups & ftp and you can make postings.

As this proves:)

You can get Newsie from the following url

http://www.primenet.com/~rojewski/newsie.html

If I can be of further assistance, just ask:)

Cheers! for now

This is an election for the seat of an *Amiga* users representative in
the ICOA (Industry Council Open Amiga), please keep your drivel in the
appropriate newsgroup (follow-up set to comp.sys.amiga.misc).

I don't see any reason why you are asking for votes from Non-Amiga-users
in an Amiga User Representative election. Well, on second thought it
could be that any sane Amiga user who knows you, wouldn't vote for you,
so you have to ask for votes from folks who don't know you and don't
have any connection with the Amiga.

I also don't find it appropriate to campaign for your election and
direct non-Amiga users to the election web-site, without telling them
that it is about an Amiga User Rep election. Your masquerading of 'end
users tired of....' is misleading to potential voters.

Daniel

Oh deary, deary me!

There's me on a STE surfing he net on CAB without any problems;
striaght forward and a hell of a lot quicker than Internet Explorer.
Alright you don't get colours on a hi-res monitor, but it's
functional.

I don't have to wait to get my STE running and it's more reliable than
a PC and cheaper.

Oh! I forgot to mention, I too have a PC so I think that allows me to
compare.

Bye the way, post and newsgroup are 100% better than the PC with all
it's fancy and expensive processors and programs:))))

Cheers! for now

What folks, what "great" difficulties? Please post specific examples. I'm using CAB v2.5 and its virtually a "no-brainer" (ring a bell, Sinclair?)

Only a Slack...er Mac user would consider a 1 button installation to be "difficult"! ;-)

DarkChyld.

Far to many premature judgement being made!!!!

Daniel, you mis-understand what my intentions are. Perhaps this is due to my being one of the candidates. Let me try and clairify.

>appropriate newsgroup (follow-up set to comp.sys.amiga.misc).

Is it about just the Amiga? NO! It's about the coming changes needed in the computer industry. Changes that are going to happen because there is no longer a choice.

I'm an end user who is very fed-up with this game the industry has been playing with itself. A game where the end user is just and only a spectator. A game where those who benefit are those playing the game and at the expense of many end users.

I'm tired of software compatability and hardware failure problems. There is a better way to deal with these issues and it's going to happen.

What these changes mean is, no longer is there anything valid about end users being biased for or against this or that platform or OS. Fact is, it is this user basis that benefits the game players while giving in return the problems of incompatability and hardware failures to those

biased. Doesn't sound very fair to me as an end user.

The biggest mistake many users are making is getting trapped in this game and therefor being wrongly judgemental of other users, when in fact the judgement should be properly placed on the industry for creating the mess they have. A mess that the end users are going to pay for!!!

Doesn't sound very fair to me!!!

>I don't see any reason why you are asking for votes from Non-Amiga-users
>in an Amiga User Representative election. Well, on second thought it
>could be that any sane Amiga user who knows you, wouldn't vote for you,
>so you have to ask for votes from folks who don't know you and don't
>have any connection with the Amiga.

Yes, there are Amiga user who are also wrongly biased, and many of these who are biased also don't realize what is coming in the way of solutions. If they did, they wouldn't be so damn quick to apply the premature judgements that they and many users on all platforms do.

Your speculation about why I've gone into other newsgroups is in fact such a premature judgement. Apparently you to fail to realize what is coming and why.

It's not about being platform biased, which is only bringing us end users the problems I have mentioned, problems many users are very tired of.

What if: Amiga Inc. was to come out with a product that would allow all end users to connect it to their system (platform independant) and thru such a product are able to remove compatability problems? What if, with the same product the end user is able to remove many other problems as well? I.E. upgrade fears, hardware failures like a harddrive taking down a whole system for a week when if fact for the user to have the ability to easily remove and/or replace the bad part and get right back up and running. And the list goes on with software as well.

It's about Versatility and Compatability. Not about "my OS is better than yours" when in fact it's not the users OS (except for linux) at all but some company who loves to hear such battles going on, while they dump problems on the users.

Hey, there are some great application on all platforms, should I as an end user have to go out and buy one of each system just so I can use the best application tools available? NO! However, I should be able to buy just the parts I don't already have and be able to easily add them to my system.

User Oriented Modular systems, in both hardware and software. This is what is comming!!! And it applies to all systems, not just the Amiga. But it has to start being done somewhere and it just so happen that it is beginning with the Amiga. Why? Because of the state the Amiga is in due to what it has been thru. A state that is very open (unlike the platform biased current) to all users on all platforms. Open for input from all users regardless of their current platform.

It's not about being platform biased, but about removing this pointless and non-productive bias so that such changes can come along that really benefit "END-USERS!!!" rather than those who promote consumer entrapment abuse.

>I also don't find it appropriate to campaign for your election and
>direct non-Amiga users to the election web-site, without telling them
>that it is about an Amiga User Rep election. Your masquerading of 'end
>users tired of....' is misleading to potential voters.

Perhaps this was an error on my part. But only in not better explaining that this election, although having the name Amiga attached to it, is about comming changes and needs the input of as many computer users as possible.

It's about the future of personal computing!

The way we currently preceive computer platforms today is not how we will preceive them tomarrow. Tomarrow such labels as Amiga, Macintosh, BE, Atari, Acorn, etc.. will be more like brand names of harddrives. You can use them together!!!

>Daniel
>--
>"I think it is very important, that we explore an open Amiga platform,
>use industry standard components to reduce the production costs,
>to make it faster to develop and easier to upgrade."
>- Petro Tyschtschenko, Nov. 1, 1997, Midwest Amiga Exposition

Nice Quote from Petro!

To better understand what is comming, to better prepare for it, it won't hurt anyone to simply look into what is evolving in the Amiga community.

This election, well let's just say there is a great deal in the way of web links to information one can access thru it. The links of ICOA information, JMS information, Information available thru candidates pages.

BUT ONLY IF YOU WANT TO KNOW WHAT'S COMMING FOR EVERYONE!

1703. Help! Linking a CD-ROM to my STE:(

Newsgroup: comp.sys.atari.advocacy
Date: 1998-03-31 00:00:00 UTC
From: steve@steverosie.demon.co.uk
Message-ID: <891384569.6321.0.nnrp-01.c1ed1184@news.demon.co.uk>
Source record: 5363
Cross-posted to: comp.sys.atari.advocacy,comp.sys.atari.st,comp.sys.atari.st.tech

I am having a problem gettings an external SCSI CD-ROM drive (Apple 300E) running on my STE.

My setup is as follows:
4 meg STE running under TOS 1.62 & 2.06 (not at the same time:))
System solutions MiniS Hard drive.
Using the adapter that was supplied with it in 1994, SS say it's an ICD.

HDdriver v3.10 will not allow any drive to initialise, let alone run. The hard drive locks up, no matter what you do.

I have downloaded the HDdriver v71.0 demo with mixed success; in 1.62 & 2.06 if the hard drive doesn't hangup on me (yellow light stuck on), it acknowledges the CD-ROM drives existance, but only allows me to acces partitions C-H instead of C-J on my hard drive. Using MetaDOS v2.70 under 1.62 the computer bombs out when the CD-ROM is opened; in 2.06 I can actually view the directory:) But when any attempt to run any install program etc... the computer crashes.

As I have met with limited success with the demo version of HDdriver 7.10, and as System Solution has failed to convince me that upgrading to the full version would get me sorted I don't want to splash out money on a wild goose chase based on a salesman selling his trade.

Has anyone been through the same problems, if so how was it overcome? I don't mind buying software, on condition that it does what I want it to.

If any dristibutor, producer or writer of these commercial or any driver package could be so kind as to forward me a copy of their software and it does the job I want (which is to get this CD-ROM drive so that I can use it) I can't see a problem with me buying it. simple enough.

Any help will be greatly appreciated, and I mean that, I really do, I'm not kidding, It'll make my day, or millenium, I'll be forever in your debt, I'll definitely owe you a favour, and I mean that most sincerely folks..... :))))))

Thanks

Cheers! for now
Steve

I don't think the full version will change anything. But as you're
experiencing some unique problems it's quite likely that there is some
kind of hardware problem.
Note that HDDRIVER will only offer partitions that have correct
parameters and that these parameters must be compatible with your
version of GEMDOS. A partition larger than 256 MByte won't be available
on old versions of TOS, for example, because TOS 1.0 doesn't support
partitions of this size. See the online help in the partitioning dialog
box of HDDRUTIL for more information about partition sizes.

Hi Steve!

I haven't actually used a CD with my Atari, but I know there are several other drivers to try out.
(From what I've heard MetaDOS really suck...)

Try Spin! or ExtenDOS. I think ExtenDOS is free, but I don't know about Spin!.

Good luck!

I just found this on Hasbro's web site...

Food for thought, isn't it?

Nick

---<FILE ATTACHMENT>----------

HASBRO INTERACTIVE SUES MICROSOFT FOR ILLEGAL USE OF
FORCE FEEDBACK PRO TECHNOLOGY.

BEVERLY, Mass., April 1, 1998 - Hasbro Interactive,
Inc. today announced that it has filed a lawsuit in
U.S. District Court against Microsoft Corporation for
illegal use of a technology patented in 1978 by Atari
Corporation and recently acquired by Hasbro
Interactive.

The technology developed by Atari, called Super-
Buzz(tm), was never commercially implemented at the
time, but implemented action feedback from game systems
to the player, by a patented vibro-buzzer hidden in the
joysticks base. This buzzer could be set off by the VCS
games console.

Hasbro Interactive is seeking an injunction to prevent
Microsoft from improperly using the Super-Buzz(tm)
technology. Hasbro Interactive is also seeking to
prevent Microsoft from misleading Force Feedback
developers and to prevent them from delivering anything
but fully Atari compatible Super-Buzz(tm) technology
implementations.

Specifically, the complaint charges Microsoft with
patent infringement, false advertising, breach of
contract, interference with prospective economic
advantage and unfair competition.

"Hasbro Interactive's first responsibility as stewards
of the Super-Buzz(tm) technology is to preserve the
significant investments that Atari Corporation, and
therefore Hasbro Interactive, have made. We are
required to take this action on behalf of the entire
joystick industry, the Atari heritage and Hasbro
Interactive's shareholders," said John Bersaetz,
president of Hasbro Interactive's lawsuits division.

Bersaetz added that for the past two weeks and up until 6 p.m. Sunday, March 29, Hasbro Interactive worked diligently with Microsoft in hopes of convincing them to abide by their agreements.

According to the complaint, "Rather than comply with its contractual obligations, defendant Microsoft has instead embarked on a deliberate course of conduct in an attempt to fragment the standardized application programming environment established by the Super-Buzz(tm) technology, to implement the Force Feedback technology in a manner calculated to cause software developers to create programs that will operate only on platforms that use defendant Microsoft's Win32-based operating systems and no other systems platform or games."

"We examined all of our alternatives and felt that we had no choice but to pursue litigation," said Peter Borris, Vice President and General Counsel, Hasbro Interactive, Inc.

The suit was filed today, April 1, 1998 at United States District Court, Northern District of Massachussets, Beverly Division.

The complaint specifies that Hasbro Interactive is seeking "preliminary and permanent injunction enjoining Microsoft. . .from using the Force Feedback Pro technology; from doing directly or indirectly any acts or making any statements that are likely to cause confusion, mistakes or deception in the marketplace as to the compatibility of their joysticks with Hasbro Interactive's Super-Buzz(tm) technology . . . from doing directly or indirectly any acts that are likely to diminish the value of the Super-Buzz(tm) logo. . ."

Hasbro Interactive noted that users will soon be able to access applications written for the Force Feedback Pro joystick by using the new Super-Buzz98(tm) joystick, soon to be released by Hasbro Interactive. In addition. Using this product, Hasbro Interactive deliver high-performance, fully-compliant Super-Buzz(tm) feedback for the PC Compatible game industry.

Hasbro Interactive, Inc. is a leading all-family interactive games publisher, formed in 1995 to bring to life on the computer the deep library of toy and board games of parent company, Hasbro, Inc. (AMEX:HAS). Hasbro Interactive has expanded its charter to include original and licensed games for the PC, the PlayStation(tm) game console and for multi-player gaming over the Internet. Headquartered in Beverly,

Massachusetts, Hasbro Interactive has offices in the
U.K., France, Germany, Japan and Canada. For more
information on Hasbro Interactive titles, please visit
www.hasbro.com

Atari, The Fuji Logo, Atari Golden Oldies, Pong98,
Centipede98, MissileCommand99 and Super-Buzz are

I'm afraid that I know very little about HDdriver, but I suspect that it is
not your problem.

You must consider termination with multiple drives. Is your first drive
terminated (resistor packs or switches?) Is your last drive terminated (I
recommend a pass-through terminator -- costs about $10). Are all other drives
NOT terminated?

You must consider cables. Are you using good condition (preferably short)
cables? A cable that has been mistreated (twisted, etc.) may look fine, but
often will not work. I treat my cables like china, having gone through "bad
cable hell".

If neither of these are your trouble, I'd recommend changing software.
Extendos Pro works beautifully for me, and I happen to know it supports the
Apple 300 (though I've never actually tried that drive myself).

This may sound daft, but couldn't it be true? There were rumours a
couple of months ago that a similar suit had prevented the launch of the
analogue joypad with shock feedback for the Playstation in the UK. The
dual shock version is due soon, but isn't it at all possible, given
Microsoft's feedback joystick?

> box of salt. CAB is working fine on my end, and I know a lot of
> Atarians who are getting excellent results.

> And many others whom are not...

how many are "many", TIFKAS? Who are they? Names, places, dates,
nature of the problem? How many have had the problem solved?

Remember too that you have never used CAB (as well as other
programs like Calamus and the other aspects of the Internet suite),
therefore your thoughts on how well these programs work are useless. I
however, have worked with Navigator, Internet Explorer AND CAB (have to
when designing web pages for optimum performance), so I should know
what I'm talking about.

> >Peter S.
> >-Happily using Navigator 4!
>
> hey, TIFKAS, why not pester the PC people for a change with your
> advocacy? Or have you run out of Airedales to kick?

> Pester? Just the facts mam and I have..

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!

TIFKAS, that's probably the STUPIDEST thing you've posted yet,
especially in light that your reputation as a troll, a net abuser, and
a complete ignoramous is well known. What you post is OPINIONS, not
FACT - and in the immortal words of Dave Barry, "everybody has an
opinion, and yours is wrong". It ranks up there with "I am a realist"
(which compares with other statements like "I am not a crook", "I am
not a bimbo", and "I'm an enviromentalist" for sheer stupidity and
untruth) as one of your most dubiuos statements.

The TRUTH of the matter is that you have a pathology of attacking
Atari users in their newsgroups with UNTRUTHS because of a belief that
we are attacking your chosen platform, the Macintosh (a platform which
needs no defending) with any means necessary, including MCIBTYC drivel,

referring to TOS users as "The Atari Jihad", and harassing e-mail campaigns. You are notably absent from comp.sys.mac and comp.sys.mac.advocacy (which gives a truer idea on what's REALLY going on in the Mac world), as well as the PC newsgroups - could it be that the result of doing so would be the equivalent of throwing you to starving lions? :)

Let's face it, Joe Isuzu (1) is a better purveyour of fact than you, not to mention Rush Limbaugh (2). If I were your employer and found out you were using the Internet to post out and out untruths about the competition you would be swiftly fired!

> newsreaders that you can't use them?

>I just prefer deja for now. When I have time off from my Apple duties(not
>gonna happen for now) than I will look at newswatcher...

not good enough, TIFKAS - how long does it take to set up a newsreader progam on a Mac? It took me just MINUTES to set up NEWsie on the Falcon and getting good results on the first try.

And guess what - I just bought a Mac, which I'm going to set up to access my net account as well as a backup system (to help my mother find shareware and PD for her own SE/30 and business), and you'll be sure that I'll be setting up a newsreader for it - and it'll only take me a couple of minutes to do so.

You've bragged so much and so long about the superiority of Cyberdog and Navigator and Internet Explorer and you still use DejaNews to post? How about putting some substance behind the wind eminating from your hindquarters?

For those in Britain and Europe:

1) JOE ISUZU: an oily car salesman portrayed by David Leisure in a series of US commercials for Isuzu automobies in the early 1980s; his tactic was to make up outrageous whoppers about Isuzus ("They can climb Mount Everest! They only cost $29.95!") while the words "he's lying" were flashed onscreen, with the company revealing the truth about the product.

2) RUSH LIMBAUGH: infamous darling of the US political right whose obsession is to discredit the Democratic Party and especially President Clinton , who purveys his particular form of venom on talk radio stations (examples - refers to feminists as "feminazis", calling Chelsea Clinton an "ugly dog", told a black phone-in caller to "take the bone

out of your nose"). Was recently outed by FAIR as seriously fudging his data as well as behaviour contrary to his beliefs (discovered that he was divorced three times and lived with girlfriends while preaching conservative family values; had his father use his influence to get him a deferment from serving in Vietnam); also had his TV show canceled last year due to poor ratings; liberal comedian Al Franken also had a #1 book with his scathingly critical (and funny!) look at the Right with his book RUSH LIMBAUGH IS A BIG FAT IDIOT .

If you read the post you will find a lot of clues that this is a April
fool, and why do they just sue Microsoft and not all the other
producers of force feedback joysticks, like Gravis and Thrustmaster.

I had realised that it was a fool, but was just wanting to point out
that given similar situations around the world DO exist, there could
have been some substance behind it.

All I stated is that some/many Cab folks were having difficulties in using it
from posts in comp.sys.atari.st. This is a fact. I have no idea in what you
are talking about above.

See what one fact can do? Make you defensive and paranoid.

Latest and greatest what? What you called Navagtor I thought was
called Communicator now. Don't you even know what your using?

> And what..
>
> Some people also use the fucking navigator or explorer software monsters..
> What do that software more as to surf at the web?

>Eh? I don't understand Canadian slang..

Don't know your nationalitys either.

> Open your eys, blindfish..
> (Buy a bablefishm if you can't unterstand something..)

>Understand what? That many Atarians are having difficulties with Cab..

By your terms, there are not that many Atari users in existance. So
how can "many" have problems? What you are wasting your time with is
looking at the article overview and making a judgement that if many
post say "problems with CAB" then the fact that many are having
difficulty with the application must be true. Of course, you haven't
taken the time to persue the article further, but just use the title
to try and get some attention.

There once was a boy named Peter,
Who grined when he thought his dick was bigger
He rushed to his keyboard to tell the world
and hoped it would make him more manley for all the girl
While in his glory, what slipped his mind
That unlike others, it grew out his behind

Your friend,
Mike

]-Look in comp.sys.atari.st to your hearts content.

I did, its a great place to be! As to CAB problems, there were very few postings, and most of them concerning problems with CAB had been dealt with quickly and efficiently. The ratio of CAB users to CAB users with problems is so low as to be insignificant. Find something else to rant about...

]-I never stated I ever used Cab. I just stated that some Cab folks in
]-comp.sys.atari.st were having difficulties. I stated as a fact.

Some users in the Mac newsgroups are having difficulties, please report this immediately! This is a fact, as well... ;-)

]-Whatever..

Here is your typical Sinclair response... (well thought out, and original hmm?) ;-)

]-All I stated is that some/many Cab folks were having difficulties in using it
]-from posts in comp.sys.atari.st. This is a fact. I have no idea in what you
]-are talking about above.

Of course not, and you never will...

]-See what one fact can do? Make you defensive and paranoid.

I'm sure your deodorant feels the same way... ;-)

]-I never bragged about Cyberdog.

Oh, this is rich! I'm pretty sure I remember a -huge- text file about CyberHog being posted here by you!!! ;-)

]-I don't know why those two folks have to do with me.

(concerning Rush Limbaugh and Joe Isuzu)

Try looking in a mirror...! ;')

Just out of curiosity, Sinclair...if I go to comp.sys.mac.advocacy and ask for character references on you (dedicated Mac advocate that you are), what kind of response(s) do you think I'll get? <big grin>

I have a selection of Atari ST titles for sale.

This List Updated 20/3/1998.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...
Atari CD ROMS, 16-bit sampler cartridge/hardware etc...

All are on original media.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^^

Prices DO NOT include postage.

GAME COMPILATIONS

Hollywood Collection (5d,ni) 5
Ghostbuster II, Indiana Jones and the Last Crusade & Robocop
TNT (4d) 5
Xybots, Toobin, APB, Dragon Spirit and Hard Drivin'
Finale (4d) 5
Paperboy, Overlander, Ghost'sn' Goblins
and Space Harrier (20 levels)
The Dream Team (5d, ds) 5
The Simpsons - Bart v' The Space Mutants, WWF Wrestlemania and
Terminator II 'Judgement Day'
Atari 520STE Discovery Xtra Pack 5
Language Disk DE1 (ds)
Final Fight Disks DE2 & DE3 (ds)
Sim City/Escape from the Planet of the Robot Monsters (ds)
9 Lives (ds)

SPORT TYPE GAMES

World Championship Soccer (1d,ds,nb) 2
Ballistix (1d,ss) 2
Superleague Soccer (1d,ss) 2
T.V Sports Football (1d,ss,nb) 3
Vector Championship Run (1d,ss) 2
Championship Wrestling (1d,ss) 3
Top Shot = Kick Off + Extra Time. (1d,ds) 3

SIMULATIONS

ATFII (Atdvanced Tactical Fighter II) (1d,ss) 2
Lombard RAC Rally (2d,ss,nb) 2
Falcon - The Mission Disks Vol.1 (needs Falcon) (1d,ss) 3
Their Finest Hour -The Battle of Britian (2d,ds) 5
Carrier Command (1d,ds) 5
Mig-29 Fulcrum (1d,ds,meg) 5
F-15 Strike Eagle II (2d,ds) 10
Railroad Tycoon (2d,ds,meg) 10

STRATEGY, MIND AND ADVENTURE

Alpha Waves (1d,ss) 2
Go-Moku/Renju (1d,ss) 2
Federation of Free Traders [F.O.F.T] (2d,ss,nb) 2
Conflict Europe (1d,ss,nb) 2
Crash Garrett (2d,ss) 2
Archipelagos (1d,ss) 2
Tower of Babel (1d,ss) 2
The Quest for the Time-Bird (3d,ds) 2
Quizam! (2d,ss) 2
Lords of Chaos (1d,ds) 3
Driller (1d,ss) 3
Populous (1d,ss) 3
Borodino (2d,ss) 3
'Nam 1965-1975 (1d,ds,nb) 3
Pirates (2d,ss,nb) 3
The Kristal (2d,ss,nb) 3
First Contact (2d,ds,nb) 3
Airborne Ranger (2d,ss,nb) 3
Murder (1d,ds) 3
Knightmare (2d,ds) 3
Lemmings (1d,ds) 3
Corporation (2d,ss) 3
Mega-Lo-Mania (2d,ds) 3
Elite (1d,ss) 5
Terrorpods (2d,ss) 5
Loom (3d,ds,nb) 5
Jinxter (1d,ss) 5
The Secret of Monkey Island (4d,ds,meg) 5
Ishar 2 (3d,ds) 5
Populous II (1d,ds, meg & 512k versions) 10
Lemmings 2 - The Tribes (1d,ds,meg) 10

Elite 2 - Frontier (2d,ds,meg) 10

ARCADE

Skweek (1d,ds) 2
Defenders of the Earth (2d,ss) 2
Eliminator (1d,ss) 2
Wrangler (1d,ss) 2
Hard Drivin' (1d,ss) 2
Yogi Bear & Friends In the Greed Monster (1d,ss) 2
Blazing Thunder (1d,ss) 2
Mig 29 Soviet Fighter (1d,ss) 2
Fast Food (featuring Dizzy) (1d,ss) 2
Whirligig (1d,ss) 2
Hellraider (1d,ds) 2
Outrun (1d,ss,ni) 2
Bad Company (1d,ds) 2
Rambo III (1d,ss) 2
Mean Machine (1d,ds) 2
The Light Corridor (1d,ss) 2
Last Ninja 2 (1d,ss,nb) 2
Voyager (1d,ss,nb,NSTE) 2
Ghostbusters II (4d,ss,nb,ni) 2
Hellraisers (2d,ss,nb,ni,NSTE) 2
Legend of the Lost (2d,ss,nb,ni) 2
The Last Shoot-'em Up (1d,ss) 2
Time Bandit (1d,ss) 2
Robocop (2d,ss,ni) 2
Popeye 2 (1d,ds) 2
Flood (1d,ds) 2
Hong kong Phooey (1d,ss) 2
Steg the Slug (1d,ds) 2
Panza Kick Boxing (2d,ds) 2
Cloud Kingdoms (1d,ss) 2
Cabal (1d,ss) 2
Moonwalker (2d,ss) 2
Shadow of the Beast (2d,ds,ni) 3
The New Zealand Story (1d,ds) 3
Midnight Resistance (1d,ss) 3
Prince of Persia (1d,ds) 3
Hudson Hawk (1d,ds) 3
Golden Axe (2d,ds) 3
Cloud Kingdoms (1d,ss) 3
Cap'n Carnage (1d,ss) 3
Impossamole (1d,ds) 3
Risky Woods (1d,ds) 3
ST Star Raiders (1d,ss) 3
Oxxonian (3d,ss) 3
Barbarian (Psygnosis) (2d,ss) 3
Barbarian (Palace) (1d,ss) 3
Cybernoid II - The Revenge (1d,ss) 3

Targhan (1d,ds) 3
Switchblade 2 (1d,ss) ..... <>Reserved<>. 3
Defender II (1d,ds) 3
Double Dragon III (2d,ds) 3
Robocop 2 (1d,ds) 3
Mr Do Run Run (1d,ds) 3
Dragon Breed (2d,ds) 3
Operation Wolf (3d,ss,nb) 3
The Untouchables (3d,ss) 3
Infestation (1d,ds,nb) 3
Scrambles Spirits (2d,ds,nb) 3
Thunderblade (2d,ss) 3
Total Recall (2d,ds) 3
Streetfighter II (4d,ds,meg) 5
Obsession (2d,ds, meg, STE) 5
Dyna Blaster [with multiplay adapter - s/bombman clone] (1d,ds,meg) 10

SERIOUS STUFF

STOS Compiler (1d,ss) 3
STOS 3D (2d,ds) 5
STOS BASIC - The Game Creator (3d,ss) 5
Family Roots (1d,ss) 5
HiSoft 'C' Interpreter (2d,ss) 10

BOOKS

Atari Discovery Pack Manual 2 - STOS The Game Creator Manual 3
Atari Discovery Pack Manual 3 - Neochrome/FirST Basic etc 3

HARDWARE

Multiface ST 'Ripper Cartridge' (NSTE) 20
520 STFM Motherboard 25
Atari ST Terminal Emulator Cartridge ..... open to offers

1732. Atari users intolerable to others?

Newsgroup: comp.sys.atari.advocacy
Date: 1998-04-05 00:00:00 UTC
From: sinclair2000@earthlink.net
Message-ID: <6g8kh9$2h7$1@nnrp1.dejanews.com>

Here a former Atari ST user asks if Atari is still in business and is
imediately jumped on and insulted. I could understand Amiga/Wintel and
certain extent Mac users behaving like this, but current Atari users, no way!

This platform has never survived on idealism. The price mentioned comes
out to around US$450 -- a good deal for what one would get. And there
are new 'Atari machines', as you called them.

It sounds like you're the type of person who would have "WordPad for
Dummies" on the bookshelf.

I didn't find the response in bad taste, especially considering it was
troll bait.

Why didn't you have a reply to my little "Peter" poem?
I thought it rather cute.
I think it's time to search the net,
and spread the spam the Peter has begat.
Look for his wisdom, hi and low.
When these guys get done with him,
then EVERYONE will know....

Your friend, Mike

He wasn't flamed for that part. Since you bothered to quote
the whole thing, you might have bothered to actually read it.

<snip>

As per your usual form, you picked -1- single message out and made an example out of it. You failed to mention that several other Atari users responded with helpful messages, including the URL to a Web site where there was info on new Atari clones... Tsk, tsk, tsk, Sinclair! Such negativity will give you acid indigestion! ;-)

Are you a professional recording engineer or do you like to dabble with recording? Do you use the Cubase package for the Atari ST, or have ever wondered about what is considered one of the best sequencers for MIDI instruments on the market today? Then have we got a meeting for YOU!

On Wednsday, April 15th, the Toronto Atari Federation will be putting on a very special presentation with Ray Williams of Steinberg Canada and Club Cubase! Featured at this meeting will be a demonstration of Cubase Audio 16, the 16-track hard disk recording/sequencer package for the Atari and C-LAB Falcons that puts together a comprehensive recording studio solution in your own home. Ray will also be giving tips and tricks that will help users of Cubase get the most out of their sequencing and arranging, and should also have product for sale as well.

We're honoured that Ray has volunteered his time for this presentation, and we know that this will be a VERY informative meeting for all MIDI and recording enthusiasts. This meeting is definitely not to be missed!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

> 300E) running on my STE.

I know that Sun Stations are tricky on what sector size a SCSI cd rom
have. This can be altered via various settings on some CD-ROM drives.
Could this be the reason for your problems too? A Apple CD-ROM have to be
modifyed to be used on a Sun AFAIK, dunno if it applies to an ST as well.

Regards.

You could argue that 6 out of 10 Cab users that are having trouble is many.
Many is not a defined numerical term.

1743. Old Atari & Games for Sale -- Ottawa

Newsgroup: comp.sys.atari.advocacy
Date: 1998-04-10 00:00:00 UTC
From: bw803@FreeNet.Carleton.CA
Message-ID: <6gjrp5$t16@freenet-news.carleton.ca>
Source record: 5503

We live in the Ottawa area and have an Atari 400 computer which is
up for sale. Below is a list of equipment and programs. If possible, we
would like to sell all this as a package, so as not to be stuck with any
leftover things which we couldn't use. All items sold as is.
Reply by email with an offer if you're interested.

Hardware:
Atari 400 home computer with cables
Cassette program player
2 joysticks

Cartridges:
Pac-Man (game)
Centipede (game)
Qix (game)
3-D Tic-Tac-Toe (game)
Miner 2049er (game)
Basic (programming language)
Pilot (programming language)

Cassettes include:
(these we bought)
Zeppelin (game -- good one!)
Fort Apocalypse (game -- good one!)
Outlaw/Howitzer (2 games)
Eastern Front 1941 (game)
Clowns and Balloons (game)
Touch Typing (typing program)

(these came as the 80's equivalent of "shareware")
Goldrush (game)
Ski (game)
Chicken (game)
MasterMaze (game)
SpeedDemon (game)

plus some miscellaneous cassettes.

Manuals (thrown in for free) include:
Owner's Manual
Your Atari Computer
Atari Basic
Atari Sound and Graphics
Kids and the Atari

Actually, it loads pages much faster than Communicator does on my PM.
Of course it is only a 604 180Mhz, and dosen't hold a chance against
my Afterburner/ NOVA combo.
If anyone here has time on their hands (among other things), it is you
my dear Sinplop. You don't bother me, I just can't see for the life of
me why someone like you exist.
At any rate, you will be red faced shortly.

At least with CDTOOL or SPIN! this is no problem. One of my CD-ROM
drives is set to 512 bytes per sector. That is what the Sun needs and it
also works with my Atari. My other CD-ROM drive has the normal (i. e.
2048 bytes per sector) settings and this also works.

1746. TIFKAS Welcome at April 15th TAF Meeting!

Newsgroup: comp.sys.atari.advocacy
Date: 1998-04-10 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <352e3d08.0@diana.idirect.com>
Source record: 5506

It appears that from one of his recent missives that TIFKAS (The Idiot Forever Known As Sinclap) has expressed interest in attending one of TAF's Toronto meetings, particularly our Club Cubase/Cubase Audio Falcon clinic meeting this coming Wedsnday.

Well, let me go forward and say that we would be more than welcome to have him up! In fact, he won't have to scrape together 200 pennies (although we would love 200 American pennies, as they're currently worth more than our Canadian ones) as I will personally pay his entrance fee. I will even introduce him to the membership! We've all wondered what an Internet "troll" looks like, and we couldn't imagine a more perfect specimen!

Too bad we won't have any Apple product (a fine computer, BTW) at this meeting, as it is meant for Atari users and enthusiasts. Club Cubase WILL have a meeting up on April 27th at the Trebas Recording Institute in Toronto so he can meet with other Canadian Mac enthusiasts who are all much smarter, better informed, and more tolerant of other user platforms than he is. He can even visit our Macintosh stores and get a firsthand look on how professional Mac salesmen sell their product with courtesy and factually without having to troll Atari newsgroups.

TIFKAS will also be pleased to know that no member of TAF will be allowed to shoot him, as we do have much stricter gun control laws up here. However, we WILL be running a concession stand consisting of rotten fruits and vegetables suitable for hurling (all proceeds to go to the TAF fund for setting up ACE '99!). We will also be hurling some of the more embarrassing questions that he has continued to dodge on the Atari newsgroups to date, only this time he won't have a computer screen to hide behind!

We will let him touch and try out programs on our hallowed Falcon 030 (after he has towelled off, of course) so he will have a SECOND try of a computer that he has proclaimed himself an expert at - we will even let him try the latest version of Calamus, a program he has NEVER TRIED but has denigrated as "crap" and "no good". If he should want to come to a future meeting, we will gladly have a DirecT60 (another computer he has NEVER used but considers himself an "expert" on) on hand so he can see first hand what a speed demon this piece of TOS hardware really is!

We will even set him up with his own ST system provided by Goodwill Industries, complete with an Internet Setup pack consisting of STiNG, CAB 1.5 and the other Internet clients, with detailed instructions on how to set up NEWSie in minutes so he won't have to rely on DejaNews anymore for posting!

Accomodation? You bet! We'll reserve a special place for him to
sleep afterwards: a park bench near the Jane-Finch Corridor.

Of course, this is all dependant on whether TIFKAS will be allowed
to cross Canada's border (the world's largest undefended border), as
callow jingoistic morons like him may be considered "undesirable" under
our toughened Immigration Act. Those silly armed border guards - they
don't know we're the 51st state! They'll have to profusely apologize to
TIFKAS after the strip search and the procedure with the rubber glove
before they turn his Nissan Altima back......

THE COMPUTER DUNGEON is proud to add more full version Shareware games
to our growing inventory.

Latest edition is "Annex" from D. Pritchard.

In this first person action game, you take on the role as commander of the
National Space Command and its your job to stop the hostile forces who have
taken over Science Station Annex on Talro Beta.

Explore the vast complex but time isn't on your side as the hostiles have
opened
the reactor cores and radiation is filling the complex.

Annex comes ready to play with printed instructions.

For more information on Annex and other full version Shareware titles (such as
Realms of Reality, Running, Mole Mayhem, Double Bobble 2000, and more)
please visit our website at: http://www.mcs.net/~isis/dungeon/dungeon.htm

We also have many new and used ST/Falcon software titles in stock, new and
used accessories & hardware, Atari video game cartridges-systems-accessories,
and much more.

Thank You for taking the time to read this and we look forward to helping you
with all your Atari needs.

OK, guys, here is my little contribution to the subject:

I've own Ataris for mor than 10 years, it is IMHO one of the best designed computer systems of all times, but, as time goes by so computers, i don't own PC's, but i work with them all day long, the main reason i don't wanna buy a PC is the tech groundbreak, i've been thinking buying one just because i want APE for my Atari, anyhow, i don't think Hasbro or anyone will take the A8 out of the basquet, the many out there who own one of the newer game consoles know exactly why, in the meantime we are seeing a resurrection of old 8-bit tiltes, the last one, i think, is robotron for the N64.... So, games we will see lots of resurrections, systems, i don't think we'll see any.... Still, i buy any piece of A8 hardware that crosses my path.

Javier.

If you decide to 'go PC', I suggest trying Linux or
FreeBSD first. They, as unixen, tend to be a bit
harsher on newcomers but, they're much more reliable
than WinXX and perform better (more responsive) on
similar hardware. You will likely be quite shocked
with how much computing horsepower it takes to just
do basic computing with WinXX.

I am after someone whom is willing to swap a Falcon 030 or 040 with the basics so that it can be used. I've got two 4 meg STE's I may have some other bits I could throw in with them.

I think this is called desperation; a hard disk & CD-ROM drive getting the better of me.

That's great. No one here wants to see Apple go out of business. We
just want to see them get more stringent distribution standards - and
to make those standards retroactive.

>
>Beleagured, going out of business Apple Computer is expecting continued

Yes, they'll probably see a good rise after the get rid of all the
twerps that are turning people off on Apple for no other reason than
the fact that they detest certain people that support Apple.

I need an 850 Interface Module to transfer files from Atari 800XL to Mac.
Or perhaps there are other ways of transferring the data from the disks (I
have access to dual floppy drive PCs at work) to my Mac.

Thanks,
Faith Weeks

I am running Windows 95 on a 486DX-66 and it runs decently. Seems almost as responsive as my Macintosh at work (7200/75). I run Microsoft Office products and have never had a complaint about performance.

I would like to try Linux but it does seem intimidating. Also, where does one get software for it (like word processing, graphic)? This is an honest question.

There's a free (not for profit) office suite called Star Office
available for Linux. I've got it, I use it very occasionally. I end up
using Word 97 more often because I don't get the same quality print in
Linux that I do in Windows. I'm using a Canon BJ-200ex. Printing in
Linux is primarily done with postscript, so if you have a postscript
printer you should have no problem. I, on the other hand, don't so I
have to use a postscript filter (apsfilter) to make it work with my
printer...and then I have to use a BJ-200e driver (which is half the
resolution).

StarOffice is not bad. It supports conversion of various format
documents (albeit, not Word 97, but will do Word 6.0). It has everything
you'd expect in a word processor. I especially like having the
mathematical formula editor...which comes with the package.

The major linux vendors distribute it (like Redhat or Caldera)
and you can find it in places like *linuxmall*. For games that
have been 'un'released, you can just pick up the game at CompUsa
and download the Linux version of the executable (QII, UO).

There's also a 'freeware' ST emulator called STonX that
you might want to try out. You'll have to provide ROM
images however (not hard to find on the web).

Linux will likely run more responsively on the hardware
you're using now. Although, unless you have lots of ram,
I would not expect much out of either '95 or linux.
Although Linux is a lot easier to trim and tune.

I never found the performance of M$ OSes to my liking.
I also found the registry and plug-n-pray quite annoying
as well.

Eagle will be nice and all. However, most Atari's
still floating around now are still limited to 4M
which for GEM is nice but for Unix even in curses
mode, it's a bit cramped. That's just the RAM,
mind you, and not even getting into storage...

Honestly, it runs along at a nice pace! Keep in mind, I;ve used high-end
Power Macs, Suns, Pentium IIs and while it can't compare to those systems,
it runs nicely. Especially for simple tasks like Microsoft Office. I do
have 28 megs of RAM but even under 16 it wasn't bad.

> The major linux vendors distribute it (like Redhat or Caldera)

I have seen Redhat at Electronics Boutique. The problem I might have with
Linux is that I only have a 500 meg hard drive.... Are these commercial
versions easy-to setup as, say, other major OSes? Like a nice setup
program?

>
> There's also a 'freeware' ST emulator called STonX that

I have heard good things about it. Does it allow different resolutions
other than the three standard ST ones?

>

If by trimming and tuning I have to wade through tons of configuration
files, I am not sure I want to. Are many packages for Linux "complete" or
do you have to compile most packages yourself? Sorry I am so clueless on
Unix.

>

The registry is fairly easy to configure, IMHO. Also, for some odd reason
(I know I am in the minority), Plug-n-Play has worked flawlessly for me.
Windows detected all of my components and I had no conflicts. Strange ;-)

Thanks for all the responses and help!

Run 'nicely' is not something I would describe of
any version of Windows. They're far too bloated
for too little actual functionality. Until I switched
to Linux, I was constantly contemplating an ST
emulator so that I could run more efficient (yet
useful) applications.

That fixation is gone. (although STonX is still
kinda nifty)

Yup. Hardware configuration is more Win 3.1ish. There is
some plug-n-pray but that's primarily with PCI devices.
Whether or not this is a good thing tends to correlate
to one's Win95 experiences (good or bad). For LInux,
500 may be a bit tight. I would expect it to be tight
for Win95 as well. If you dont have any intention of
using the linux dev tools are some of the more hardcore
unix utilities (like tex) you should be fine.

Yes, but it only runs in 256 color mode.

Yes, there is configuration overhead. Unix is a system
where you boss around the OS, instead of vice-versa.

>

Win95 did detect my 2nd CDROM drive, my tape drive & still
doesn't have a proper driver for it, didn't have a useful
monitor type for my monitor & misconfigured my ethernet
card disabling my modem in the process. Yes YMMV.

The registry is too prone to corruption & not a help to me
as I would be directly modifying it anyways to bend the
machine to suit me.

I haven't personally installed Redhat before, but I've heard it's a good
installation. 500 meg should be plenty (I used to use Slackware and
XFree86 on a 500 meg drive and I still had room to spare).
>

As an end-user I had to reconfigure the kernal to support my hardware,
and if I wanted to connect to the internet, I had to write my own script
to connect to my provider and start the pppd daemon. There are books
that explain this, but they aren't terribly clear. Also configuring
XFree86 (the Xwindows) can be a real pain in the butt. Other than that,
that was about it. :)

1776. For Sale Atari Falcon030

Newsgroup: comp.sys.atari.advocacy
Date: 1998-04-23 00:00:00 UTC
From: Leslie C Spencer <lspencer@globalnet.co.uk>
Message-ID: <6ho6hk$k50$1@heliodor.xara.net>
Source record: 5536

I have an Atari Falcon030 with a Quadram Multisync Monitor which is wired to give all the Falcon's Screen Resolutions. There is also lots of software. I hate to get rid of it but due to needing compatibility with PC's at work I have to let it go.
Any serious reasonable offer considered.

If you can't see why a 200K GUI might not win
in a war of graft then reason is wasted on you.
On the other hand, it's easy to see why a platform
with a long history of obscene margins might easily
trump a platform with 10x it's installed base in
a war of graft.

Those results correlate to the economics of the
various platforms quite well.

It's the same reason not all companies offer Mac support. Ignorance and
stupidity.
Add to that that TOS in itself is not such a great OS.

1785. TOS users beat TIFKAS in survey!

Newsgroup: comp.sys.atari.advocacy
Date: 1998-04-30 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <35486437.0@diana.idirect.com>
Source record: 5545

well, to be honest, it's not a formal poll, but it's just as reliable - the poll of public opinion.

Compare the posts of the majority of TOS users (many of whom are intelligent, helpful people) to that of TIFKAS (the Idiot Forever Known As Sinclap) (who deals in lies, obfuscution, and hateful language like comparing Atari users to murderous fanatics, as well as waging harassment campaigns via e-mail). Not to mention TIFKAS' using the victims of a terrible disease like Cystic Fibrosis to further his twisted paranoid agenda.

You can find the results of this poll at http://www.dejanews.com, using the keywords "sinclap", "tifkas", and "peter sinclair-day".

If you are also upset at being referred to as "The Atari Jihad", contact abuse@earthlink.net and postmaster@earthlink.net and be sure to send a copy of the post in question.

Hopefully TIFKAS will eventually a) find the courage to find a psychiatrist to help him realize his Macintosh is not his manhood, or b) be fired by Apple for conduct unbecoming of what is expected of their employees, with the boot to be personally administered by Steve Jobs (who TIFKAS once called an "arrogant bonehead" who would "destroy Apple if he ever got back in charge" - according to what I've heard, Jobs is not fond of bootlickers who will do anything to save their job).

Take care, TIFKAS - your employment at Apple is soon coming to an end......

What hateful language have I used? I never compared Atari users to murderous
fanatics. Having an Islamic faith is no way contrived as murderous fanatic
cult.. When did I use 'Cystic Fibrosis' in any twisted paranoid agenda?

> You can find the results of this poll at http://www.dejanews.com,

excuse me, but referring to us many times as a "Jihad" (read "holy
war") and in your own last post describing it as "Islamic" (which, BTW, tars
all Islamic faiths as violent, which is unfair and untrue) you have
proven more than ever that you are using hateful language to describe
Atari users. Are you once again in denial? Have you no shame? Have you
forgotten what happned to Roger W. Sheppard when he made his equally
stupid racist slur that got him in hot water with the New Zealand
government?

>When did I use 'Cystic Fibrosis' in any twisted paranoid agenda?

by using a support web site dedicated to fighting Cystic Fibrosis
to promote your own twisted agenda in claiming that Atari users are
idiots. As someone whose family carries the gene which triggers CF (and
having known people who've had double lung transplants in order to
stave off the ravages of the disease) I find your use of such highly
offensive.

>

>Whats the point?

shows you up as the idiot and clueless troll that you are, and
gives any readers an idea of how far you'll go to promote your paranoid
and self-serving agenda. I guess it's beyond you that my last post was
a parody of your last post?

>

ahh, so as well as being an idiot, a liar, and a misanthrope,
you're also a misogynist! Sure this is an advocacy group, but you're
going far over the line of good taste.

it is if it shows the reputation of the company you work for in a
bad light - and as referring to yourself as an "Apple Power Rep" in your
posts you certainly seem to represent yourself as a spokesman for Apple.
I think a few e-mails to your employer and to Steve Jobs, complete with
examples of your scribblings from the past and present, should have you
grovelling on the carpet in no time......

>
>> Take care, TIFKAS - your employment at Apple is soon coming to an

]-Let me tell you this much. I have been using an Atari made computer
]-since the early 80s... I now use a IBM comp. computer. You people REALLY
]-need to end this stupid shit already. ITS OVER.. LET IT DIE! I LOVE the
]-atari 8-bit/ST.. But its dead.. Its NEVER comming back.. Why are you
]-keeping this old and outdated shit alive. I understand that you might
]-have alot of feelings/goodtimes and emotions wrapped up in this, but
]-with all good things, they must come to an end!

A fast Atari Falcon/clone with TOS/Magic/Mint feels just as fast as
machines that have mucho higher mhz ratings. This is fact. My younger
brother has a 150mhz Pentium with a nice sound card. I asked him to
make a 16-bit, 25khz stereo .WAV straight from CD...Ooooh, what an
ugly request that turned out to be. My Falcon blows his big-bad-multi
media PC away for this simple job... ;-)

]-Mac - Atari - Commodore, etc.. SUCK when it comes up against my Pentium
]-I 333Mhz... It blows it out of the water! BYE BYE! If Atari (Hasbro)
]-came out with a new 32/64 bit computer system, I would buy it right
]-now.. But they have not done so.. Wanna know why? BECAUSE THEY CANT!
]-BECAUSE THERE DEAD! Leave it alone..

How much did you pay for your 333mhz WinTel clone, eh? Betcha I don't
have half in my Falcon, and yet I'm willing to bet you that I'm as
happy with it as you are with your machine! ;-)

Agreed. Now that Sheepshaver is coming, MacOS is becoming rather unnecessary.
Still, AmigaOS is the best hobbyist system.

Actually, you have used the term "Atari jihad", which I'd classify as a
murderous, fanatic cult.
```

People like the system. Why not run the system you like? If you don't like it,
dont run it?
Are you upset because not every is a turncoat like you?

>Mac - Atari - Commodore, etc.. SUCK when it comes up against my Pentium
>I 333Mhz... It blows it out of the water! BYE BYE! If Atari (Hasbro)

>BECAUSE THERE DEAD! Leave it alone..

Why not buy the Milan? It's new, it's 32-bit.
And what makes you think your Pentium would blow away a PowerMac or PowerPC-
equipped Amiga? Most of your processing power is used for dead weight.

>Yes, games like Archon and Alternate Reality were great.. but let me
>stress the word WERE! THEY USED TO BE GOOD! The games of old were great,

Why not leave said users alone? Their computers fulfill their requirements,
isn't that enough? Have you even looked at what a modern Atari computer can
do?

>Well thats just one mans opinion.

If even that much.

Methink's someone's compensating for their own...ummm, inadequacy
perhaps?

Why is it that people like you seem to have nothing better to do than
post flames in groups you don't care about? If you like your Pentium,
fine, leave the rest of us hobbyists alone.

> Mac - Atari - Commodore, etc.. SUCK when it comes up against my Pentium

What happened...did they lose play value over the years? They're no
longer "hip" or "cool" anymore is that it? Did the games somehow change
over the years?

> Well thats just one mans opinion.

More like one boy's temper tantrum. Grow up.

Geoff!

But this is a ADVOCACY newsgroup. Check out comp.sys.amiga.advocacy and
comp.sys.mac.advocacy to get a CLUE!

> I'm realy sure, exactly not with Mr. WINMacOS-are-better-Sinclair
>
> The word * A T A R I * means that this newsgroup is ONLY for Atari..

But you left out .advocacy which means lots more. Thats why you have
comp.sys.atari.st for that.

Advocacy is generaly defined to advocate, compare and defend. Actually could
be used to discuss the merits of the emerging Be OS in comparison to TOS,
windows and Mac OS. The rational and meaning behind it.

Looks like you are in the wrong newsgroup.

> A C C E P T that or get out of here.

What have you contributed (posted of value) in comp.sys.atari.advocacy. Plus
I am an Atari owner as is and have every right to be here..

By the way...What is the status of the Atari Lynx?

Jihad is not defined as a murderous cult. Jihad in context can be a peaceful
persuasion or just fanatical about anything like being a die hard Cowboy fan.

Nice Try

Whats a hobbyist system in 1998? Computer ownership in the 1980's was considered hobbyist, but in 1998 computers are commodity, necessary and common in households. Todays common computers: wintel and Mac OS have the necessary tools to function with thousands of pro software and explore the web due to software. Hopefuly the Be OS will be a competitive contender which will keep the Goliath's on their toes. Competition is good for society not monopolies.

Specifically which model do you use? Early 80's? What does that put
you? About 16 or 17?

>I now use a IBM comp. computer.

Oh, I'm very sorry.

>You people REALLY
>need to end this stupid shit already. ITS OVER.. LET IT DIE!

If we would be left to die in peace, then you wouldn't have the
problem you have now, would you?

> I LOVE the
>atari 8-bit/ST..

What is an 8-bit <g>. Oh, I understand. Your in the wrong newsgroup.

>But its dead.. Its NEVER comming back..

It's dead? What is dead? Did your Pentium over heat?
Should I send flowers?

> Why are you
>keeping this old and outdated shit alive.

I always flush. It never stays around very long.

> I understand that you might
>have alot of feelings/goodtimes and emotions wrapped up in this, but
>with all good things, they must come to an end!

Why should a good thing come to an end? Are you saying that Windows is
a bad thing, and that is the reason it will stay around? At least I
can understand where your coming from there. Windows 95-98 is the
biggest piece of shit I have ever used.

>
>Mac - Atari - Commodore, etc.. SUCK when it comes up against my Pentium
>I 333Mhz...

I'm sorry. Peter sucks. Mac G3's don't suck. They blow by your swap
meet special. Atari...what is in a name...Commodore people prefer to
have their machine refered to as Amigas now.

>It blows it out of the water! BYE BYE!

Water? Do you take your PC into the bath tub with your little rubber
duck too?

>If Atari (Hasbro)
>came out with a new 32/64 bit computer system, I would buy it right
>now..

That is a wise decission. Better save up for all the upgrading you
will have to do when you, the below average user, can actually
purchase Windows 98.

> But they have not done so.. Wanna know why? BECAUSE THEY CANT!
>BECAUSE THERE DEAD! Leave it alone..

Ummm, If I were into spamming, I might cross post this to the Amiga
newsgroup and let the PPC Amigians have a shot at this. At any rate,
with the budget you must be on to only be able to afford a P333, you
wouldn't be able to afford a decent 060. (Ehh, you say, what is
that???).

>

Just because Windows and Mac machines are the most prominent does NOT necessarily mean that they are hobby systems. How many computer owners out there are computer hobbyists? I'd say that the majority aren't. I'll bet a lot of owners have computers because, they can word process, or balance their checkbook, or because they wanted an overglorified video game system, or because they heard that the "internet is cool." That, in my book, makes it more of a tool rather than a hobby.

To me the best hobbyist system is not a mainstream system, one that has ample readily available hardware and software documentation to the masses (something that Windows and Mac machines don't have), and a machine that an end-user can build his or her own hardware for...certainly not impossible on Windows and Mac machines, but certainly not the easiest of computers for an end-user to use for this.

Every BeBox is a hobbyist system, your Mac is and my Amiga is.

A hobbyist system is used by someone who _likes_ computers, not someone who
simply views it as a necessity. The PC (save for Linux/*BSD users) doesn't fit
this description, most PCs are MS Office/Solitaire consoles.
I hope the BeOS will be a success, just as I hope M$ will shrivel up and die,
and that the great home platforms may return again to their rightful places.

You talk about competition, but you do apparently not like diversity, seeing
how you constantly attack the users of smaller platforms.

>persuasion or just fanatical about anything like being a die hard Cowboy fan.

Jihad means holy war. War is by nature murderous, and going to war for the
sake of religion is cult behaviour and fanaticism.

Why don't you start a newsgroup of your own.

That way you can rant and rave to yourself and NOBODY
has to read the worthless babbling that you think (term used loosely)
is worth reading.

From what I've read in this NG, your definitely qualified for
a section 8.

You are a waste of skin.

GO AWAY BUTTHEAD!

thanks, Iggy. But I suspect TIFKAS (The Idiot Forever Known As
Sinclap) is going to continue to rationalize and obfuscate his
unfortunate hateful slurs despite the facts - which is understandable,
considering he can be easily outwitted by a jar of Vegemite.

What's even more scary is the fact that he's supposed to be a
college graduate. But then again, if he's as much a noxious little twerp
in person as he is hiding behind a cathode ray tube, I could well
imagine the faculty at his university just calling him in to their
office and saying "here's a diploma. Go Away." :)

Actually, seeing as Sinclair only attacks those smaller than himself, such as
Atari and Amiga users, I'm certain he's rather toadying when it comes to his
superiors.

I can't tell if you're looking for a fight or not?
...but lemme tell ya this

The reason we still keep these machines alive is because they're quality machines! They are very easy to use (more user friendly than any WinTel machine on the market). Anybody can program these to fit their particular needs. Also anybody can fix them with minimal training (mostly learning how to properly soder).

If your P-2 monster breaks what are you gonna do??
You generally call someone like me who milks you for $25/hr.
Now you say if the P-2 was just as easy to fix, I'd be out of a job and should be greatful that it's not that easy.

Wrong! I would much rather live in a place where people learned to be self-reliant instead of dependant. Microsoft (who's product is mediocre at best) has capitalized on the fact that people love being sheep. His product will still run software for the 8086! Nobody uses that -old shit- software as you say anymore!! Why don't you call on Bill to actually advance computers and get rid of backward compatability for anything less than 32 bit??

Another thing!! I don't consider an "operating system" very good when it takes 100+ Megs to install and costs $100! That's highway robbery!!!

These "dead" companies NEVER did that. They got the user involved in their product and gave the control to the USER not some big corporation.

In answer to your question "who cares?" Those of us who are REALLY in the know (who've been programmers/technicians since the 80's), care. Those companies made us use our brains to solve problems. We aren't led around by our wallets to buy the next version of a bad piece of software. If you have to ask the question who cares, you must be a wannabe and couldn't possibly fully understand the answer!

> atari 8-bit/ST.. But its dead.. Its NEVER comming back.. Why are you

It is ok for me if you like "blue screen" messages all the time ;-)
I am using PeeCee and unix at the work and the PeeCee is really bad as a
reliable computer.
I don't have any use of a 333MHz computer that i need to reboot 3-4
times a day
and it takes time to get it to work properly again.

OK the ST and the 8 bit computers are slow today
but i am using a Atari clone named Hades and it is FAST.
It is not crashing randomly with a blue screen and putting my documents
and work to the "digital na na land".

So this is why a im still using the old Atari platform.
If you don't like Atari, just don't use it.

Hi,
I've got an Atari 1040 STF with an SC1224 atari RGB monitor and an
external 20 MB Supra hard drive.
$120 buys it all.
Everything works, and is in very good condition.
And yes, I have the mouse.
Also, the monitor has built-in speakers.

You also get 3 years worth of disks from START magazine, a few games, and
Mark Williams C compiler with manual.

Please mail me if interested.

Hey anyone can get a metal box, drill a few holes into it, throw a few componentsin for good measure and change 200 quid for it; then the next day add a splash of coat and change 1000 quid just for the honour of having a flash new coat.

Why people knock the humble Atari, the computer that was used by nearly all reputable musicians (anyone worth their salt). It does it's job quicker than the PC & clones, doesn't need to have a disk in the drive or even a hard drive to use (oh dear I've lost nearly everyone but the 8-bit machines).

The only thing I can see is the price, are all those moaners jealous because they have paid XXXX amount last month and their machines are only worth a tenner now! or that they have taken a second morgage out the house to buy a computer that they've seen on tv.

Or maybe, yes just maybe ACE Cards & Gifts have upset them by using the humble Atari ST in their catalogue (summer '98) for advertising computer covers; after all a computer keyboard must be cheaper than an old 520STFM with a single sided disk drive in. Or maybe they've seen the ST shown in the opening of Harry and the Henderson's:) Or is it that don't like the connection with Warner Bros. Or is it that C&VG stated that Atarian are a rather loyal bunch.

The Atari's may be old, but they function and are easier and quicker than most computers around and because of their reliability there's quite a few of them around:)

Isn't the Hades 060 based on Atari archetecture?
Cheers! for now
Steve

Everyone is indeed entitled to their own opinion but why on earth does it piss you off to see folks find use for old computers? One of the funniest experiences I ever had with a computer was when a friend and I got a (then) 10 year old minicomputer (Digital PDP 11/23) to boot. Completely useless to us, hardly any applications but still damn fun to play around with.
If someone gets happy from using his 10 year old Atari let him. Don't get pissed off, be happy for him.

Atari 130XE Computer w/authentic atari cover for Computer

Power Supply for Computer
RF/Adapter for Computer (If you choose to use TV)

Indus GT Disk Drive for the 130XE
Power Supply for Indus GT
Hook Up for Indus GT that connects to Atari 130XE

Amdek Monitor for the 130XE
Power supply for Amdek Monitor
Hook Up Cable for Monitor to Atari 130XE.

---OVER 50 GAMES AND SOFTWARE TITLES w/Disk Holder---

This is a great deal, which comes with everything you need to start your Atari 130XE collection. Everything in working condition; and all hardware tested and working fine. Software titles include, Balderdash, Millipede, Flight Simulator, Sparta DOS, Print Shop Deluxe w/graphics librarys, BASIC tool kit, and over 50 MORE!!! Comes with 2 Atari Joysticks, in working condition.

This computer is incredable, and has brought back a lot of memories for me. I hope that it will bring back a lot of happy memories for the lucky bidder. The picture of the 130XE is below, I couldn't get a picture of the other equipment, but they are in GREAT condition.

Lucky Bidder pays $20.00 Shipping.

The Atari Jihads woops meant users seem to have aggression built up. Need to relieve that agression through peaceful means. Need to find a sex-bed partner.

And how would you define a hobbyist computer today? Why can't a Mac and
Wintel machine be a hobbyist computer. What is soo special about the ST and
Amiga today? Can the ST and Amiga use Quicktime VR technology?

The answer is yes they can play and create mpeg, quicktime, and qtvr.
Maybe not a stock ST, but the Falcon, TT030, 040/060 compatibles can do
it. The more powerful amiga systems as well. You must buy a new wintel/mac
every year just to keep up and make Gates and Jobbs very rich when you can
enjoy an atari for over ten years.

Hello All,
I have a C-Lab Falcon 030 with a Toshiba internal 2.5" 540meg scsi hard drive, and an external NEC scsi CDR-MV2 1x cdrom drive.
My problem is that when ever I boot my Falcon with the cdrom connected to the Falcon's scsi port, my boot partition gets scrambled and I end up having to rebuild the partition and reloading the files placed therein. I have tried 3 different external scsi cdrom drives and have replaced the cable all to no avail. Can anyone out there figure out what the problem is and let me know so I can rectify it and make use of my cdrom drive? Thanks! :)
Falcon030, 14mb ram, 540mb hd, 17" svga monitor, MagiC, Pagestream, NVDI

I was refering to quicktime vr over the web (which is
what I presumed Momar was refering to). The only way
I could see QTVR being really spiffy is if it has some
really interesting low cpu bandwidth method of compression
in which case it would suit Atari's fine. Otherwise, it's
just another encoding/compression technique applied to a
base technology that I took advantage of 10 years ago
with my 520STm.

When WinMac types drone on about multimedia, I just chuckle.

It's all bits and algorithms, buzzwords are irrelvant.

Has the Mac got a HAM mode? -_^
The Amiga and ST can replay Quicktime, but they don't support toy technologies
such as QTVR.

>> To me the best hobbyist system is not a mainstream system, one that has

>This does not compute.. Full of contradictions.

It's not really my definition of a hobby box either. Good software should be
available, and it should be easy to use, though not a limited toy such as the
MacOS. The ability to easily build additional hardware is nice, too.

A system which is fun and easy to program and has good software, is affordable
and offers good, reliable technology, accessible to the school pupil and the
university student.

How very true, though I've no idea who the Limbaugh man is.

You know that's an oxymoron, Daniel. There /is/ no proper news-reader for the
Mac. The Mac is sadly lacking much proper INet software.
```

Without the Tramiels, there would be no ST, TT or Falcon.

Well, since you only asked "Can somebody please tell me where can I get
some....." its really kinda hard to give a helpful reply. Almost sounds
like you're in the wrong newsgroup! ;-)

In any event, what are you really trying to find?

Sheldon (Computer STudio - Asheville, NC)

Actually, as one who uses the same tactics as Limbaugh (tired old
arguments, outright lying, name-calling, bullying behaviour, obsession
with getting even, fear of feminists, and pettiness) you seem to be the

one who has the stronger resemblance to the old gasbag who is also a
national laughingstock. Or should it be Senator Joe McCarthy?

If you install M_Player as an external viewer, QTVR can be viewed over the internet (what ever that is). You can also create 'em too.

Mike

I had CyberStudio LONG before this QTVR thing,
so what's your point? Also, there's likely
posix compliant encoding apps freely available
on the 'net' that would be just a gnu c away
from being ST applications.

>Falcon030, 14mb ram, 540mb hd, 17" svga monitor, MagiC, Pagestream, NVDI

Yep, that's a result of a fucking c-lab scsi bus modification!

That what you have is a bus like an 'Y'

```
---- internal SCSI--| Terminator (Resistor Packs)
(Without Term) Falcon -----<
---- external SCSI--| Terminator (Resistor Packs)
```

SCSI says:
One Terminator is: 330Ohm from Data line to GND
220Ohm from Data line to +5

As a 'Y' Bus you only have the half of ANY resistor !!!
(Double driver output for the SCSI Chip!!)
You have two SCSI lines with two resistor packs.

Resistors in 'Y' upper circuit are only half!!

```
R
---#####---
----+ +----
---#####---
R
```

(Ask ANY electronics student)! (first grade!) :->

I can't remeber me that i saw this fuck in ANY SCSI manual!!!

SCSI (Falcon) works ONLY perfectly als one line:

```
ID7 ID0 ID1
Falcon----Drive----Drive--| Terminator
```

An not in ANY other form!
While you have this trouble, remove external devices!!

Otherways your SCSI Chip get damaged.
(But is it not the first one!)

If you like more as one scsi device, remove c-lab modification!
Use internal an external devices ONLY as ONE line!

Regards, Robert

From: dreibel@idirect.com
Message-ID: <3553d2fe.0@diana.idirect.com>
Source record: 5215

Newsgroups: comp.sys.atari.st
From: dreibel@idirect.com (Daniel L. Dreibelbis)
Organization: Toronto Atari Federation
Subject: TAF Meeting May 20th - Elections and Suzy B's
X-Newsreader: NEWSie Version 0.88 (Atari)

Agenda for the May 20th 1998 TAF meeting:

It's election night at TAF, and the first anniversary of the current executive. Did we do a good job over the past 12 months? Think you can do better? Well, that's why we exercise the democratic process at the club - if you're a TAF member in good standing, your vote counts, and you qualify to run for office as well if you feel that the club needs to take a fresh new direction that the current exec is lacking. Don't waste you're vote!

After the voting comes the night's featured speaker - Michael Burkley of Suzy B's Software, one of the largest purveyors of public domain and shareware for the Atari in the world! We'll hear about what Michael has been up to lately, including the re-release of his excellent CD-ROMs of PD/shareware through Floppyshop, and find out just what it's like to run an Atari-oriented business. His last appearance at a TAF meeting a number of years ago was very entertaining, and this night should prove likewise.

And if we have time, Dan will talk about his recent UK trip, complete with pictures and stories about his visits to Atari Computing and Systems Solutions......

See you there!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

1855. TAF Flea Market July 11th

Newsgroup: comp.sys.atari.advocacy
Date: 1998-05-09 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <3553d324.0@diana.idirect.com>
Source record: 5216

On SATURDAY, JULY 11TH, the Toronto Atari Federation will be presenting another one of their famous and popular FLEA MARKETS!

Yes, here's your chance to come to a bazaar of Atari-related software and hardware where you can shop for that peripheral or application for your ST/TT/Falcon or 8-bit that you've been looking for. Or, if there's stuff that you have no use for, get yourself a table and sell! Get rid of your old junk and find yourself a treasure!

We're hoping to have some local dealers (and with luck some out-of-town ones) show up for this event, so we've booked a larger hall in anticipation of a good turnout. Tables will be available at a cost of $5.00 each, with entry to the event at $2.00 each. The Flea Market itself will run from 1:00-5:00 PM (with setup commencing at 12:00 PM and teardown at 5:00 PM) so as to make it possible for as many people inside and outside Toronto to show up. We'll keep you posted on who will be showing up for this event as we make confirmations.

As usual, piracy cannot and will not be condoned at a TAF Flea Market - anyone caught selling pirated software or stolen hardware will be dealt with severely!

Please refer to the bottom of this document regarding getting in touch with TAF on booking tables or finding the location of the event - and we'll see you there!

The TORONTO ATARI FEDERATION Flea Market will be held in the Gold Room of the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Time running from 1:00PM to 5:00PM.

Hello all,
My name is Sam and I'm the one who sent out the CDRom Problems message a few days ago. Thanks to everyone who responded with ideas and suggestions. Unfortunately, I haven't been able to try any of the suggestions because my Falcon won't even boot now! :(When I turn on my Falcon, you can here the power supply kick on and the hard drive starts to boot, then it stops. When I disconnect the hard drive and attempt to boot from floppy, the only thing that comes on is the power supply. Can anyone tell me what to do so that I can at least get my Falcon to boot?
Getting desparate,
Sam
Falcon030, 14mb ram, 540mb hd, 17" svga monitor, MagiC, Pagestream, NVDI, ExtedDos Pro, ICD HD utilities.

Interesting..When I read the hardware requirements to use QTVR, there was no mention of compatibility with the ST and the Amiga.

What is a more powerful Amiga system today?

None of my customers buy a new Mac each year. The average upgrade cycle is around 4+ years and in many cases 7+.

Umm, me thinks this thread is to long to understand. If i'm not
mistaken, the statement above, "I was refering..." was made by you. I
simply pointed out that QTVR can be played back on an Atari over the
web, for what it is worth. CyberStudio is cool, but coupled with
DynaCadd, Chronos and Amilink, makes the complete package.

Mike

as TIFKAS has been doing the equivalent of what George Michael was
doing in that washroom in the Atari conferences for years to compensate
for his own lack of action (since his noxious personality, not to
mention his misogyny and misanthropy, precludes any woman from wanting
to be even twenty miles around him), he's a fine one to talk.

(For the record, I am over thirty and I HAVE kissed a girl :))

A clue, TIFKAS - PC does not stand for "Penis Compensator". And you
keep mistaking your Mac for your manhood. You're gonna make some
psychologist a rich person. :)

>>]-Peter S.
>>]-Saving pennies for an imac(culate conception) ;-)

actually, that nest egg should prove handy when you're thrown out
flat on your butt bt your employer when he discovers you've been
bluffing your way through your job and you have the IQ of a pine cone,
the honesty of Rush Limbaugh, and the personality of a jar of
marshmallow fluff - not to mention the fact you're the only person on
the staff whose knuckles are red from dragging on the ground. Not the
sort of image a responsible Apple dealer (which is a fine computer,
BTW), wants to convey to any potential customers - that owning a Mac
can turn one into a paranoid drooling idiot.

then why don't you use it, TIFKAS? Surely you can put better use of
the time you waste posting your mindless drivel to set up your
wonderful new newsreader. But then with your aforementioned pinecone IQ
that explains a lot.

and now, as a member of the Order of Saint Dogbert, the Patron
Saint of Technology, I wave my sceptre and order this vile Demon Of
Stupidity to begone from this newsgroup! OUT! OUT!

Of course, Mac doesn't own Amiga or the ST, nor does Microsoft. QTVR is only
available for Microsoft platforms.

>What is a more powerful Amiga system today?

'060, graphics card, possibly PowerPC. Can play QTVR under Mac emulation.

1871. Swap Meet **** NOT VAPORWARE ****

Newsgroup: comp.sys.atari.advocacy
Date: 1998-05-11 00:00:00 UTC
From: "R. Wayne Arenz" <warenz@lintek.com>
Message-ID: <35573104.0@news.netwalk.com>
Source record: 5232

******* Call for ALL Atarians -- Swap Meet in Columbus, Ohio, USA *******

***** NOTE: This is NOT vaporware -- the space IS reserved *****

This is a pre-call to all Atarians everywhere of every platform (game machines and home computers). We of the Atari Computer Enthusiasts of Columbus [a.k.a. ACEC] WILL be hosting a SWAP MEET/SHOW/SALE on Saturday, September 26, 1998 in Columbus, Ohio, USA. We've placed a security deposit and have marked off the calendar!

At this time, we are posting to provide early alert and gain a preliminary response from the Atari community. We wish to hear from all, but WE WOULD PARTICULARLY LIKE TO HEAR FROM (any remaining) ATARI VENDORS who may wish to attend so that we may include notice of their intention in later posts/publicity. We wish to hear from all so that we may better plan this activity and make certain that everyone interested receives a map to the location (in the north central portion of Columbus, just off of Interstate 71). We will shortly be able to e-mail that map in .BMP or other format.

We are not planning on making any money from this: Tables will be available to Vendors and flea marketeers for $5 per table pre-registration. This price INCLUDES door admission for one person. Obviously, we will not be planning a much greater admission price for people just wishing to walk in, look around, talk, and buy! ACEC merely wishes to continue to promote the Atari community as it has since the '70's.

The precise time and other details for the meet are yet to be set; Atari community response will be a prime factor in determining how long the doors will be open and what other shapes the meet takes.

PLEASE FORWARD this note to anyone you know -- any vendor, any collector, anyone cleaning out their closet -- who might be interested in things Atari.

PLEASE RESPOND to:

again, TIFKAS gets it wrong.

1) there is no such thing as an "Atari Jihad". No matter how many times he says it, it's not going to come true (but then again, he must read up on Hitler's "big lie" theory).

2) Atarians certainly do not want to see Apple's demise, in fact they're encouraged by how well they've been doing. Atarians aren't anti-business, they're anti-idiot (thanks Scott Adams!). Any claims to the contrary by TIFKAS only shows his desperate and paranoid side.

3) the web site we REALLY want to see - the TIFKAS doomsday clock, with the number of days before his employer wises up to what a hopeless loser TIFKAS is and removes him from his job.

well well well - claims he has a new newsreader, and still doesn't have it set up - STILL relying on Dejanews. Poor widdle Sincwap - doesn't want to get his dainty widdle hands dirty actually configuring his Mac. And he makes a big flap about Atarians having to "hack n' slash" their systems, even though it's one of the true marks of a hobbiest system.

Just to prove a point..Holy War is used in many contexes to get a point across.

In the May 18 issue of BusinessWeek in an article: Corporate America VS. The Religious Right? - as volcanic newt delights social conservatives, business frets(p. 46).

"Some Christian activists would like a HOLY WAR with business", fumes R. Bruce Josten, senior vice-president of the U.S. Chamber of Commerce.

Apologies for the personal attacks in regards to my use of the Atari Jihad is accepted.

1882. TIFKAS - the Most Clueless Mac Advocate

Newsgroup: comp.sys.atari.advocacy
Date: 1998-05-12 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <35588d49.0@diana.idirect.com>
Source record: 5243

since it's my day off today, I thought I'd do some net surfing and check out that "Apple Doomsday Clock" that TIFKAS (The Idiot Forever Known As Sinclap) posted and boasted about.

I just want to say that it's a great site! Well designed, and it has some stuff that's some excellent food for thought on Apple - even had one of Don Thomas' thoughful articles on the state of Apple/Microsoft vis a vis Atari and Sega - well done!

In fact, just to pay back TIFKAS, I decided to start a new thread in their BBBS area (Bulls**t BBS, where people talk about reality about Apple's condition). It's called "The Most Clueless Mac Advocate", and I've nominated TIFKAS as the Most Clueless, complete with some of his greatest missies, and telling their readers where to find more - I've even asked them to come here and watch TIFKAS make a complete and utter fool of himself, and join in the fun of making an even bigger ass of him!

Maybe NOW it will make TIFKAS "be a man" and confront those who are REALLY in the know about Apple and PCs to face them and explain himself. It couldn't have happened to a more deserving idiot.

methinks the TIFKAS protests too much. Do you get the feeling that he realizes he has now bitten off more than he can chew, and is desperately trying to weasel out?

For the record - TIFKAS has used the word Jihad to describe Atari users, and even used the word "Islam" along with it - thereby describing us as murderous fanatics (which in turn paints all Islamic peoples as murderous fanatics, an unfortunate stereotype which I, who work with people of the Islamic faith every day, find personally repugnant). And no amount of posturing will change that. Except for an apology to US, and a promise to never use that term again.

Interestingly, while checking that "Mac Doomsday" website this afternoon, I noticed that a number of Mac naysayers refer to Mac users as the MacJihad! I think if the shoe is on the other foot, TIFKAS would be whining about being misrepresented and demanding apologies from them - which I wouldn't find surprising from the two-faced little snivelling bag of rat hair.

Neither personal attacks nor apologies from me.
A "holy war" in plain English still carries some different implications than a
jihad, especially when used about religious activists. If it was not such a
bad word, would the senator "fume"?

No, I mean the Microsoft platforms - no mention of the hardware, only the
OSes. Apple is now Microsoft's puppy.

>> >What is a more powerful Amiga system today?

The Mac has never used 060s, so you wouldn't know its power. It's a lot faster
than the emulation employed by the Mac.
I've never read Amazing Computing myself, only browsed through it, since it
seems comparable to Amiga Info (Swedish Ami mag) in quality and size and costs
more than either the Swedish, German or UK mags (at least cosidering what you
get).

I don't know your salesmen, so I guess the Mac simply isn't that hot, going by
your logic. The people here still use 520STs, so I believe you have something
to learn about lasting computers.

well, I thought I'd let you all in on something I heard from a little dickey bird. Apparently someone was offended enough by TIFKAS' postings here (especially his sex raps) to complain to DejaNews about his behaviour.

It has now been confirmed that TIFKAS has been barred from any further posting via DejaNews. This will make this the third time he has been kicked off or reprimanded by an ISP or service (the first by cedarnet.org for posting off-topic MCIBTYC drivel in comp.sys.atari.st, the second by Hotmail for using the service to verbally harass Rich Tietjiens via e-mail).

Something tells me we won't have heard the last of him, as he'll probably now try to get a newsreader up and running on his Mac. But, boy, that must be some digital spanking he received.

And TIFKAS, if you're reading this - congragulations, LOSER, you just achieved a hat trick. :)

Watch your back Amiga RC5, the Atari Force is on the move! (Nothing wrong with a little friendly competition, eh?) If you love Atari, show your support by joining team #3921 today! That is if the stats server ever recovers from the eternal update it seems to be in today... :P (I hope its because they're upgrading the poor thing... :)

No idea what I'm talking about? Go to www.distributed.net. The official team page is at members.xoom.com/8088/rc5/ but is pretty much a placeholder at the moment...

Now where's that Atari client? :)

1) Canada is a separate country from the US. No matter how many times
you tell a lie, it doesn't make it true.

2) No, but DejaNews does have policies against posting off-topic
trolls, especially gross off-topic ones

The issue with the 520ST is that there is no logical upgrade. Many of my
classic Mac users will buy the imac becuase it shares the same characteristics
of the 1984 Mac 128k. That it was a revolutionary product of the time.

I just prefer a computer with a core OS inbedded within a ROM chip vs. a hard drive such as Windows. That way I know I can still do file manipulations without relying on extreme external software to drive it. I've seen users of PCs with DOS and Windows installed that have been corrupted causing various system failures and unrecoverable fatal crashes. There computer system is almost completely useless to them and they fork out the big bucks required to hire professional experts to salvage the data on a corrupted drive. At least with a core OS on ROM We Atari and MAC and Amiga users have a huge advantage in that we have some control over file manipulation even without a hard drive. Very simple to recover from corrupted boot drive start-up failures.

the problem here is that you shouldn't be targeting to just existing
Mac users - you'll get the law of diminishing returns all over again as
it has been with just about every new Mac that has rolled in in the past
five years. What you should be doing is not only to be targeting the new
user (which Apple is wisely planning to do in this regard) as well as
existing PC users who are fed up with Bi66 6ates' grandeous schemes,
bully-boy sales tactics and bloated, buggy software and operating systems.

Unfortunately, the iMac may well be the wrong product to be
launching as a target computer for the first-time buyer, as it has to
me some rather fatal flaws:

1) no floppy disk drive (come on - who in Cupertino has been
drinking the bong water? Floppy disks, contrary to what the press has
been saying, are still prevalent in the use of transfer of projects from
computer to computer, owing to their relative cheapness and size. Is
Apple going to be offering a disk drive as a proprietary option to those
who need it to transfer work stuff to their home iMac? How are people
going to transfer programs and important files from their old Macs to
the iMac?)

2) no SCSI ports (especially if you're expecting to sell to
existing Mac users, including those who have things like scanners,
removable media drives, SCSI to Ethernet convertors, etc. This is a big
concern to musicians who use SCSI to do hard disk recording, and for
whom the specs on this machine will be perfect for them? Is Apple
expecting those people who've paid good money for their peripherals to
eat their investment? Is Apple expecting companies to make proprietary
scanners for use with the iMac? Like it or not, SCSI is a superior
standard despite the much-improved IDE specs and they should at least
consider it an option if not to make it standard, surely they can
install a SCSI host adaptor?)

3) ANOTHER proprietary printer port that'll now require all new
printers to be designed? Apple should be instead looking at opening up

the number of printers that can be hooked up to their computers by going to a standard parallel port scheme (which the Ataris have had since 1985 :)) which could allow a popular printer from any manufacturer to be hooked up to it without having to inverst in a $100 cable/software package!

4) the $1200 US package sound great on paper, but what all do you get for that $1200. Does the monitor come with it, and if not, is it proprietary? Is the keyboard and mouse included? I ask because according to the Toronto Sun's computer section on Wednsday estimates by the time the iMac gets to Canada it will, with the current state of the dollar and imports and tariffs, the iMac will be around $2000CDN - and currently, you can get an IBM brand windows box, also at 266mHz, which will easily take about any printer, SVGA monitor and scanner on the market, for the same price! Which of course by the time August comes around will probably go for much lower! The same could well be said regarding the Dell computers with the same specs!

I think if Eddie Lunchpail or Sally Housecoat REALLY wanted to think Apple, they'd get a better computer and more bang for the buck by buying a used Quadra or PowerPC computer - there are some really good deals going on at a number of Mac dealers here in Toronto for used top-condition Macs here for much less than $2000. I mean really, who needs a 266mHz processor to write a letter or design a piece of art or telecommunicate - that'd be like swatting a fly with a Buick! Heck, used SE/30s go for $199 here and are REALLY good little computers for doing day-to-day stuff!

Apple wants us to think different - well it looks like behind the scenes the same old thinking has been going on once again to Apple's detrement.

Oh yes - and as usual TIFKAS is wrong in saying that there is no logical successor to the 520ST. There's still of course the Hades, but also there's the Milan, which at a projected $824 US is nothing to sneeze at. You can hook up an SVGA monitor, have up to 128 megabytes RAM, hook up all sorts of printers and scanners, you have the option of SCSI. Sure it has what TIFKAS would sneer at as "old processors", but when you consider that STs have always been fairly zippy and the programs written for it have been tightly coded with little bogosity (really, Easter Eggs in applications, give me a break!), a Milan looks pretty good to the average Atarian.

Full specs:

Milan -- A new star in TOS heaven

[picture of cute mini-tower]

The new power-generation revolution for the TOS market!

Starting at 1,499 DM (that's $824 US).
pre-orders available.

<flaming> New </flaming>

Milan Specifications:

o Modern PCI and ISA bus system with 4 PCI and 3 ISA slots
o Motorola 68040 CPU
o 4 SIMM slots for EDO RAM (maximum of 512 KB)
o 2 x 2 IDE Ports, Serial and Parallel interface
o interface for PC keyboard
o Operating System on Flash RAM for easy updating
o Battery backed-up real time clock
o and much more...

Software:

o TOS 4.x (a complete rewrite -- smaller and faster than the original TOS)
o Optional loadable Milan Multi-OS, a modern multitasking filesystem with modern 3D look and fully functional alternative desktop
o Telecommunications software for data-communications, VTX and FAX
o Modern textprocessing with Papyrus-Home with online help etc.
o Other useful programs such as a calculator, memos, etc.
o plus more...

Speed:

The MILAN achieves the following rates because of its modern bus system and many optimizations: (see also the test report in the ST Computer / ATARIinside 2/98)

o approximately 15-20 times the speed of an ATARI ST
o approximately 10 times the speed of a Falcon
o approximately 6 time the speed of a TT

These values can be further improved by the use of a modern VGA Graphics card. For example, the screen display can be increased to up to 40 times that of the Falcon.

Availability:

First manufactured units will be available starting the middle of March.

The World Premiere of Milan will be at the Music Fair in Frankfurt (hall 9, stand 22) and at the Atari Show '98, the 4th and 5th of April, at the Neuss town hall (Neuss is near Dusseldorf).

The Milan will ship in meaningful quantity by the middle of April.

<flash> We'll receive them immediately thereafter <flash>

Price:

Milan Standard (8 MB Ram, standard mini-tower, keyboard, mouse, 2 MB S3-Trio V64 Graphic Card, 435 MB Hard Drive, High Density floppy, file system and software) 1499 DM

Milan Design (same as standard plus the original Milan tower case) 1579 DM

Add a CD-ROM (4 times speed) TBA

Add 16, 32, 64 or 128 MB of RAM TBA

Add a SCSI port TBA

Other configurations TBA

(see, a fairly civilized post for once - nothing about Holy Wars or
treating women like doormats)

1907. FS: Atari Portfolio - The Original Palmtop

Newsgroup: comp.sys.atari.advocacy
Date: 1998-05-15 00:00:00 UTC
From: rumpf.1@osu.edu
Message-ID: <rumpf.1-1505980959100001@128.146.74.157>
Source record: 5068

The world's first palmtop computer! The Atari Portfolio runs MSDOS applications and comes with a suite of built-in software including calendar, addressbook, text editor, Lotus-compatible spreadsheet, and file-transfer utilities. Plus there are plenty of third-party shareware apps, including games and productivity tools, available for download. This package includes the Atari Portfolio, a parallel port adapter so you can hook it to your desktop for file transfers, a 64k storage card, manuals, and AC adapter. This is a real collectible! Buyer pays shipping. For more info on the Portfolio, check out this page:
http://www.ncsc.dni.us/fun/user/tcc/cmuseum/Portfoli.htm

The auction is at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=14157247

Whereas the iMac offers nothing revolutionary, but the same old tired
backwards OS and multimedia speakers.
There are several successors to the ST, such as the Falcon and the newer
Milan.

Neither the Amiga nor the Mac have the ability to manipulate files using only
its ROM OS core.
If you want a real example of an OS in a ROM, look at Acorn. They have a 4 MB
ROM containg the entire OS and a load of utilities.
```

Anybody know who the former textile executive was (is?) who headed
the Warner Entertainment Conglomerate and drove Atari into the
toilet. As described on pages 324-325 of Steven Levy's 'Hackers',
he refered to the hackers who designed and wrote Atari's games as
'towel designers'. Mr. Levy chose not name him, as there wasn't much
good to be said of him, but I'd like to know his name, if he is still
breathing, and what he has screwed up since.

Thanx in advance.

Hi Iggy...I had a couple of questions about this. I've owned Amiga's, (still got one) and I think that Kickstart resides in ROM and Workbench is loaded from disk (be it hard or floppy), right? (feel free to correct me if I am wrong. So my question is, if you can run floppy games from disk without running Workbench, couldn't you argue that many things can be done from the Amiga ROM alone? I know on an Amiga computer with no hard drive, that you can boot up floppy games. Or is it that they have their own file handling routines built in to the games/apps code? Thanks in advance for any info!

Apple _isn't_ targeting at existing Mac users with the iMac, at least that's what Jobs said, and that's why he compared it with a Compaq, not another PowerMac.

> Unfortunately, the iMac may well be the wrong product to be
> launching as a target computer for the first-time buyer, as it has to
> me some rather fatal flaws:

I don't think so. It's a great, attractive machine...

Apple _will_ offer an external USB floppy drive for $60-80. And no,
a floppy isn't nearly as essential as it used to be.

> 2) no SCSI ports (especially if you're expecting to sell to

> standard despite the much-improved IDE specs and they should at least
> consider it an option if not to make it standard, surely they can
> install a SCSI host adaptor?)

You got the iMac completely wrong. For starters, a musician who
wants to do pro stuff shouldn't buy an iMac, and Apple aren't aiming at
this market. If a musician wants a Mac, he's better off with a G3, which
is about $400 more expensive than the iMac (but comes with no monitor).
Newbies don't have scanners, newbies don't have external harddisks.
The iMac has USB ports. You seem to believe they're "proprietary". They're
not. This technology was created for the PC world, and Apple is adopting
it now. A couple of deals were already done between Apple and a couple of
companies in order to produce USB devices, like HP printers, and the
Superdisk 120mb floppy-compatible drive.

>
> 3) ANOTHER proprietary printer port that'll now require all new
> printers to be designed? Apple should be instead looking at opening up

> since 1985 :)) which could allow a popular printer from any
> manufacturer to be hooked up to it without having to inverst in a $100
> cable/software package!

Again, USB is not proprietary, so everything you wrote above is
wrong. Apple did it right. Who wants a kludge parallel port interface,
that, while being the current standard, it's far behind in technological
terms?
By the time the iMac hits the stores, you'll be able to buy HP USB
printers for it. No $100 cable/software package here...

>
> 4) the $1200 US package sound great on paper, but what all do you

Yes, a 15" flat screen Sony Triniton monitor comes with it. What do
you mean a proprietary monitor? It's built-in! Both USB mouse and keyboard
are included.
What Apple hopes with the iMac is that, with its good looks and the
MacOS inherent ease of use (and of course, with all the bad rep that
Microsoft's been getting recently), they'll be able to make people think
twice before buying a computer.
I don't know about you, but I'd much rather have an iMac, cutting
edge technology, for the same price of a klunky, old Pentium job, with
Win95.

> I think if Eddie Lunchpail or Sally Housecoat REALLY wanted to think

> doing day-to-day stuff!

I agree... I've got a G3/266, and it's _fast_, just about the
fastest computer I've ever seen or used (and believe me, I see Pentium PCs
all the time!). But I also agree that nobody _needs_ this much
computational power. But with all the advances in PPC technology, Apple
managed to cram a decent, fast 233mhz G3 on the relatively cheap iMac,
while they could've opted for a budget deal. I believe Apple made no
concessions regarding new technologies with the iMac. As Jobs said, do you
want today's technology for $999 or tomorrow's for $1200? :)

>
> Apple wants us to think different - well it looks like behind the

When exactly is the show, and where can I get more info? Is there a
website concerning the show?

Thanx,
Mark S.

Or, as previously posted in the "Cracks In Windows Armor":
re-re-install Windows 95
re-re-re-install Windows 95

My favorite .sig (seen elsewhere) is:
"What do you want to install today?"

-- George Crissman
-- strads@tmisnet.com

Followup set to c.s.a.a.

In the March Issue of "PC Computing" (Ziff-Davis
publishing, USA edition, page 87, "Guilty" by
Paul Somerson) is the following (edited):

"OK, I admit it. I was wrong. I've been a Microsoft
defender for a decade and a half ... but today I just
switched sides. And it's Windows that put me over the
edge."

...

"You normally reboot into "Safe Mode", ... but no joy.
And the skimpy manuals, endlessly busy tech-support
lines, and so-called Web support sites were a time-
consuming, useless pain."

"So I reinstalled Windows. It kept stumbling over
files where the versions on the Windows CD (remember,
this is a brand-new PC out of the box) were older than
similarly named files on the hard disk."

...

"So I tried to re-reinstall Windows with the older
files. ... At the very end of the tedius process it
flagged bad clusters, and made me hit the Enter key
to fix them _one_ _at_ _a_ _time_. After _2,000_ (!!!)
mind-numbing Enter key taps, I gave up and propped a
manual on the Enter key to keep it pressed down."

...

"When I eventually re-re-reinstalled it, half the
peripherals didn't work. What a mess. Windows is
the ultimate tar baby -- the more you struggle the
deeper you get until you're hopelessly ensnared."

...

"We recently asked you to tell us your PC horror
stories. And you flooded us with venom-dripping
tales of woe, almost all of them about Windows.
Windows is an utter piece of junk. It is a big
joke, except that the laugh's on us. It is an
absurdly overcomplicated usability nightmare."

"This is nuts. Microsoft _netted_ around $4 billion
from OS sales last year -- you'd think they could
spend a few bucks fixing it."

<wow!> I sent a polite email to Mr. Somerson explaining
that Microsoft's competitor since Windows 1.0 -- GEM --
is still around (as MagiC), that it (GEM) had been
continuously in use and updated during that time, and
that it presented a worthwhile alternative to Microsoft
for basic business applications (specifically mentioning
the Papyrus word processor and the Texel spreadsheet).

He replied that he was "unaware of this development"
and that it might receive coverage in an upcoming
"alternate OS's" article.

Out of seriousness or out of sarcasm does that remark originate?

Most Amiga owners know that most of those who worked on the old 8-bit
Atari line developed the Amiga after quitting (or being fired) from
Commodore when Jack Tramiel bought the company in 1984(?).

Umm... I think you're a bit off here. Jay Miner left Atari while Warner was still running the show because they refused to give him funding to develop a 68000 based computer. I don't know how he ended up at Amiga, but they developed Atari 2600 games & peripherals to fund the design of their computer.

When Jack was ousted from Commodore, he started a new company called Tramiel Technologies Ltd. He hired away many of Commodore's engineers, and they began work on what eventually became the Atari ST.

Meanwhile, Atari Inc signed a deal with Amiga for use of the chipset. The first year would only be for video game use (arcade machines? home consoles?) then after that they could use it in computers.

Then along comes Jack - he buys the consumer products side of Atari, kills all the video game projects and most of the 8-bit stuff, and goes full speed ahead to get the ST ready for market. Thousands of people lost their jobs, but hey are not the ones who designed the Amiga - the Amiga was pretty much done from a hardware standpoint.

At this point, Commodore was stuck with a decimated engineering staff and no next-gen computer design, and Amiga was stuck with an Atari deal that was looking less attractive everyday. So Commodore buys Amiga and the Atari deal goes out the window.

I probably got some of the details wrong, but that's how I understand it.

...and anyone else with half a brain cell would just get the
1/2 price PC and run Linux (or NT Workstation if it could
manage it).

Technocratic pomposity didn't sell in the 80's and it wont
sell in the 90's. At least in the 80's the PC had considerably
less intrenchment and a horrific interface.

Apple should be moving away from that sort of foolishness
and not back towards it.

The iMac is about as progressive as a $600 bargain box PC.
That rhetoric will only antagonize the iMac's target buyer,
especially when they notice it is indeed '$600' and not
'$995'. They will rightfully percieve themselves being assumed
fools and act accordingly.

>not another PowerMac.

my comments were more directed at TIFKAS, who boasted that he would
sell many of his iMacs to the existing Mac community, which of course
is incredibly short-sighted in the long run for setting up a really
good user base - I certainly did commend Apple's goal to go after the
first-time computer user market, and suggested that their position
would be to go after those fed up with the shortcomings of the PC
platform as related to Bill Gates and the Wintel monopoly. But you'll be
sure it's a given that existing Mac owners will also buy the machine and
will expect to be able to use their existing peripherals with it.

>a floppy isn't nearly as essential as it used to be.

this is not a solution by a long shot, as a matter of fact this only contributes to the problem - everyone I have mentioned the lack of a floppy drive to have said that the lack of same as standard equipment is a Bad Idea (and something which the iMac's competition will definitely use as a black mark against it). I still say that a floppy drive is still considered a standard for transferring text files and other work to your home computer, as it is the only one that practically all computers built today share (especially in light of the fact that, despite the popularity of the ZIP, there is no other removable media standard) - and that even first-time computer users will balk at having to pay an additional $80 to get something which is standard on other machines. Granted, what with the iMac's design it would be hard to shoehorn a floppy drive into it.

> 2) no SCSI ports (especially if you're expecting to sell to

Believe me, at this pricepoint Apple could make a killing at marketing the iMac to musicians, as something with this amount of raw processing power and speed is something that hasn't been seen since the ST's heyday - AAMoF the G3 processor is considered the best processor to run Cubase Audio Mac on! And believe me, musicians, especially when they're starting out, are notoriously thrifty when it comes to buying new equipment. Plus with the lack of space most home studios have, the

size of the iMac would be perfect to shoehorn in. Why not market to a number of niches rather than just one?

> Newbies don't have scanners, newbies don't have external harddisks.

but they'll soon be very frustrated when they discover that they can't hook up a scanner to their iMac, nor can they hook up a backup hard drive of their choice (removable media or not) to it either. How is an iMac user expected to back up their hard drive to ensure that their setup is secure or that they won't lose important documents or graphics files? Is Apple going to guarantee that the built-in IDE drive will never fail - good luck. And what about Ethernet to SCSI connectors - sooner or later some die-hard users are going to get frustrated with their modem speed and want to go to the faster route,

>The iMac has USB ports. You seem to believe they're "proprietary". They're
>not. This technology was created for the PC world, and Apple is adopting
>it now. A couple of deals were already done between Apple and a couple of

>Superdisk 120mb floppy-compatible drive.

I stand corrected on the USB; but still, why not go to the accepted standard routes , ie SCSI for the backup hard drive and other peripherals, and a parallel port for the printer? Why limit the choices of the new user to only those products designed for the new ports by a limited number of companies, instead of opening the choices on the many peripherals that could be used with this wonderful new machine? Case in point - the ZIP drive, which many Mac users have and love - what if a friend of yours (or your boss) has a Mac project or software that needs to be transferred and they have ZIP drives? Plus, about those people who buy the optional floppy drive - that leaves only one USB port to plug something else into: the printer or the backup drive? The lady or the tiger?

>

As one who has used a "kludge parallel port" for years to drive a variety of printers on my STs and Falcon with absolutely no problems, all I can say is "if it ain't broke, don't fix it" :) The proprietary port for the printer on the Mac has always been something that sticks

in my craw (and my mother's - she's in desperate need of a
Mac-compatible printer for her SE/30 for her business and all the
solutions Mac-wise are way out of her price range). Continuing to limit
the choice of printers to a handful as opposed to opening the number of
printer choices from a wide variety of manufacturers is not going to
win Apple any fans, newbie or not.

> By the time the iMac hits the stores, you'll be able to buy HP USB
>printers for it. No $100 cable/software package here...

there's no doubt that HP makes excellent printers (I own a DeskJet
540 which I'm very pleased with, and I'd like to get one of the new 700
series printers), but what about CHOICE for once? How about giving the
newbie, as well as the seasoned Mac user, the choice of hooking up an
Epson, Olivetti, Canon, Brother, Citizen, or NEC printer right up to
the computer for true Plug N' Play, as opposed to once again limiting
the choices (Apple's choices) to a few compatible models? Is that too
much to ask?

I didn't actually see a picture of the iMac until two days after my
original diatribe, so I was wrong on that - that was a good move on
Apple's part. The MOUSE is USB? Oh dear, after you have the floppy and
the mouse hooked up, kiss having a printer and backup drive goodbye :)

> What Apple hopes with the iMac is that, with its good looks and the
>MacOS inherent ease of use (and of course, with all the bad rep that
>Microsoft's been getting recently), they'll be able to make people think
>twice before buying a computer.

the small footprint of the iMac will certainly be a good selling
point. As for the looks, I'm not so sure I like the design - it
resembles those ORBIT trash cans that I used to see along the highways
in Manitoba in the 1970s :) Definitely agree with you that what with
Microsoft's new problems (especially with the anti-trust suits to be

launched tomorrow by the US government and the 20 states) Apple has
their best chance in years to make an impact - but not with a flawed
product like the iMac.

Definitely the iMac for $1200 - but for $1200US, or $2000CDN (which
is a huge sum for someone like me, as the economy hasn't trickled down
in my direction yet) I would certainly have certain expectations of it,
including being able to use my existing peripherals from my Falcon
(including homemade hard drive, Syquest removable drive, Microtek
scanner and HP printer) rather than to spend extra monies on
peripherals to use with it. Oh, yes, and a standard floppy drive for
which I could install MagiCMac and not have to eat my TOS applications :)
An over $3000CDN G3 is NOT an option for me.

>

I hope the above will be able to see why I'm not impressed with
Apple on their design for the iMac, which I consider a closed system.
Looks like Apple is going to keep releasing the Pippin until they get
it right.......

<snipped details of forthcoming ST-compatible>
>

isn't it wonderful. TIFKAS could certainly take some tips on how to have a true debate without having to stoop to the lowest common denominator from our example :)

Yea, it would be nice for them to throw some of the discarded 060's
and technology our way, being how they now have PPC cards:).

Yes, this is a very nice thread, in general. The iMac has been roasted and praised in great length on other newsgroups, so a consensus is building, which is: If you are computer proficient enough to be on these newsgroups, the iMac isn't for you. It's for your saintly old mother who is fearful of computers and just wants a way to enter the cyber world. I consider all Atari user power users. I haven't met one yet that didn't know the system inside out and a high percentage are programmers, who first began peeking and poking at system operations on the old eight bits. Which, by the way, would almost be a 'flawed' machine by the logic expressed here. I don't think so. It was a great buy, had nifty accessibility (which you had to work at), and packed a great punch in 64K(800XL). In fact, without any great stretch, the iMac could be seen as the 800XL of the future. USB hold a great potential with it's hot-swapability and 127 device limit. It's not as fast as SCSI, but neither are parallel ports. It's an entry level machine, no more. I would like to see a detailed statement on a $600 wintel machine that had any functionality at all. After memory upgrades, graphics cards and all the other little tweeks and adjustments necessary for graphics use, I'll bet the final price is a bit more.

For a doomed machine, it's getting a *lot* of bandwidth.

Nah, I'd rather use a $600 PC as a terminal (X or otherwise)
despite the fact that the iMac looks oddly similar to a VT100.

>is fearful of computers and just wants a way to enter the cyber world. I

They reflected the market. That's the real problem with
the iMac. It fails to do this. At least Apple could have
been a little more innovative in their case design or
made the bundle-monitor a 17" or better.

>expressed here. I don't think so. It was a great buy, had nifty

The USB ports would make a nice addition to other
standard ports for which you can already buy supported
hardware.

>hot-swapability and 127 device limit. It's not as fast as SCSI, but
>neither are parallel ports. It's an entry level machine, no more. I

Actually, the retail price of the sort of PC components that
make up the iMac come to about $700 at pricewatch including the
monitor but not including the motherboard. That leaves the consumer
or OEM another 500-600 to play with wrt P5/133 - PII/233 Dual CPU
motherboards.

$1300 for a machine like the iMac is Apple pricing, period.

BTW, any $50 pentium motherboard supports USB these days so
that's nothing really impressive.

The kind of people this machine is marketed to aren't going to
care about who's 233 cpu is really faster. They'll just compare
the numbers they understand & buy the PC bargain box by the door.

1933. Update: TAF MonSTEr Flea Market July 11th

Newsgroup: comp.sys.atari.advocacy
Date: 1998-05-19 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <3560f51c.0@diana.idirect.com>
Source record: 5094

here's an update to the TAF MonSTEr Flea market to be going on July 11th in Toronto:

we have decided to not only make this a chance to sell and buy all sorts of hardware and software for our members as well as those outside the club; we have also decided to make this an event whereby you can learn just what you can still do with an Atari, including the Internet, desktop publishing, scanning OCR, and much much more! So far we have confirmed an Internet demo at the show (using the suite of available Internet clients running under STiNG); we also hope to have a Calamus demo and a music demo going on as well.

We're also hoping to have a number of dealers at the show as well, with people to be announced as they are confirmed. So far we will have a booth for the fanzine ST+ at the show.

We're in the midst of starting a promotional blitz for the show, with advertising in a number of the computer tabloids, the weekly tabloids, and of course on the USENET.

Anyway, here's the original announcement about the show :

Subj : TAF Flea Market July 11, 1998.

SATURDAY, JULY 11TH, 1998 is the date for another popular Toronto Atari Federation FLEA MARKET! The doors open to the Public at 1:00 PM and runs to 5:00 PM.

Yes, here's your chance to come to a bazaar of Atari-related software and hardware where you can shop for that peripheral or application for your ST/TT/Falcon or 8-bit that you've been looking for. Or, if there's stuff that you have no use for, get yourself a table and sell! Get rid of your old stuff or find yourself a treasure!

We're hoping to have some local dealers (and with luck some out-of-town ones) show up for this event, so we've booked a larger hall in anticipation of a good turnout. To help with the costs of the event, the following will apply.

A Half-Table costs just $5.00, Full-Table just $10.00 each. A Half-Table is FREE to TAF MEMBERS. (Dealers are expected to contribute a little more <grin>), with entry to the Flea Market at $2.00 per family (Free to TAF Members).

The Flea Market itself will run from 1:00-5:00 PM (with setup commencing after 12:00 PM and teardown at 5:00 PM).

This should allow enough time for as many people inside
and outside Toronto to show up. We'll keep you posted on
who will be showing up for this event as we make confirmations.

As usual, piracy cannot and will not be condoned at a TAF Flea
Market - anyone caught selling pirated software or stolen
hardware will be dealt with severely!

Please refer to the bottom of this document regarding getting
in touch with TAF on booking tables or finding the location
of the event - and we'll see you there!

The TORONTO ATARI FEDERATION Flea Market will be held in the
Gold Room of the North York Memorial Community Hall on the
Lower (or Concourse) Level of the North York City Centre
Library Building at 5110 Yonge Street at Parkhome Avenue.
Parking garage inside the complex next to the Novatel Hotel
Those using public transport can take the TTC's line to the
North York City Centre Station and walk through the tunnel
into the concourse, down to the food court, turn left and
find the Memorial Hall.

That's Saturday, July 11, 1998, 1-5pm for the TAF FLEA MARKET.

>What's an Atari ?

Now THERE'S a question!

The consoles:

Pong. The Atari VCS with that awesomely bad joystick. Then the 7800 came along. That was kinda nice. Anyone remember "The Adventures of Cute"?

The computers:

The Atari 400 started it all with it's podgy design and membrane keys. Then..erm...was it Jay Miner? Anyway, he designed the 800 - a seriously wicked machine for it's time.

Then, after the XL 8-bit range, came Atari STs. The healthy competition to the Amiga. In fact, I loved Atari STs so much, I didna change to the Amiga until 1991. But I've never looked back.

Anyway, the Falcon was a technically sound machine backed up a failing company.

And finally - "Atari Teenage Riot". Oh dear.

It's strange how die-hard Amiga users have become with their machines. Four years have passed silently and yet advocacy is still alive as ever. Where would I be without my morning fix of Arami, Viper, Corn and Jack Andrews, Pete Kittel and the rest of them? :)

The Atari's still cool by the way....

That's right... The entire 'kernel' of the OS lives in the 512K ROM. The stuff on disk are commands, drivers, and libraries. (of which those required for a full boot only take up about 300k, but that's not the topic here...)

> ... So my question is, if you can run floppy games from disk without
> running Workbench, couldn't you argue that many things can be done from the
> Amiga ROM alone? I know on an Amiga computer with no hard drive, that you
> can boot up floppy games.

Yes. The OS2.0 ROM actually includes about 30 commands (cd, if, newshell, setenv, for example). You can boot with _almost_ a freshly formatted disk - you only have to 'install' the bootblock with the standard bootable bootblock. The bootblock basically just signals the OS to open a Shell, and run the startup-sequence if present, though - no real files or anything.

Now, true, since rather useful commands like 'dir' and 'copy' aren't present in the ROM and have to be run off disk, a boot like this isn't too handy, but it's still true that it's possible. The core OS still has the routines, of course, there just isn't an AmigaDOS command ready.

Well, Daniel:

That was an interesting reply. I heard something from a pc-turned-mac user(recently-he bought a G3) about the iMac. He says, (and I can't verify his facts so take it as sheer rumor) that 50,000 iMacs have been pre-ordered already from Apple. Now, 50G can be seen as small potatoes(the plural makes the e ok) but it *is* interesting that people want to buy a machine that basically hasn't been built yet. Just about everyone on the Mac boards say that it isn't for them, so...? Who's asking for them? One critical announcement from Imation and Panasonic provides a USB superdrive for the iMac(specifically) that reads: old PC floppys, new PC superdisks(120MB), old Mac floppies and new Mac superdisks(same 120MB). It makes me kind of envious, seeing as I have to have two drives to do that, one of which is built in and is rather inaccessible. I might have to revise the saintly old mother line.

Oh, and one other connection between two computers separated by a vast amount of CPU development time: the iMac seems to be regarded as a rather novel and speedy game platform.

Thanks for the politeness. The person who you refer to as TIFKAS is an abberation as far as I'm concerned. He reminds me of wintel trolls that set off chain reactions in Mac groups for no good reason as far as I can see. He might be feeding off of your vitriol.

1937. iMac, it's doomed.

Why not? I would LOVE to have it for me, on paper it sounds like
it's a great machine, speed and memory wise. It's just that for $1200 US
($2000 CDN) I would expect certain things to be standard, like SCSI
ports, a floppy disk drive, and a standard printer port. Heck, a new
C-LAB Falcon starts at around $1100 CDN (around $350-500 CDN used) and
has all three standard, and makes one heck of an Internet machine to
boot!

> It's for your saintly old mother who
>is fearful of computers and just wants a way to enter the cyber world.

Well, that would make it one of the smallest niche markets there is,
catering to little old ladies who want to surf the Weeb, isn't it? :)
Unfortunately, with its lack of standards, Apple may be seen as ripping
off widows and orphans with this machine. (BTW, MY saintly old mother,
who loves the Internet, already owns her own Mac which she runs her
business on and is hoping to get her own ISP account soon, as she uses
my brother's home machine, also a Mac, for her web surfing and for
printing out her projects: having been burned in too many
deals with PCs, she would be wary of buying any computer that didn't
come with a floppy disk drive as standard)

> I consider all Atari user power users. I haven't met one yet that

Thank you, I consider that a compliment! Yes, these days just about
every Atari user out there is a power user thanks to the Tramiels
pulling the rug out from under us - why do we do it? In my case, a
pioneer spirit, too dumb to quit and ornery to boot :). Likewise, I
find most Mac users to be quite knowledgable and great guys (save one
nasty little microbe from Texas who's been strangely quiet the last few
days, I wonder why? <evil :) >)

we're comparing two different eras here - in the old 8-bit era just about EVERYTHING was proprietary, save television sets and cassette recorders. You could say the same about the Commodore 64, Spectrum, Oric, BBC, Dragon, CoCo, Texas Instruments, Intellivision, Adam, etc! In THIS era, however, there have definitely been standards and benchmarks that computers (especially Macs) are expected to live up to by consumers - including floppy disks, standard printer ports to connect THEIR choice of printer, some way of hooking up backup drives of THEIR choice.....

USB hold a great potential with it's hot-swapability and 127 device limit. It's not as fast as SCSI, but neither are parallel ports.

First find 127 devices to hook up to it :)

> It's an entry level machine, no more. I would like to see a detailed
>statement on a $600 wintel machine that had any functionality at all.
>After memory upgrades, graphics cards and all the other little tweeks
>and adjustments necessary for graphics use, I'll bet the final price is
>a bit more.

Wouldn't it be a better benchmark to compare a Wintel machine that was within the iMac's price range? Besides, having heard benchmarks on how well Linux and OS/2 run on PCs, I've come to the conclusion that the problem stems all from Microsoft and Windows - David Troy from TOAD did tests between Linux and Windows '95, and found that the Microsoft product all but crippled a Pentium 75mHz, but it was a pure hot rod under Linux. I think if Apple continues on in some way to develop Rhapsody, there would be your ultimate PC system for the net, with no jiggery-pokery and no Bill Gates :)

> For a doomed machine, it's getting a *lot* of bandwidth.

if anything, Apple has certainly been getting a LOT of attention on this, and that's good in its own small way. At least it beats being ignored.....

1938. Bill Gates' False Analogy

Newsgroup: comp.sys.atari.advocacy
Date: 1998-05-20 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <35623373.0@diana.idirect.com>
Source record: 5149

Just for fun, let's start a round robin....

you may have heard about Bill Gates' reaction to the lawsuit lauched by the US Justice Department and the 20 States regarding anti-trust action against Microsoft. When told that one of the conditions of dropping the suit was to remove Internet Explorer from within Windows '98 and include Netscape and another browser to the package so the consumer would have a choice, Gates angrily said "that'd be like Coke being required to add three cans of Pepsi to their six-packs".

well, I've thought about Bill's rather weird analogy, and these are some of the reasons I feel they don't wash:

1) no company has ever forced their employees to drink Coke and only Coke while at work

2) If Coke bailed out Vernors with a cash loan, they wouldn't require Vernors to put only Coke in all their future bottled and canned product as part of the deal. (a)

3) Coke would never feel threatened enough by Pepsi to want to use tactics like giving away all cans of Coke for free (and if they do, where's the line?)

4) Coke would never put out a product as bad as Microsoft "Bob" (hey, even New Coke wasn't THAT bad......)

5) Coke's help lines wouldn't charge by the minute as you explain to them you found a dead mouse (or even a live mouse) in a bottle of their product.

6) Coke doesn't make the requirement for satisfaction of their product be based on their customers' speed and onboard memory.

7) Coke doesn't put chemicals in their product that cause those who then drink a Pepsi to have a case of the green-apple quick-step.

8) Microsoft, no matter how hard they try, will never, ever make a product as cool as Cherry Coke.

any more? don't be afraid to jump in......

a) for those in Europe and other Vernors-free zones, a soda made by a small company in Michigan that is a rather interesting cross between ginger beer and cream soda; it can also clear your sinuses in seconds flat.

Well, Coke won the contract at the Naval Weapons Center where I am employed. Not a Pepsi on the base:(. So now I feel just like the people that do not wish IE included in Win98 feel:). Of course, there is no rule that says I cannot carry my 2ltr Pepsi in front of the Coke deliverly people while loading the machines:). Hell, I even taunt the HP guys running Unix as to why it takes so long to compile their simulations over the network. Which brings to mind, jezzz, could you image MiNT and N.AES running native under one of those processors? The network manager still can't believe what MagiC Mac does for a Mac:). Are these people ignorant or what? Why do we keep our O/S'es so secret from the business world?:).

> 2) If Coke bailed out Vernors with a cash loan, they wouldn't

Ahh, Vernors, my favorite refreshment. I hope that is only a rumor, because like MS, Coke would probably screw it up. Besides, Pepsi has Cindy on their side:). Coke commercials remind me of Apple commercials...
>

1940. Atari Users of North Texas(Any left?)

Newsgroup: comp.sys.atari.advocacy

Sportsfans...

I had the chance to attend the monthly DFW Xchange consisting of all the area usergroup platforms at the Dallas Info Mart Center on 5/16. I was there to make an apperance at the Apple Corps of Dallas to watch the fine demo by the Macromedia folks and watch the Steve Jobs video that unveiled the imac and PowerBook G3's.

I also wanted to indulge in a little nastolgic by checking out the Atari users of North Texas. I went to the room on the sixth or seventh floor(Apple Corps on first floor). I poked my head into the room and just two folks were inside. I was puzzled...Was that it or the others were at lunch. I wanted to continue my pastime of building up my Lynx library... Came home disapointed.

Get real. The $1299 price is resonable. I know my Comps will have no
problems unloading these units. The imac will eat that C-Lab Falcon and still
be cool under the hood. Does the Falcon price include the monitor and a
userful valuable software bundle?

You get the meaning. The imac has plenty of standards.. The USB ports are
standard in the wintel world. CH has gone over to USB and will have a line of
their game controllers compatible with the imac in time for the roll out.
Also there will be USB floppy drives to silence the whiners.

Been too busy making a living. Handling Comp accounts is no picnic. The
PB3400 I have is fine for now. When I am in Cupertino in late summer, I am
hoping for an upgrade to a PowerBook G3.

The imac hasn't failed anything yet because its not out yet. I hate to burst
your bubble, my Comps will sell tons of these imacs.

And how would you explain the success of the $1299 233 K6 Compaq Presario
model that does not include the monitor in its price? The imac completely
destroys this Presario period.

Sounds like you are barking up the wrong tree...

Nope...Compaq is targeting the $1299 233 K6 Presario. Price does not include monitor. The imac completely destroys this Presario. As Jobs stated that this Presario is yesterdays technology with a new price. Does these $600 boxes include monitor, sufficient memory, HD and software bundle. Apple will have a nice usable bundle that include ApplewWorks, FileMaker Pro, Quicken 98 deluxe and unamed game titles. I not expecting low quality game titles boxed with the imac.

a) 'valuable software bundle' is fairly meaningless rhertoric.
b) that mac has to work against it's bloatware in OS and apps
before it gets ANY work done.

>

People interested in 400 or more Mhz could just
pay $1900 for a 533Mhz Alpha, $1200 for a Dual PII/233
equipped the same way as your iMac. Even the MacVocate
speed demons will be gravitating to something that's a
little beefier inand out of the CPU.

>

Of course it is: it's a nice big MonopolySoft compatible
brand name. They don't have to worry about Maud being
dissuaded by the rest of the herd (in or out of the store).

>
>> BTW, any $50 pentium motherboard supports USB these days so
>> that's nothing really impressive.

>
>Whats your point?

USB support is YESTERDAY. It's a minor option standard on
any other motherboard in production. Except all those other
motherboards (cheap generica included) actually support
hardware available now (as opposed to when the vendor gets
around to it).

>
>> The kind of people this machine is marketed to aren't going to

It's $946, Actually. So, Compaq delivers more for less
TODAY (instead of August).

>model that does not include the monitor in its price? The imac completely
>destroys this Presario period.
>
>Sounds like you are barking up the wrong tree...

It benefits from what PC wares have benefited from over
the last decade: Monopoly compatibility and the enhanced
market that implies. Apple has no such position and needs
to market accordingly. They need to compete with the entire
PC maret VISIBLY and not just compare themselves to easy
targets.

Not hardly. The specmarks and quakemarks for the PPC750
tell a considerably different tail. The PPC750 is no
more impressive (outside of commercials) than any comparably
clocked intel (or clone).

>
>> ...and unlike those cheap PC's sitting by the door,

The corporate webpage said something to the effect
of the imac being targeted towards the low end.

I keep track of the market quite often, actually.
It's quite easy, actually. That's how I know your
Compaq numbers are %25 off. That's quite a bit of
error. Must've done those figures on your mac. It
was an iterative algorithm that just didn't have
enough time to finish... '-p

It's $950 actually. Yes they will likely antagonize Maud. However, the lack of Maud will not significantly shrink Compaq's target market. Compaq has some leeway being in a 10x larger market segment that a company with a much smaller real market.

Apple is not a Louis no matter what it thinks, it shoudn't act like one. The peasants will just laugh.

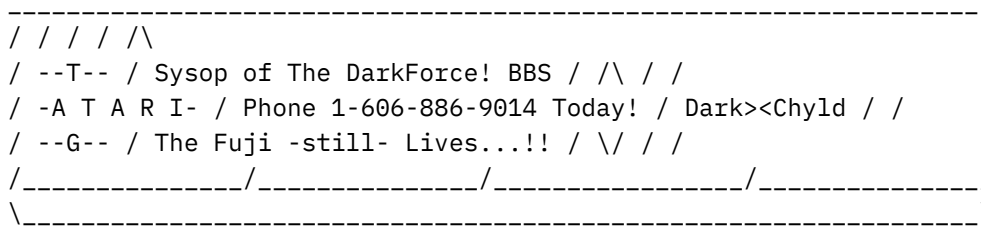
]-Yes. The OS2.0 ROM actually includes about 30 commands (cd, if, newshell,
]-setenv, for example). You can boot with _almost_ a freshly formatted disk -
]-you only have to 'install' the bootblock with the standard bootable bootblock.
]-The bootblock basically just signals the OS to open a Shell, and run the
]-startup-sequence if present, though - no real files or anything.
]-
]-Now, true, since rather useful commands like 'dir' and 'copy' aren't present
]-in the ROM and have to be run off disk, a boot like this isn't too handy, but
]-it's still true that it's possible. The core OS still has the routines, of
]-course, there just isn't an AmigaDOS command ready.
]-
]-
]--jupo (hoping not to get flamed for his Amiga advocacy... ;))

Hi Justin and Lynda. Thanks for the info! BTW, how do you guys feel about
the announcements at the World of Amiga '98? Thanks again! ;-)



1950. FS: Portfolio Owners Manual

For anyone who may have recently picked up a used Atari Portfolio without the Owner's Manual, I have a few of them lying around, along with the Quick Reference Cards. You can have one (Owner's Manual and Quick Reference Card) for $3 plus $1 for regular mail shipping, or $3 for Priority Mail shipping.

Please respond in Email to: s.winick@worldnet.att.net

The economy hasn't been good to you lately? Time to get a real job and leave
that paper mill behind.

With Amiga releasing a new version of its OS; could this be possible for Atari ?
Perhaps with a port to Intel and PowerPC ?

Geert

1953. My C-Lab Falcon MKII

Newsgroup: comp.sys.atari.advocacy
Date: 1998-05-21 00:00:00 UTC
From: angief18@aol.com
Message-ID: <1998052116034400.MAA03736@ladder01.news.aol.com>
Source record: 5164

I have a C-Lab Falcon MKII which I purchased from Toad Computers 2-3 years ago. Since December of last year I had been having trouble booting the Falcon with the cdrom drive and scsi cable connected to the Falcon's scsi port. Every time I tried booting the Falcon in this way, the boot partition would become corrupted and I would have to reload the boot files. The other day, I tried it one more time and the worst happened...the Falcon no longer operates. The fan comes on, the hard drive starts to spin up, and nothing else happens. I disconnected the hard drive and tried to boot from floppy---nothing. The fan comes on and the power indicater light comes on but that's it. No floppy activity. Does this mean that my $1400.00 computer is now junk? I am now very frustated, sad, and angry. What can I do now to rectify this situation that won't cost me an arm and a leg to fix? All I really want to do is to get the machine up and running again in order to be able to use it as trade in for a TOS clone motherboard/cpu.
Thank you,
Sam Ferrer

Falcon030, 14mb ram, 540mb hd, 17" svga monitor, MagiC, Pagestream, NVDI, ExtedDos Pro, ICD HD utilities.

I HAVE a real job, thank you - and it doesn't involve pushing paper.
And I still don't want to eat the investment on any of my peripherals,
which I've invested in and work perfectly well for my needs. Or is that
beyond your comprehension? You should read the whole of my posts for
clarity and understanding.

Looks like I'll have to invoke St. Dogbert again to banish this
Demon Of Stupidity.....OUT! OUT!

why?
silly question.
superior os naturally, but you wouldn't know, heh?
already a few developments:
fenix, magic, TOS4+(Milan), Dolmen(Phenix), and the AES's
(oAESis, Naes, XaAES, Geneva, ...)
Magic is the leader as it has already been ported to the Mac and PC.

As I mentioned earlier, Apple's goal is the first time buyer, but I know many a Mac addict who's going to buy an iMac as soon as it's ready for sale. Why? Because it's plain cool! If I had the money, I'd buy one right away! The iMac has limitations? Of course it does, but think of it as a "side" machine. For instance, take a current Mac user, with a 8600, a quite expensive machine (at the time it was released). This person has a pretty fast machine, and doesn't need to upgrade (Mac users don't have that disease common to PC users, upgrading every time Intel announces something "new"...), but he doesn't want other people

screwing around with his machine, maybe because he does his SOHO stuff on it, etc. So he gets a cheap iMac, hook it up to the 8600, and there you go, you got a very fast "side" computer, quite cheaply!

I don't think so. Have you read the news recently? Most of the big boys in PC cloning announced PCs with _no_ disk drive! Funny isn't it?
First time buyers don't even know what a floppy disk is. If you don't know what it is, you obviously don't need it!
People have to get over with it, floppys are dead and gone, and congratulations for Apple for taking the brave step.

Because you just can't please everybody! But who nows, a year from now, we're going to see a change in direction, with lots and lots of USB devices available, including scanners, and MIDI stuff... This would make the iMac an attractive proposition for musicians too... But who knows, this is just some wild speculation...
Oh, as for scanners... It seems USB scanners are already available... Do you remember Bill Gates' hilarious COMDEX demo? :)

They can. Have you heard of a SuperDrive? It's a 120mb device that reads/writes to 3.5" floppies too. It was announced a few days after the iMac. It's going to be sold at less than $100 too...
Remember what I said earlier, that the iMac is a very powerful "side" machine? So, if you want to backup, you'll always have your server around (that's for computer savvy people). If you're a newbie, again, if you don't even know what's the purpose of backing up (most newbies don't), you don't really need it :) And when the need arrives, the SuperDrive will

be there to do the job.
As for the modem, I believe it'll be a 56K v90 instead of the announced 33.6K. Steve just included the slower one because he's not sure if he'll be able to ship v90 modems by August, and he didn't want to promise anything that he wouldn't be able to fulfill...

> tiger?

Because they make everything more expensive! Slots are expensive, SCSI is expensive. Macs never had a parallel port anyway :)
Another correction: the USB port is daisy-chainable, which means you can connect up to 127 devices on each port! So your point is irrelevant.

Again, Macs never had parallel ports! We had 2 serial ports all the way. It's not a proprietary printer port as you suggest, it's plain serial.
I don't understand... EPSON makes great and affordable printers, and you can hook them up to your PC just as easily as you can install it on your Mac. HP is about to do the same (at the moment they have 2 different product lines). I wouldn't say EPSON's current amount of choices is limited in any way. Plus, there's always CANON and a number of other vendors.

>

> much to ask?

EPSON stood by the Mac all the way, so you can count on them making an USB device too, same for CANNON (who used to supply Apple with its printers).
In the case of USB, I'd have to adopt a "wait and see" attitude, since I can only guess that manufacturers will make USB devices. Remember, though, that USB isn't a Mac-only standard, so, if Citizen, for instance, launches USB products, they're fully aware their audience won't be only of iMac users!

Heheh.. Read the above... The mouse is daisy-chained to the keyboard.

I stand by the iMac. I don't think it's flawed. And remember that the iMac is just one of Apple's machines. They have other, affordable G3 Macs...

> > I agree... I've got a G3/266, and it's _fast_, just about the

> An over $3000CDN G3 is NOT an option for me.

Well, I can't really comment on your Canadian dollar prices, since I'm not fully aware of the current exchange rates and the taxes going on between the US and Canada... But from what I understand, the iMac is not for you. That's why you think it's flawed. The iMac is not supposed to be the "be all end all" Mac. It's made for newbies, and you don't seem to be a newbie :) I'd recommend a G3/233, or even some of the discounted 8600/9600 machines, which offers solid performance and great engineering. YOu'll be able to use your Syquest (as long as it's SCSI), scanner and printer. I just don't know about your homemade HD :)

It is not a closed system, it's wildly expandable! You can increase both video and system memory, change processors without the need of any card, and hook up to 127 devices on it! The thing about is it that people are not familiar with USB yet, they don't know what it can do. As soon as you see loads of USB devices being announced, you'll comprehend why the iMac was done that way (to make it cheaper, no slots, no SCSI).
BTW, have you heard the recent announced of an USB->SCSI bridge announced by Newer Technologies? So I guess you're going to be able to hook up your SCSI stuff to the iMac afterall :P

No it's not. It _does_ include a fair deal of software, including Filemaker Pro v4.0, one of the best selling database software.

> b) that mac has to work against it's bloatware in OS and apps
> before it gets ANY work done.

Have you used a G3? It reminds me of a b/w ST in its screen redraw speed, only that I'm on 832x624xmillions of colours :)
So, your "bloatware" comments doesn't have any meaning, since you _can_ do a lot of things with the G3 iMac. Of course it's going to need more RAM than the ST, but then, we're talking a technological gap here of more than a couple of years!

No, your line is something the crude PC cloners would use to attack the iMac. Why do you newbies need a floppy if they have no idea what's its use? But of course, boneheaded PC cloners will say "oh, see, this PC has incredibly useful FLOPPY DRIVES, while the iMac doesn't, isn't that a MAJOR shortcoming"!
What they don't mention is that, with the PC, they'll have to keep screwing around with IRQs, DMA, and assorted 3-letter acronyms no one seems to have a complete grasp of, while with the iMac and its USB ports, it's all truly plug and play, just as it's been for Mac users all along...

First of all, I wouldn't buy a PC, for ANY price. And people are starting to feel like this, getting fed up with Microsoft and Windows. So, for them, those cheap PCs are just not a choice.
You're just spreading misinformation here. The iMac has 2 USB ports, that, by the time of its launch, will have more than a couple of peripherals available for it, and I'm willing to bet it's going to supersede the current parallel/serial port technology in less than a year.

>
> That sounds rather familiar, actually...
>
> ...sounds like the 80's again... so much for
> 'thunk different'...

I can't see how. The iMac if anything is a step in the right direction, since it's going to use industry standard devices, something unthinkable for Mac users in the 80s!

>

The thing about it is that it's actually going to mature, and you'll be forced to buy another cheap assed PC board to support all the USB devices you'll want to buy...

>
> > By the time the iMac hits the stores, you'll be able to buy HP USB

Well, since you can't buy the computer right now, it's no use buying a printer either. So, by the time the iMac gets out the door, you can be sure there'll be a couple of printers to choose from...

BTW, where did you find a complete PC system for $600? That sounds more like 486 pricing...
Fools are the ones that follows Gates, and you seem to be one of those. Shame on you.

YES IT IS.

X,Y, & Z IS useful. Then some discussion can
occur as to just how valuable the bundle is
in relation to it's apparent cost.

>

The big question is really what's the cost for that niftiness
to the user in terms of overhead when getting the little things
done just so they can have all that niftiness. Having to run
MacOS or Win95 trashes much of any modern machine's speed gain.

We atarians have a term for this: vapor.

Nevermind that that makes the rest of OfficeMax->BestBuy
inaccessable to them. The iMac is reminiscent of the ST
at this point this way.

>

But of course, boneheaded PC cloners will say "oh, see, this PC has incredibly useful FLOPPY DRIVES, while the iMac doesn't, isn't that a MAJOR shortcoming"!

It's ubiquitous mobile random access storage. It's crude.
However, for $25 it more than makes up it's cost.

> What they don't mention is that, with the PC, they'll have to keep screwing around with IRQs, DMA, and assorted 3-letter acronyms no one seems to have a complete grasp of, while with the iMac and its USB ports, it's all truly plug and play, just as it's been for Mac users all along...

Free Clue for the Day: Those skanky $600 PC's have had
USB ports for quite a while now. That's why the iMac
is nothing special. It's essentially one of those skank
PC's with all of the more standard ports removed AND
no SCSI to boot. (a $50 addition on the lowend)

Apple is being excessively cheap with this machine.

Apple has always had a rather strange idea
on what constitutes the low end even when
compared to cloners. The lowend consumer
is not going to compare Apple to Compaq.
Even if they do, Compaq will still win
out on apparent (and actual) cost as well
as being more modular.

(that apple couldn't actually 'innovate' on
that old design is another reason I think they're
terminally stuck in the 80's)

Microsoft != PC.

Be is in a much better position to capitalize on
their dissatisfaction as are the free unixen.

So does any cheap PC. However, if your 'visions' dont come
true in time, the purchaser of the clone wont be wondering
why he can't take advantage of most of what's in CompUSA
or OfficeMax.

USB != industry standard (yet).

That's the problem. They're being unecessarily
stingy with the actual defacto standards to the
detriment of their (over)paying customers.

I dunno, that Apple webpage said something about 'lowend'
users. Mebbe Apple should get to know that kinda user
before tring to mismarket to them.

Just what does Apple think it's saving by omitting a
$25 device? The least they could have done was include
a zip instead. It wouldn't have been standard but, at
least the user would have SOME form of mobile storage.

Yup, think ahead & don't presume the course of events
will unfold for you in the most ideal way imaginable.
Having older standard ports on the machine, one is
prepared for either outcome. That's why the $600
clone is better, IT HAS BOTH.

The buyer just doesn't get to snicker that they
payed 2x as much as they needed to for a straight
jacket.

You really should buy a clue from somewhere. You have to have
really OLD machine in terms of PC's NOT to have USB support.
I don't think you can even get a post-486 motherboard without
USB support anymore.

USB on motherboards is still 'yesterday'.

>
>>

Mebbe, mebbe not. However, the $600 PC doesn't have to
count on this round of craps. It can use all the printers
available NOW & need not depend on events in the future
unfolding ideally.

$100.

You've not yet really stated a good reason for
buying Macs to the exclusion of all else. Actually,
since you have such a strong bias in this area,
you really have no standing in this discussion.
Apple needs to expand it's userbase not merely
'preach to the choir'.

> BTW, where did you find a complete PC system for $600? That sounds more like 486 pricing...

Computer City & they were complete Pentium boxes.
The same store had 19" monitors for $500 as well.

> Fools are the ones that follows Gates, and you seem to be one of those. Shame on you.

Actually, I use Linux so I can get quite effective use out
of a 486. I don't follow Stevie because I really have never
had that much money to burn. That's how I came to be an
Atarian originally: power (and ease) without the price.

I went PC when Atari really started going downhill because
a comparably equipped Mac at that time was 4x more expensive
and out of my budget. Apple antagonizes many potential
customers with it's arrogance.

Hi all:

As much as I dislike the almost monopoly of Microsoft, as long as there are people who are willing and able (no government law saying you must use Microsoft) to vote with thier wallets for other products there will be a choice. I still use my STacy on a regular basis and on my wintel machine I am testing Opera and will probably delete both Netscape and IE3. The superior product wins in my opinion. As far as requiring IE4 with W98 don't buy it if you don't like it. If enough people refused to buy machines with W98 it would not take Microsoft long to change.

Yes, I recently visited this MagicPC/Mac site.
I seemed to me there are quiet a lot limitations which software can be run.
Those other developments : do you happen to have the URL's ? (if not I'll search for them).

1968. Umax Clone Deal Dead

Newsgroup: comp.sys.atari.advocacy
Date: 1998-05-24 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <356872ad.0@diana.idirect.com>
Source record: 5179

well, look what happened last week - as I predicted, Umax didn't last out the year making Mac clones, albeit not in the way I had predicted, although the actions of Apple and Steve Jobs did have an effect on the final outcome.

Needless to say, this is one accomplishment that TIFKAS won't be bragging about, or will attempt to use his usual "smoke and mirrors" to downplay, rather trying to once again convince us that a hotrodded Pippin with non-standard peripheral ports for vapourware peripherals and no floppy drive is going to be a big hit with the first-time computer buyer......

TAIWAN UMAX LOST MONEY ON APPLE CLONES

TAIPEI (Reuters) - Taiwan manufacturer Umax Data Systems said today it expected to have lost about T$1. 1 - 1 .2 billion making "clones" of Apple Computer's Macintosh and had all but stopped production.

"Almost everybody suffered losses from making computers for Apple"' Umax finacee manager Chang Jung-huei told Reuters.

Umax and its U.S. unit Umax Computer are the only manufacturers still licensed by Apple to design and make computers that run on the California giant's popular Mac oS operating system' which drives Apple's Macintosh machines.

Apple began licensing such cloning in 1994 to challenge the global dominance of the "Wintel" PC standard established by Microsoft and Intel. Apple reversed the decision in August 1997 after the return of founder and former chief executive Steve Jobs' who said the cloning poliey was a failure and hurt Apple's own sales.

Umax has pressed ahead under existing contracts but has said it would phase out Mac-clone production as unprofitable. "We reported a 1997 loss of about T$700 million from making Mac-compatible clones and we expect to report another T$400-500 million of loss this year"' Chang said by telephone.

Chang attributed the new losses mainly to cut-price sales aimed at reducing Umax's inventory of Mac clones.

end of document

PS - one thing - Umax does make some wonderful scanners, so they should recover nicely from their losses. Too bad you can't connect their scanners to an iMac.......

PSS - Milan (the TOS tower clone) has a launchdate of June 15th.
May not be the fastest computer on the market, but at $825 US, a large
shareware library and the ability to hook up standard peripherals and a
SCSI option, it leaves toys like the iMac in the dust......

Will it be available in Canada ?

If so - where ?

Will it run 'well behaved' Atari software ?

The Canadian Curmudgeon (in sunny, after the wet, Calgary)

1970. Milan, was Umax Clone Deal Dead

according to Thomas at Milan Gmbh, they ARE planning to have a
Canadian agent for their TOS clone as well as an American agent to be
announced shortly. It is designed to run "well-behaved" Atari
applications - think of it as an emminently affordable Hades.

You can check out its specs at http://www.milan-computer.de (it's
in German, but they're in the process of designing an English web page).

Sure looks that way. It's not over until July were last minute deals can be
had. But I don't think that will happen. Umax would need a compelling
product to undercut Apple's offerings.

Smoke and Mirrors? I never stated that UMAX license would be renewed just
that it's not July yet and that anything can happen.

If you are referring to the imac: the imac well be a big hit and I will go on
record in stating this. Having the inside knowlege at Comp's helps.

But you will. Umax does make nice scanners are the preferred ones in the
Apple store at Comps. You bet your behind that they will have a USB scanner
for the imac.

..

Yea sure...Does the Milan price include a monitor and software bundle? Most
likey a costly option.

The imac is sure on whicked fast toy...

for two months, when they sell them to the drooling Mac fanboys;
smarter people (including more pragmatic Mac users) will want standard
ports and floppy drives and avoid them like the plague. Expect to see
the iMac gathering cobwebs afterwards. Nobody is going to buy a $1200
machine with this much power just to surf the net unless one has deep
pockets. Have you read the Forbes article?

we'll hold you to that, TIFKAS, and relish it when you have to eat
your words.

until then, it will be vapourware. Let's see peripherals (and
plenty of them) before we make a commitment to buy. Not to mention a
standard floppy drive.....
>
>...

hey, by the time you add a standard SVGA monitor, standard CDROM and
SCSI card, you'll still be under the $1200 iMac. Software is plentiful
in the shareware sector, and there will be the necessary software to get
you started. And we get a floppy drive as standard. Nice try.

>Still Vice-Prez? What an accomplishment. I am sure your resume reflects that
>prestigious office to seek a real job besides the min. wage paper mill job..

yep, as a matter of fact I was re-elected last week to the position
- apparently the membership likes what I've been doing for the past
year, including presentations by developers and a major Internet
workshop. It's definitely been a lot of work, but we have gotten results
and I want to make the next year even better. There's still life in the
old dog yet. :) And besides, the president is doing a good enough job
that it's superflous to want to challenge him - why ruin a good thing? :)

And yes, I do have a real job - and I'm not a paper pusher. I work
in sales and web design for a hardware store in downtown Toronto, and
I'm making above minimum wage. It's just I'm very stingy with my
pennies and expect a lot from anything I buy. And the iMac, as nice as
it sounds speed and power wise, falls flat due to its non-standard

ports - my existing peripherals are doing an excellent job, and I see no reason to eat my investment on those.

Saying otherwise is an untruth - and no matter how many times you say it, it definitely does not make it true. Of course, your posts are beginning to read more and more like chapters from Mein Kampf :)

Hopefully you'll be looking for a new job soon yourself, after the iMac fails......perhaps as a pencil sharpener for Bill Gates? Nah, you'd only hurt yourself - besides, Bill only wants useful idiots around him.....

>-----== Posted via Deja News, The Leader in Internet Discussion ==-----
>http://www.dejanews.com/ Now offering spam-free web-based newsreading

you know, even after TIFKAS buys his iMac (with its "superior" Internet software), you'll be sure that he'll still be using DejaNews to post his trolls rather than setup a real newsreader :)

The paradox here is that Apple is slashing their reseller outlets again at a time when they're going to be trying to position the iMac as a consumer-oriented 'all-in-one' box in a few months. Unless they're targeting it for the education ('niche') channels and have no interest in selling it to home computer users in the market at large, further constrictions of the Apple product availability channels above and beyond the November reseller purges (which got rid of the worst offenders wrt lackluster dedication to selling Macs, ala OfficeMax, etc.), make little to no sense, IMO.

Not everyone has convenient access to a CompUSA or Fry's, IOW, and the first-time buyers who comprise a logical target audience for the iMac will typically hesitate to purchase direct or via the catalogs if there are no local sales or support outlets for the product, no matter what the product is or how 'insanely great' it is. The local sales outlet issue is changing as Web and direct-order purchases become more accepted, perhaps, but the issue of on-going support availability at local sites after the purchase remain. (See below)

The criteria for the decision to 'deauthorize' do not only include a VAR's performance and dedication. (How Apple can possibly know who's dedicated and who isn't at a distance like this is a mystery to me -- personally, I think many of the cuts will be blind, shot-in-the-dark type of deals because they _can't_ know this with any degree of certainty in all cases, esp. with smaller VARs in remote areas, so 'dedication' will simply equal 'sales volume', a.k.a. 'profits for Apple', which is the only thing they _can_ measure at a distance; so smaller VARs will likely be screwed, regardless of the quality of service they provide, etc....). The criteria

also include "the potential of the reseller's market and metropolitan area", which would mean that the Mac market itself in certain geographical areas will become 'deauthorized', leaving existing users stranded without local sales or support and new users without any opportunity to see and 'test drive' what they're about to buy (unless there happens to be a CompUSA in the neighborhood....).

See http://www.zdii.com/industry_list.asp?mode=news&doc_id=ZD318330 on these details of the decision.

-- For some reason, the original 'MacWeek' story headline now takes you to a report on Apple's 10-Q statement, not to the report on these changes in the reseller channels, etc. (Either that or Cyberdog has finally gone senile and isn't loading the proper link when I click on it.... <g>)

The other part of the news item has not received much attention in these threads, so I'll mention it here (with rant to follow.....), namely Apple's announcement that they are eliminating over 50% of their 'authorized service' providers in addition to the 30% cut in their authorized VAR/reseller program, above and beyond the resellers who were already cut in November.

For many of us existing users, the cuts in the reseller channels will be grim, but bearable. -- If it ever came down to that, we could all still buy Macs and components at the Apple Store, even if no other sales outlets remained.

The repair and tech support infrastructure, OTOH, _must_ continue to be provided locally, with as wide a geographic distribution as possible. For people (such as me) who are too clueless to know how to open the case, much less replace components, having 'Apple certified technicians' in the area will pretty much make or break any future purchasing decisions. And I suspect that for a majority of 'non-savvy' Mac users, as well as businesses using Macs who do not have on-site support staff, that this is a primary consideration as well. -- The only people unaffected by this are power users who are able to just buy the components and do all their own repairs themselves. Though overrepresented on Usenet, such 'technically savvy' users do not represent the majority on any platform, needless to say (well, except for UNIX, perhaps....
<g>).

The other issue is this: the decision essentially breaks the promise of 'AppleCare', that no matter where you buy a Mac (within reason), you will be able to get authorized on-site or carry-in service for a fee (a truly exorbitant fee, but it provides peace of mind to many, no doubt). Holders of existing AppleCare contracts (basically extended warranties from Apple), who now find that they will need to catch a plane to LA or Chicago in order to reach 'the nearest Apple certified technician' for warranty repairs, etc., will _not_ be pleased at these announcements.

Not to sound too apocalyptic here or anything, but Apple could very well be looking at a class-action lawsuit for breach of promise to AppleCare

customers if this happens, since the whole point of AppleCare is the availability and convenience of on-site or carry-in service (vs. having to pack everything up, ship it to Cupertino and wait for weeks/months for repairs, without the use of a computer....). -- Eliminate the local 'Apple certified technician(s)', and you also eliminate that promise and service to AppleCare customers in the region(s) supported by the technician(s) who got the ax..... (According to the URL, the number of service sites plummeted from 8,000 to 3,500 nationwide, so the number of customers affected by this is not trivial, at all....)

This move also significantly impairs Apple's ability to compete against PC vendors and VARs, IMO, all of whom offer 3-5-year on-site support and yadda-yadda-yadda, at a _much_ lower cost to the customer than AppleCare, even as it now stands..... (And please, spare me the line that 'Macs don't need no steenkin' on-site service warranties'; they're damned good computers, but hardly invincible or immune to hardware failures over time....)

Will it really come as any surprise if Mac customers in these 'deauthorized' regions simply say 'Screw you, Apple!', and move their business to PCs?.... I mean, does Apple honestly expect them to remain 'loyal Mac customers' after such a massive withdrawal of local VAR and repair/tech support like this? Do they actually expect new customers to be attracted by the proposition, 'here's your insanely great new Mac via Web order, but as for any local or on-site support, well, you're on your own now unless you move to New York or California'?.... Freelance Mac consultants will no doubt make a killing and swoop in to fill the void in many cases, but the impact to Apple's installed user base in these 'unsupported' areas is going to be pretty much of a complete disaster, as I see it.

IOW, 30-50% cuts like these are not simply 'trimming out the dead wood'; they are reducing the tree to a stump with only a few isolated branches left.

People can spin all they wish about how it will be a 'lean and mean' stump, and a stump 'rededicated to Apple's core markets', but it remains a stump, nonetheless; and it's not a pretty sight, IMNSHO.

I had to get it off my chest. I just came back from a trip to San Diego. A fairly large city, even by Iowa's standards <sic>. I blew about $400.00 at Fry's electronics on a bunch of junk, tried to understand what the hell all the PC boards laying about were, and took a gander at the Mac selection. They actually did have a few Mac's up and running (I'd guess about 3% of the display was Mac). It was funny to watch all the customers jumping from Dell to IBM to Compaq. Besides myself (and I was very careful about how close I stood to the G3's) there was one other person actually looking at the Mac line up, and it was some notebook model at that. What was really funny however, was the single aisle that had what apeared to be Mac hardware and software. They had "special" Mac modems for $50.00 more than the PC counterpart. $120.00 Apple keyboards. The list went on (at least as long as the single sided aisle could hold). If you have never been to a Fry's, it might be kind of hard to understand the humor. There must be thirty aisles twelve feet high stacked with PC hardware. It's sad, because I really do like my Mac, but it's funny after listining to sinfart go on about how well the Mac is supported throughout the United States, and the bargin they represent.

CompUSA is worse. They may have a slightly higher percentage of machines on the floor, but they are hidden in the back. I almost got the feeling the lights were dimmer back there....Sure the machines were there, but not a soul in the store is checking them out. I mean, who, besides an Atari user can understand why a keyboard cost $120.00 instead of $19.95? Surely not 99% of the customers in that store...

Does anyone remember Federated? Remember when you walked in and looked for the Atari stock? You got to see maybe a 1040ST playing the dancing raisins next to an Amiga 500 doing pretty much the same. That is what the Mac display and single Umax display reminded me of. Except now, the PC's are not just sitting there with a blinking cursor...

I'm happy with my $300.00 50Mhz Quadra 800. I just added another 64mb of RAM, added a Yamaha 4260 CD Recorder and a 24X SCSI CD ROM. I like it almost as much as my Afterburner/Falcon setup. But I can wait for the G3's to fall in the market. Even at $1000.00 for the inexpensive one, there just isn't enough included to justify the expense.
And really, just take a trip to one of these outlets and see for yourself. The first time users, and old hats alike are not jumping on the new Mac line.
SinCrap can spew all the numbers and mindless quotes he wishes. It dosen't change the fact of what the masses are purchasing.

He is like a boy who still believes his girl still is in love with him
as he watches her walk hand in hand with another.

Whatever.
Why.
ROTFLMAO.

<much of an interesting report on what's REALLY going on in Mac
superstore dealers snipped>

thanks, Mike, for going into the stores and reporting on this. It
seems that TIFKAS (The Idiot Forever Known As Sinclap) seems to be
in a bit of a tight spot, now that his claims of CompUSA marketing
superiority have been outed as just more wind. I've been going on
newsgroups and web sites and finding similar complaints from CompUSA
shoppers about the shoddy service and bad marketing of the Macs. A
shame there, really - and now Apple wants to cut back on their dealers
even more and leave sales to Frys and CompUSA? They should take a page
from the local ComputerCity in Toronto, which has a section dedicated
to the Mac in a well-lit area, with Macs ready to go and operational,
as well as the remaining Mac dealers in Toronto, who know how to
present and demonstrate their product

I guess this also puts paid to the claim TIFKAS makes that CompUSA
has enough Mac software to make "12 30-foot piles". Makes me wonder if
TIFKAS is employed by CompUSA, but as the janitor rather than trusting
him in any sales position, much less the head of a "crack sales team".

>the new Mac line.

What with both of us having been involved with the Mac in some way
over the years, and both of us being very impressed with it, it's
obvious that this is not an attack on Apple the computer but Apple the
Company for allowing the rot to set in as bad as it has. Jobs should
get out of the office every once in a while and go into the streets to
find out what the users REALLY want.

>SinCrap can spew all the numbers and mindless quotes he wishes. It
>dosen't change the fact of what the masses are purchasing.

You should of been to the Fry's store in Sunnyvale. In the store is their
first Apple store with in a store which is a test model. I hear very
successful. If the San Diego Fry's Mac section is the pits, than Mac shoppers
are at other stores like CompUSA's and Apple mom/pop dealers. There is alot
of places for Mac shoppers to go in Southern California.

Here in Texas, the Fry's store in Garland is doing fantastic Mac sales which
accounts for about 20% of the Computer display area. Yes Virginia, there is
mountains of Mac software and accessories.

Nice try..

If your not happy with Apple's keyboard pricing than there are third party
ones for less than $40.. Nice try..

These are CompUSA and Apple public numbers. Apple CPU sales currently account for 15% of CompUSA's total CPU sales. This is up from 3% in October 1997.

Putting words in my mouth again...Using the Limbaugh tatics I see. I never
claimed of CompUSA's marketing superiority.
I can go on Wintel newsgroups and web sites and find complaints from CompUSA,
Sears, OfficeMax, Computer City, Circuit City, Fry's and Radio Shack.

Whats your point? This is a low margin/high volume business. If you want
your hand held, goto the mom/pop dealers and MicroCenter. Expect to pay a
little more for the service.

Most people don't and expect service for free.

As for Computer City...the situation is different in the mother country.
Computer City was not willing to support Apple like CompUSA did. So Apple got
out of Computer City, Sears, OfficeMax, Circuit City and Best Buy due for the
same reasons. CompUSA will be the only nationwide retailer carring the imac.
Plus there are the strong regionals such as Fry's, MicroCenter, ComputerTown,
ComputerWare and plus the thousands mom/pop and VAR's..

> I guess this also puts paid to the claim TIFKAS makes that CompUSA

As I recalled it was Best Buy..

I am not employed by CompUSA.

I think Jobs knows his business than you ever will. What he has accomplished
in ten months has been out standing. Even I had doubts about him early on.
Thats been erased.

Apple has increased their sales from Q2 over Q1 with out those retailers
because of what CompUSA has done according published info by CompUSA and
Apple. Plus realized savings from not supporting those retailers currently.

A fine post by Mr. Brewster and Dave Nagle deleted.

The simple point is Apple is saying adios to the dead wood that is costing them money(losing money) and supporting the ones who are loyal to Apple like CompUSA, Fry's, MicroCenter, ComputerWare, Computertown plus thousands of mom/pops and VARS.
The majority of these firms will be opening up additional stores this year and next. Apple is doing this to save money(increase margins) and use the money to support the ones that matter.

Look at Compaq. Currently Compaq has a 90 day supply of unsold inventory(which about wiped out their profit last quarter) and is way over extended in the channel in their pursuit of chasing(buying)at all cost marketshare. Apple tried that once and almost sent the company out of business with two billion in unsold inventory that know one wanted unless at a drastic discount(yea, I took advantage of Apple's misfortune and got a spanking new Performa 6200 for $899).

Apple's plan for marketshare is to keep a 4-5 week supply according to published reports and to develop compelling products that the market wants(instead of shoving down overpriced crippled P6200s in ones throat that know one wanted at a 2000+ price). And with retailers that are willing to support Apple on how they sell and market Macs, Apple will do wonders with the current G3, PowerBook G3's and the imac.

Hi Stephen,

Your point is valid, however, MS will still win by default. It is
just easier for people to go with what is most available, no matter
what its relative merits are. Consider an electric utility. Now
people might hear lots of horror stories about safety violations at
the plants run by their local utility, or of its discharge of
pollutants into their waterways & atmosphere and periodic grid
failures. Even with all that, how many people would seriously look
into alternative energy sources when all they have to do is make one
telephone call to have electricity provided to them?

Terry

Well behaved programs. I guess that eliminates 90%.

Well I be able to buy this fine TOS clone at CompUSA and Fry's?

1984. shock, horror! Wozniak Outs Jobs as Mac-hater!

Newsgroup: comp.sys.atari.advocacy
Date: 1998-05-27 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <356c0648.0@diana.idirect.com>
Source record: 5195

here's an interesting summary of an article that's running in a
current Macintosh magazine that's an interview with Steve Wozniak (the
other Apple founder) that sounds like I'll have to go to the newstand
and get, as it has some eye-opening and surprising revelations from
him. I found it in comp.sys.mac.advocacy, which TIFKAS recently claimed
I don't frequent - nice try, but no donut.

From: jayfar@netaxs.com (Jayfar)
Newsgroups: comp.sys.mac.advocacy
Subject: Woz Interview in May MacTech
Date: Tue, 26 May 1998 21:11:20 -0400
Organization: Jayfar's Original Virtual Macintosh
Lines: 35
Message-ID: <jayfar-2605982111210001@downtown1-3.slip.netaxs.com>

A 4 or 5 page interview with Steve Wozniak appears in the May '98 issue of
MacTech magazine (in bookstores now). It's not available in MacTech's
online article archive, as that runs at least several months behind their
print edition.

I won't try to summarize it at length; I only read through it once quickly
at the bookstore. Woz does offer some strong criticisms of Steve Jobs'
Apple:

Comments that Jobs never uses a Mac because he thinks it's crappy (Woz
still prefers using Macs).

* Says it's hard to view Jobs as a hero for his current Apple role, and
cites Jobs sale, last year, of his Apple stock and his not being
forthcoming about it.

* Questions the breadth and depth of Apple's commitment to education.

* Laments the loss of clones and Apple's failure to pursue licensing earlier.

* Asks whether Jobs is saving Apple, "or is he saving NeXT?"

* Mentions the lack of Mac drivers for a lot of "interesting new hardware."

About the most interesting dialog with Woz I've seen in a long while.

Cheers,
Jayfar

The numbers speak for themselves. After June 26, over 3500 VARS will sell
G3's in North America. According to published reports by Apple and CompUSA,
Mac cpu sales account for 15% up from 3% in Oct/97.. Not bad..

Your bullshit is in your dreams.

>So you have seen one? Or just spouting off the claims of a TOS clone Jihad...

1) have YOU seen a Milan? Obviously not - but that obviously
doesn't stop you from posting more of your MCIBTYC drivel. MY info
comes from the newsgroups, their web page and from first-hand reports.

2) I have told you I dislike the term "Jihad" when describing Atari
users - you are obviously doing this to try to have your infantile fun.
Go take your Ritalin.

>
>>
>> >

>dumpster as the Direct line(Hades) did. Are they still in business.

1) Hades is still available and still made, and still has
enthusiastic users within the Atari community. Milan has shown a lot of
interest from the Atari community for the makers to continue with
further development, including a possible PowerPC model.

2) judging by what I've been reading on the net, CompUSA and Frys
haven't been doing too good in marketing the Mac, with many complaints
about service and displays. Even CompUSA admits they have problems and
are at least taking action to correct this.

3) the only thing that belongs "in the dumpster' is your immature
and spoiled-brat attitude towards other operating systems and their
users and your tactics in dealing with them. Maybe if you unbury your
head from your buttocks maybe you can see and hear better. Go eat your
Pablum.

you certainly relish in spreading the bull all over the net,
including your last missive to try to smear me (which failed,
incidentally) in a chartered newsgroup like comp.sys.atari.st, which
violates section 2.9 of your Earthlink account. Which, by the way, IS
their buzzwhack, as is Dejanews' .....

USB ports are on the PC now as well.

The problem I forsee with USB is that it will clutter the desktop. Want a bigger hard drive? USB. Want a cartridge drive (tape, removable hard disk)? USB. Faster modem? USB. You'll need a bigger desktop just to hold it all, while all my PC hardware (save for my modem and EPROM burner) fits nicely into the case).

Geoff!

No, you speak for the numbers. And Deja news speaks for you.
The numbers could easily be explained by a major purchase from an
educational facility, or home for old folks.....
The fact of the matter is that a raise from 3% to 15% dosen't show a
large volume increase. Those numbers could represent sales going from
3 Apple computers sold during a period to 12 sold throught the
following period.

Nice try...

Let me say this s l o w l y a g a i n in English. Apple is 15% of
CompUSA's total CPU business share currently.. This upswing in share from 3%
is significant in terms of unit sales and revenues.

Why did so many St users upgrade (downgrade?) to Wintel? Surely the Mac was the logial replacement. I mean GEM is a complete rip off of the MacOS finder. Digital Research were forced by Apple to "Alter" (wreck) the PC version of GEm due to the similarities.

TOS is still a good OS and GEM could easily be improved to bring it up to todays standards, but w/ no Atari the ST seems to be a bit buggered.

I'm curious why so many Amiga users moved to Mac, but ST users didn't (here in Ireland that's been my experience anyway).

Anyway, there still is room for TOS, the Amiga and Acorn are still around, aren't they? Plus BeOS and Linux seem popular to me. Bill Gates doesn't own the world yet.

Jason. (An ex ST owning Mac user)

A port to PPC for an TOS compatible OS is a very good idea. It may not produce many new "ST"s but as a complimentary or replacement for MacOS, a new version of TOS would be great.

I disagree about an Intel port. Intel chips are CIS and getting a little out of date, no matter how much they are sped up, and besides, this would limit direct CPU accessing in software. Stick w/ Motorola - they did the ST (and Mac, and Amiga) proud.

Any time someone keeps pointing out MS's "monopoly", I like to point out that *many* companies in this industry have been accused of the same thing in the past. Just look at IBM in the 70's...when other companies took IBM to court for monopolizing corporate markets with their mainframes. Look at IBM now.

In the early 80's, Lotus was accused of monopolizing the office suites because 1-2-3 was the dominant software for small offices. Wordstar was also the popular word processor. Soon, Wordperfect took over from Wordstar...who runs Wordstar anymore? Even wordperfect is nowhere near as popular as MS word now.

All these changes occurred WITHOUT government regulation. As soon as MS stops satisfying its customer, they will go the same way and our desktops will follow.

It still frightens the current crop of WinWeenies.
They never quite grasp the fact that Microsoft was
the LAST, DEAD LAST major (or even minor for that
matter) to deliver a GUI to it's loyal end users.

Atari ST: GUI for the impatient and underfunded.

2005. June 17th TAF Meeting - ExtenDOS Gold and more!

Newsgroup: comp.sys.atari.advocacy
Date: 1998-06-02 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <35748faa.0@diana.idirect.com>
Source record: 5116

Agenda for the June 17th Toronto Atari Federation meeting:

well, before we go off for our summer hiatus, we want it to go off with a BANG! And what better way than with a club exclusive!

For tonight is when we host Roger Burrows of Anodyne Software, the man responsible for developing the first practical driver for utilizing CD-ROM drives for Ataris, ExtenDOS. And at this meeting, Roger will be unveiling two of his new products: ExtenDOS Gold, the logical upgrade to ExtenDOS and ExtenDOS Pro which supports more drives than before as well as adds some new features, and CD-Writer, a practical and low-cost application for buring your own audio CDs using a CD-ROM read/write drive. He'll also be offering upgrades for existing ExtenDOS users at the meeting.

As anyone can tell you, having a CD-ROM unit attached to your Atari adds an added dimension of having lots of media, text, and software archives with miminal storage space required. If you haven't yet hooked up a CD-ROM unit to your computer, or have ever been curious on what a CD-ROM can do for you, by all means come to this meeting.

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

2006. TAF MonSTEr Flea Market July 11th

Newsgroup: comp.sys.atari.advocacy
Date: 1998-06-02 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <35748f9d.0@diana.idirect.com>
Source record: 5117

SATURDAY, JULY 11TH, 1998 is the date for the Toronto Atari Federation FLEA MARKET! The doors open to the public at 1:00 PM and will remain open until 5:00 PM.

This may be your 'last chance' to come to a bazaar of Atari related pre-owned hardware and software where you may find that peripheral, application or utility for your ST/Mega/TT/Falcon 16/32-bit computer system or your XL/XE 8-bit classic computer system.

Not only is this an opportunity to buy or sell hardware and software for TAF members and other Atarians, this will also be an event whereby you can learn what you can still do with an Atari, including the Internet, Desktop Publishing, Scanning OCR, MIDI, and much, much, more! There is a confirmed Internet Demo (using the suite of available Internet prgs. running under STiNG), Howard Carson of MGI mentioned that he would be showing Calamus SL-98, and Martin Nueland will do a MIDI demo.

If you have original software or hardware that you no longer have any use for, get yourself a half-table and try to sell it! Or find that treasure that you have always wanted. Great deals should be in abundance.

We are anticipating a good turnout and hoping to have some dealers at this event and thus TAF has booked a larger hall to accomadate everyone. To help defray some of TAF's costs of the event, the following will apply:

Half-Table's will be $5.00 or the Full-Table for $10.00 each. Half-Table's are FREE to TAF MEMBERS. Admision is $2.00 per non-member family but if you are selling and have taken a half-table or more, admission is included. Admission for TAF members is, of course, Free.

The Flea Market will run from 1:00 PM to 5:00 PM, with setup commencing for sellors after 12:00 PM, noon, and teardown after 5:00 PM. This should allow enough time for as many people inside and outside Toronto to attend the event.

As usual, piracy cannot and will not be condoned. You must be selling original pre-owned software only. If anyone is caught selling pirated software or stolen hardware, they will be dealt with severely!!

The TORONTO ATARI FEDERATION Flea Market will be held in the "Gold Room" of the North York Memorial Community Hall on the Lower or Concourse Level of the North York City Centre Library Building at 5110 Yonge Street (next to Mel Lastman Square) at Parkhome Ave. Parkhome is 5 stoplights North of Hwy 401 running East off of Yonge.

Parking garage inside the complex - enter next to the Novotel Hotel on Parkhome Ave. Those comming by public transport can take the TTC's Yonge Subway, North to the North York City Centre Station, then walk through the tunnel into the concourse, down to the food court, turn left and find the Memorial Hall on your right.

Saturday, July 11, 1998, 1pm - 5pm for the TAF "Flea Market. To contact TAF on booking a table or tables:

Yes, but the basic problem with this is that 1-2-3, WordStar and Word Perfect did not come preinstalled on your computer. People had to compare the merits of competing spreadsheets, data bases, word processors and so forth.

It's not simply a matter of MicroSoft Word being more popular than Word Perfect. It's the dumbing-down of the whole process. In exchange for a little convenience - in not having to think, to spend money, and to spend time time in receiving and installing the software the vast majority of new computer owners are now akin to sheep. Sure, you can say that Windows/Excel/Word are more popular than competing products, because in the number of people that own these products they are. But, if I ran a chain of restaurants and gave out free cans of Royal Crown soda with every meal (in fact, put a free can in front of them period, whether they wanted it or not), but required people to go to the convenience store and pay for a Pepsi, Coke or some other brand/flavor of soda, would that mean that Royal Crown was really the most popular soda?

>
>All these changes occurred WITHOUT government regulation. As soon as MS
>stops satisfying its customer, they will go the same way and our desktops

MS doesn't "satisfy" its customers. It smothers the market in software that the consumer perceives to be "free" and then hopes that said consumers will be compliant enough to not want to buy a different product since they already have an MS product on their hard disk. Why spend additional money for something you already have? Besides, you've got to save your money to pay for all of those MS upgrades. If that doesn't work, MS just buys the competitor that looks like it might eventually cause some problems - or announces vaporware that

they have no intention of producing, that claims to outdo the (potentially) competitive product, in hopes that people will put off buying the competing product long enough for the company to go belly-up.

Ah yes - the great WITHOUT government regulation clause. The Robber Barons of years past certainly did pick a bad time, if they'd waited a while longer they'd be operating in todays environment, and able to suck the populous dry while people were complaining about that big bad horror, "government intervention".

Well, maybe a bit negative, but I don't think we should all sit here
waiting for the "saviour" in the form of the Phenix or the Wizztronics
computer or a future PPC clone.

We should all use and enjoy our computers with the technology we have
now, but I don't think we can't set our hopes up too high for future
machines. Let's just be realistic

Oh, how I wish I never entered this discussion.

BTW, shouldn't this thread move to the advocacy groups ?

Cheers,
Nick

>using Wintel?
>

I can't speak for "everyone" but I am using AOL because my only local ISP does
not carry the Atari newsgroupes, I do have a wintel box that I bought to run
certian programs that are not available for my Atari. I believe that most
people that use wintel do so under the mistaken belief that they are the best,
and are too lazy or busy to check out the other options.

Like I said above. You are speaking for the numbers. Nobody mailed me
a report, nor did anyone hand out a flier when I entered the store.
They either must feel I don't give a shit, or the numbers must be
false. If they were so important, why wouldn't they insure I am aware
of these important fact with the same methods that you choose to use?
Umm, maybe they are respectible people.........

Nice try.

If you need no point (such as in life, or reason for being here) then
why should I? I think the statement in itself says enough. After
following your post here for quite some time, I can honestly say that
realize that you might have a problem understanding the facts.

Well you need to call up CompUSA's investor relations or goto macsurfer.com to
look for the articles on this factual info. Duh!

I had this very same problem. I solved it by getting a new case because the ribbon cable and centronics connectors were all screwed up. It fixed the problem.

Why would I want to do that? I have no interest in CompUSA or Apple as
business.
The only reason I am even remotely aware of any of these issues is
because
of your unwelcome post in this newsgroup.
Besides, just because CompUSA or Apple have an information site on
ANYTHING dosen't make it so. I can still find web pages stating "All
new Apple clones to be manufactured". That is definetly
misinformation (not to mention to be the joke of the century:).
If CompUSA advertises Sony disk based digital cameras for $899.00 and
I can purchase the exact same camera for $669.00 from a mail order
catalog, where the fuck do you think I will purchase the camera from?
Considering the over-inflated prices of Apple products, I can only
image that I will be paying another 30 to 40 percent over mailorder
prices with any Apple product product purchased from CompUSA.
The Sony camera price is a fact. Go to work and check your pricing,
then pick up a PC Zone and see what it is offered for there.

Nice try...

Small nit: The Atari OS is called "TOS" - The Operating System.

"STOS" was a BASIC programming language used to create games on the ST.
STOS also suffered from one of the worst afflictions known to mankind -
it was line-numbered.

> >NextSTEP : Garbage - "You look so fine"

Source record: 5133

****
* PHENIX 040&#65533; Workstation *
* FIXED FEATURES V.1.0 <-- YEAH !! *
****

&#65533; MAY 1998, CENTEK

This computer is NOT a TOS clone or a PC compatible !
It is a NEW computer including NEW HARDWARE and NEW OPERATING SYSTEM named DOLMEN&#65533;.
A software EMULATION support into the system allows to run softwares from the old operating system named TOS&#65533;.

- MOTOROLA&#65533; MC68040&#65533; at 40 MHz (BCLK).
NOTE : The 040 instruction execution units are CLOCKED by the BCLK and NOT the PCLK (80 MHz) - See Section 10 page 10-4 of the MC68040&#65533; DATABOOK (M68040UM/AD Rev.1) and our technical files on this site !
By example : - Afterburner&#65533; is a 040 at 32 MHz !
- Hades&#65533; 040 is a 040 at 32 MHz !
- Milan&#65533; 040 is a 040 at 25 or 33 MHz.
People who present the 040 as a x2 (i.e 64 MHz) clocked processor are liars !!!
CENTEK refuses to use the same 'commercial' politic !

- Can be updated with a 060 at 80 MHz (BUS at 40 MHz).

- BUS : 32-Bit DATA / 32-Bit ADDRESS / 40 MHz Frequency.

- Three SIMM sockets : 32-Bit RAM up to 192 MB.

- MOTOROLA DSP 56301&#65533; at 80 MHz (80 MIPS !).
- 24-Bit HOST port with 3 clock cycles access :
80 MB/s DMA transfert (or 26 MWords (DSP 24-Bit words).
- On-Chip Memories : - 2048 * 24-Bit X Data RAM.
- 2048 * 24-Bit Y Data RAM.
- 3072 * 24-Bit Program RAM.
- 1024 * 24-Bit Instruction CACHE.
- 192 * 24-Bit Bootstrap ROM.
- Off-Chip Memories : 384 kB 15ns SRAM (=128 kWords 24-Bit).
- External DSP connector (Falcon signal upward compatible).
- HD SUB-D 44 pins.

- MOTOROLA MC68360 - QUICC&#65533; at 40 MHz.
(QUICC&#65533; : QUad Integrated Communications Controller).

- CPU 32 Core (68030) - 7.2 MIPS at 40 MHz.
- 32-Bit DATA and ADDRESS lines.
- Four General-Purpose 16-Bit Timers.
- Sixteen 16-Bit software Timers.
- Two Independent DMA (IDMA) with Single Address Mode
(up to 80 MB/s at 40 MHz per DMA channel).
- Communications RISC Processor (35 MIPS @ 40 MHz) with 14 DMA
channels :
- Ethernet/IEEE 802.3 Optional (Full 10-Mbps Support).
- A motherboard slot is dedicated for this option.
- 32-Bit DMA transfert.
- RS-422/GeoPort up to 4 Mbit/s full duplex.
- Mini-DIN 9 connector.
- LocalTalk and AppleTalk backwardly compatible.
- 6 kV ESD protection.
- 32-Bit DMA transfert.
- RS-232 up to 1 Mbit/s.
- Standart SUB-D9 conector.
- 15 kV ESD protection (European standart).
- 32-Bit DMA transfert.
- Full CENTRONICS IEEE 1284 parallel port.
- Up to 4 Mbit/s half duplex.
- 32-Bit DMA transfert.
- TWO MIDI (In/Out/Thru) channel.
- DIN-5 standart connectors.
- 32-Bit DMA transfert.
- One SPI channel.
- The 3 pins are on the DSP connector.
- 32-Bit DMA transfert.

- THREE 8-Bit ADC channels for external DATA acquisition.
- The pins are on the DSP connector.

- PCI controller : - MASTER and SLAVE.
- Two DMA channels (up to 132 MB/s).
- PCI 2.1 compliant.
- Support of the PCI 3.3v signaling.
- Support of the I2O new PCI messaging.
- Two PCI slots.

- USB controller for 2 HOST USB connectors :
- 32-Bit DMA transfert.
- one is used by the keyboard.
- the second is available for all the USB peripherals...

- 128 kB FLASH Eprom containing the BIOS (SET UP/AUTOTEST/BOOT).
The FLASH enables the software updates.

- ULTRA-SCSI bus (SCSI Controller with 16-Bit DMA) :
- The SCSI bus maximum rate is 20 MB/s.
- The HOST DMA maximum rate is 40 MB/s.

- VIDEO : S3 VIRGE DX with 4 MB of EDO RAM.
- This card occupies one of the two PCI slots.

- SOUND : You can choose a card between :
- Stereo 16-Bit 33/44.1/48 kHz :
- 2 CINCH Inputs / 2 CINCH Outputs
- 1 Mini-Jack for a microphone.
- 1 PC compatible GAME port
&
- Professional 24-Bit 48/96 kHz Card including :
- 8 INPUTs / 8 OUTPUTs, SPDIF®/AES®/EBU® Interface.
- 2 others MIDI channels

- VOCAL : TI® Speech Processor for the
Speech Recognition, Speech & Music Synthesis,
Access Control, and Software ONLINE HELP !
** This feature will be fixed later **

- TIME : Timekeeping® module with 242 bytes of NVRAM (Non Volatile
Ram) with RESUME mode to Wake up the PHENIX®.

- SLOTS : - Two PCI slots (one is used by the Graphic card).
- One DIRECT 040 Processor slot for Hardware expansions :
- others CPU (040/060) card.
- PowerPC® card (to mute the softwares to .....)
- others DSP 56301 card.
- VME® bus.
- Memory adding card (up to 256 new MB).
- One AUDIO slots (it is used by the Audio card).

- KEYBOARD : USB Keyboard !!
- This one may be a KEYTRONICS® Natural® keyboard.

- MOUSE : PS/2 mouse.
- it is connected to the USB® keyboard.

- CASE : Standard Middle ATX 2.0 Tower.
and CENTEK desktop case...later.

- POWER : ATX 2.0 compatible.

- OPERATING SYSTEM : DOLMEN®
- Multi-tasking
- 100 % 040 ASM code !
- AES & VDI backwardly compatible.
- The VDI uses all the 2D/3D S3 VIRGE® functions.
- Easy to update by the Flash and the HD.

****
* FINAL USERS INFORMATIONS *
****

-> The PHENIX complete configuration includes
- MOTOROLA 040 CPU (may be updated to 060)

- LS120 Drive (120 MB disks & floppy 1.44 MB compatible)
- 16 MB 32-Bit RAM.
- S3 VIRGE DX 4MB 3D Graphic card
- One 16-Bit Audio card.
- 3.2 Go ULTRA SCSI Hard Drive.
- 24x IDE CD-ROM Drive.
- USB 105 touchs NATURAL® Keyboard.
- PS/2 mouse.
- ATX Middle Tower.

PRICE : 9990 FF (French VAT included).
1380 USD (no local taxes included).

OPTIONS :
- MULTISYNC 17' 0.26 pitch monitor : + 2690 FF
- DVD-ROM® drive : + 1700 FF

-> MOTHERBOARD ALONE (with the 040) : 4990 FF
690 USD

****
* HARDWARE & SOFTWARE DEVELOPERS INFORMATIONS *
****

COMPLETE configuration : 6490 FF TTC (including French VAT).
MOTHERBOARD ALONE (with 040) : 3290 FF TTC.

These configurations include :
- CD-ROM (AND PAPER) complete Documentation (Software and Hardware
(slots)) and SYSTEM HOTLINE (Phone/E-mail) for the developers !
- CD-ROM with the developer package :
- CENTinel® The ultimate 040/060/DSP56301/68360 debugger.
- CENTasm® The 040/060/DSP56301 assembler.
- CENTedit® The universal color editor.
- FASHION® The RSC builder for DOLMEN.
- GNUC++ 040 pack.
- and the other things some developers will bring.

****
You'd like to become a PHENIX DEVELOPER ?
You will need a CONFIDENTIAL agreement !
Please contact us by e-mail to be registered and receive further
informations !
We need you to support the PHENIX !
The list of the official developers will be given nextly
****

We know you are hundreds people waiting for the availability of
this dreaming NEW computer. This last will not be available before
the quarter 4 of 1998.

WE MAY PRESENT THE FIRST PHENIX MOTHERBOARD AT THE
NEUSS - 2 & 3 OCTOBER 98

If you want to be automatically informed, please
register you in our mail-list.

Yeah?

Seems to me that this would print "Hello, world" over and over again
20 PRINT "Hello, world!"
10 GOTO 20

while this should print "Hello, world!" once.
10 GOTO 20
20 PRINT "Hello, world!"

I'm obviously no BASIC programmer; I don't even know whether the PRINT statement
is the equivalent of
printf ("%s", "Hello, world!");
or printf ("%s\n", "Hello, world!");

The latter. To suppress the newline, you would do a

PRINT "Hello, world!";

More fun: the equivalent of

printf ("%s\t", "Hello, world!");

would be

PRINT "Hello, world!",

Now, of course, if you're the sort of person to save keystrokes (and by
not using printf("Hello world!\n"); as your example, I guess you show that
you're not), you'd just use a question mark instead of the word PRINT.

In any case, you can string stuff together, so that this

? "Hello, ";name$;". Your bank balance:","$";balance

is this

printf ("Hello, %s. Your bank balance:\t$%f\n", name, balance);

Wait a second... Is Intel accused of these things by the FTC or by individual "liberal wacko" groups? Becuase if this has nothing to do with the FTC investigation then it has nothing to do with what Intel is formaly accused of. I just don't want to let FUDster's like Markowitz, Hughes, Field, or Elam to blurr the issue.

You _do_ realize, don't you, that these programs generally don't give
the rats enjoyable amounts of the substances involved. For instance,
when researching the effects of peanut butter, they don't feed them a
slice of toast with some peanut butter on it for breakfast - instead,
they feed them peanut butter, and _only_ peanut butter, for weeks
and/or months.

You need to have _some_ normal time to reflect back on your altered
states...

>PRINT "Hello, world!",

Don't you mean...

PRINT "Hello, world!",;

...? That's certainly what you'd need on BBC Basic.

Oh, yes, and to print extra newlines you use '. This can lead to
constructions like...

PRINT "Line 1 = ";x'"Line 2 = ";y',"Total = ";x+y;

>Now, of course, if you're the sort of person to save keystrokes (and by
>not using printf("Hello world!\n"); as your example, I guess you show that
>you're not), you'd just use a question mark instead of the word PRINT.

Yes, but that was ghastly. BBC Basic allowed abbreviation of tokens using
., so you could type:

```
10 R.
20 P. "Hello, world"
30 U. F.
```

Then, when you typed LIST (or L.) you'd get:

```
10 REPEAT
20 P. "Hello, world"
30 UNTIL FALSE
```

This was very cheap to do in the interpreter because of the way the Basic
code was tokenised into memory.

Ah... now, that was a *good* Basic dialect.

```
10 PROCfoo
20 END
30 :
```

```
40 DEF PROCfoo
50 LOCAL i
60 FOR i = 0 TO 10
70 PRINT "foo!"
80 NEXT
90 ENDPROC
```

You don't need to get your newsfeed from the local ISP.
My ISP actually uses one such newsfeed service (zippo)
instead of maintaining their own. You might want to check
into a (other ISP)+(zippo) combination. I've seen locals
as low as 10 bux (considerably cheaper than AOL).

It's obviously a user convenience; if you number every line in a QuickBASIC program (in sequence) that means you can assemble a pied deck quickly.

Of course, finding "an assembler that handles QuickBASIC code" is even harder than finding a puter that runs QuickBASIC and has a functioning card read/punch.

Don't you suppose that the reason you're allowed to number every line in a QuickBASIC program is so that (in theory at least) you can use that program you wrote in 2K BASIC for the SWTPC?

The program won't *work*, of course. BASIC is available on more computers than any other language, but each BASIC is a different nonportable language....

Source record: 5002

DE>Seems to me that this would print "Hello, world" over and over again
DE> 20 PRINT "Hello, world!"
DE> 10 GOTO 20

Well execution order by line number would suggest run line 10, jump to line 20 and run that, then stop.

DE>while this should print "Hello, world!" once.
DE> 10 GOTO 20
DE> 20 PRINT "Hello, world!"

Yep, just once, but the goto 20 is redundant. Most BASIC programmers weened themselves off GOTO's millenia ago. It was even easier when conditional loop-structures like WHILE...ENDWHILE were wisely added.

DE>I'm obviously no BASIC programmer; I don't even know whether the PRINT
DE>statement
DE>is the equivalent of
DE>printf ("%s", "Hello, world!");

PRINT "Hello World!"; is the correct way for the above. The ';' means to not add a carrage return.

DE>or printf ("%s\n", "Hello, world!");

In this case PRINT "Hello World!" with no ';' will indicate the carraige return.

To get all the fancy formatting that the printf() function has, from BASIC you use PRINT USING. Or else just enter a PRINT a,b$,c(1),"hello world" in a sort of mix and match.

Later...

Try TOSBOX, it runs under DOS, WIN 3.1, OS/2, Win 95. Does a nice job too.

SK>those emulators are just tools to get people away from their atari and
SK>closer to the antechrist.

Aw come on, puleeeeeze!

Most Atari emulators are garbage anyway, and the decent ones do a good
job at putting a more civilized face on a bad computer system.

I doubt that anyone is going to give up their real Atari forever anyway
since most of the PC emulators don't reliably run every piece of software.
Sometimes you still need a real full-blooded Atari computer.

BTW - There are lots of people running OS/2 and Linux which are not
Microsoft products (thank goodness).

On 1998-06-14 martin@llanelli.demon.co.uk(MartinThomas) said:
[re. QuickBASIC and line numbers]
:The line numbers are just labels, you've obviously never programmed
:in Fortran before.

hmm??? Most BASICs, particularly those available in the first home computers and small systems, do not permit lines to exist without a line number. The line numbers are used for editing, not just as labels. It's probably that deviation from something that was probably standard practice by then which was regarded as strange.

(Another interesting point: VB5 *doesn't* accept line numbers at certain points.)

Now, *that* is ugly.

Also, a lot of Basic's will refuse `GO TO', but will make you type `GOTO'
(not that you would want to for this sort of thing).

If you want to get to the *really* irritating stuff, look into text
formatting when outputting numbers and text. I've never seen two dialects
that used compatible systems. (Example: it appears to be *impossible* to
get Microsoft Basic (or QuickBasic) to emit a positive decimal number
without a leading space.)

>>"If you've seen one Forth, you've seen - well - one Forth."

Never done much Forth programming. OTOH, I've never *wanted* to...

Hmm. Everything is possible, but I haven't seen a Forth that didn't let
you do at least

." AARDVARK"

Of course, looping has often been creative ... but

BEGIN
." AARDVARK"
0
UNTIL

usually worked, IIRC.

Hello there!

Crown of Creation 3D, the ultimate space-action simulation for the Falcon030, finally got its own homepage!

After the overwhelmingly positive reactions of many players and magazines, now the latest facts on this standard-setting game can be accessed via internet.

Simply go to http://www.tu-bs.de/~y0001569 to see this:

- The story
- The features
- Test reports
- CPU-/DSP speeder support
- Online order CoC 3D
- Get the latest updates (V1.3b)
- Screenshots

All pages in Deutsch/English.

See you soon!

The M$ Basic in the Commodore PETs (and C64 I think) had "GOTO" *and*
"GO" and "TO" as separate tokens. So it allowed to write "GO TO", but
I never saw a program using that.

>If you want to get to the *really* irritating stuff, look into text

Well, a DEF FNpl$(x)=MID$(STR$(x),2) does come handy :-).

Except that doesn't work with negative numbers. PRINT USING doesn't help,
either, as the - operator expands to either " " or "-" depending on the
sign of the number.

What I usually do is:

```
100 IF i<0 THEN i$=STR$(i):GOTO 120
110 i$=MID$(STR$(i), 2)
120 REM rest of program
```

or, preferably,

```
IF i<0 THEN
i$ = STR$(i)
ELSE
i$ = MID$(STR$(i), 2)
ENDIF
```

(You know, writing that first example was the first time I've used
multi-statement lines for... er... a long time.)

<SNIP>

You lot were deprived, I had the honour of using SuperBASIC on the Sinclair QL! The string handling on that ruled! Forget all that STR$ and MID$, it all sorted itself out!

Viva la QL!

:.." AARDVARK"

Forth-83. You could do

: TEST ." AARDVARK" ; TEST

but you couldn't do

." AARDVARK" \ because ." was compile-only; you had to do
.(AARDVARK) \ - an analogue of (..)

So there. :P

:Of course, looping has often been creative ... but

:BEGIN
:." AARDVARK"
:0
:UNTIL
:usually worked, IIRC.

True (except where BEGIN was DO, which I've seen somewhere.) However,
again, you wouldn't necessarily be able to do it outside of a word. (In
fact, the rarity is when you can.) Also, you may get problems on some
Forths with:

: test begin ." AARDVARK" 0 until (we'll leave AGAIN for now) ; test

And that's not even touching on when you get out of a DO loop (or if you
even have them).

I love that language. :>

As I recall, SuperBASIC was good, but not quite as good as the original Sinclair BASICs (A$(3 TO 6)). On the other hand, I seem to recall that neither did it require you to dimension strings in arrays to an exact length (so that DIM A$(10, 10) dimensioned an array of 10-character strings, rather than a 2D array).

No, the QL could do this command. The concatonate command was & instead
of +, if you attempted a$ + b$, it would try and add the numbers in the
string, and commands like number = string$ worked instead of needing
rubbish like str$ and stuff like that.

It was cool. Bit slow though!

Irrelevant; 10 PRINT "AARDVARK" is obviously compile-only, too.

2059. TAF MonSTEr Flea Market July 15th

Newsgroup: comp.sys.atari.advocacy
Date: 1998-06-21 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <358d416a.0@diana.idirect.com>
Source record: 5020

SATURDAY, JULY 11TH, 1998 is the date for the Toronto Atari Federation FLEA MARKET! The doors open to the public at 1:00 PM and will remain open until 5:00 PM.

This may be your 'last chance' to come to a bazaar of Atari related pre-owned hardware and software where you may find that peripheral, application or utility for your ST/Mega/TT/Falcon 16/32-bit computer system or your XL/XE 8-bit classic computer system.

Not only is this an opportunity to buy or sell hardware and software for TAF members and other Atarians, this will also be an event whereby you can learn what you can still do with an Atari, including the Internet, Desktop Publishing, Scanning OCR, MIDI, and much, much, more! There is a confirmed Internet Demo (using the suite of available Internet prgs. running under STiNG), Howard Carson of MGI mentioned that he would be showing Calamus SL-98, and Martin Nueland will do a MIDI demo.

If you have original software or hardware that you no longer have any use for, get yourself a half-table and try to sell it! Or find that treasure that you have always wanted. Great deals should be in abundance.

We are anticipating a good turnout and hoping to have some dealers at this event and thus TAF has booked a larger hall to accomadate everyone. To help defray some of TAF's costs of the event, the following will apply:

Half-Table's will be $5.00 or the Full-Table for $10.00 each. Half-Table's are FREE to TAF MEMBERS. Admision is $2.00 per non-member family but if you are selling and have taken a half-table or more, admission is included. Admission for TAF members is, of course, Free.

The Flea Market will run from 1:00 PM to 5:00 PM, with setup commencing for sellors after 12:00 PM, noon, and teardown after 5:00 PM. This should allow enough time for as many people inside and outside Toronto to attend the event.

As usual, piracy cannot and will not be condoned. You must be selling original pre-owned software only. If anyone is caught selling pirated software or stolen hardware, they will be dealt with severely!!

The TORONTO ATARI FEDERATION Flea Market will be held in the "Gold Room" of the North York Memorial Community Hall on the Lower or Concourse Level of the North York City Centre Library Building at 5110 Yonge Street (next to Mel Lastman Square) at Parkhome Ave. Parkhome is 5 stoplights North of Hwy 401 running East off of Yonge.

Parking garage inside the complex - enter next to the Novotel Hotel on Parkhome Ave. Those comming by public transport can take the TTC's Yonge Subway, North to the North York City Centre Station, then walk through the tunnel into the concourse, down to the food court, turn left and find the Memorial Hall on your right.

Saturday, July 11, 1998, 1pm - 5pm for the TAF "Flea Market. To contact TAF on booking a table or tables:

Well, it's probably the only one. Commodore 64 BASIC had concatenation
with the + operator, and that came in really handy.

Unfortunately, I grew up on Atari BASIC, and while the token handling
and such were superior in many ways, and there was automatic syntax
checking and everything, there was no concatenation operator, you had
to do this:

A$(LEN(A$)+1) = B$

And as you can tell, instead of using MID$, you could just use the numbers
as subscripts. A$(2) was the second letter on up, and A$(2,2) was just the
second letter.

Wanna know how I did MID$(A$,2) type stuff with COBOL?

Takea some weird data declaration:

```
01 STRING-ONE.
05 S1-LEFT PIC X(40).
05 S1-SHIFTER REDEFINES S1-BREAKDOWN.
10 FILLER PIC X.
10 S1-RIGHT PIC X(39).
```

To eliminate the leading character, though, isn't so tough in the code
itself:

```
MOVE S1-RIGHT TO S1-LEFT.
```

This could be one of the few times MOVE actually means MOVE.

But the real unforgivable sin of Atari Basic was the lack of string
arrays. Whoever thought it should be left out as a design decision
should be disembowled, drawn, quartered and mounted on a pike.

A lot of wasted time went into translating "generic BASIC"
programs into Atari BASIC because of this defect.

Well, that would waste a byte, wouldn't it. :)

Yea, soo...

As you know that CompUSA bought out Computer City..Which means that the
stores in CA will get the Apple SWIAS by July supposely according to press
accounts in the CA rags. Makes me wonder if I will cover some of those
accounts.

Bingo. Sinclap has been waging his one-man war against Atarians for a long time - time probably better spent reading a book or taking nice long walks. I suspect it has to do with the fact that he's forgotten his primary goal of defending the Mac and is trying to get his revenge on anyone who has outed him as the ignorant all-talk-no-nothing that he really is - including demeaning language, paranoid ranting and in some cases harassment in the form of flaming e-mail (he has the dubious distinction of being kicked off HotMail for this behaviour).

>I mean if it makes you happy, but I'd suggest you to have a look at
>games before not taking them serious.

Now when did that ever stop the little weinerhead? He's also well known for putting his foot in his mouth when it comes to stating the "facts" - like claiming we couldn't use CD-ROM, or that "90% of all TOS programs fall over on the Milan" (there's a list on the Milan web site for what does run, and it's a long list) - as well as his trying to rewrite history (like claiming he never said or inferred that "Calamus is crap", when he clearly did). A cursory search of DejaNews (http://www.dejanews.com) using the keywords Peter Sinclair, Sinclap or TIFKAS will give you hours of hilarious reading from this blowhard. You may also want to check out the Apple Doomsday Clock web site for an example of what happens when you drop Sinclap into a forum full of knowlegdable PC users - it's like throwing raw meat in front of starving lions :)

No. Likely two bytes. GO token, space, TO token vs. GOTO token.

Just some questions for all the Atari users out there:

1. If Atari came out with a new computer system would you buy it?

2. If the system were not compatible with the ST would you still consider it?

3. Would you buy the new computer if offered a discount or rebate for your ST?

Thanks

Please forward responses to:

Depends on how it's parsed, I guess. It may have been parsed as GOTO
when encoding it, and transformed from GO TO to GOTO after listing or
saving, resulting in zero bloat. And the way the commands could be
written (one or two normal chars + one shift+char) allowed lines over
80 characters, the 'official'
limit.

2071. Atari mentioned in CNET 30 Years Article

Newsgroup: comp.sys.atari.advocacy
Date: 1998-06-29 00:00:00 UTC

Don't take this too badly, but...

> 1. If Atari came out with a new computer system would you buy it?

It won't happen because Atari no longer exists. There is no such company
as Atari Corporation. The End. The NAME belongs to a GAME SOFTWARE
company, that is part of a major TOY company. I see no logical reason
for these people to start developing a computer that would have to
compete against Intel and Microsloft, and then sell it under the Atari
name instead of their own name.

>
> 2. If the system were not compatible with the ST would you still
> consider it?

Are you talking about a non-Atari computer (see above) that would be
non-Atari compatible. I can already see quite a few examples around in
the shops today.

>
> 3. Would you buy the new computer if offered a discount or rebate for
> your ST?
>

No thanks. A rebate on what an ST is worth nowadays would be nothing
compared to what a new computer would cost.

> Thanks
>
> Please forward responses to:
>
> pfloyd@sprintmail.com

Well, now that I've answered... err, what does your poll intend to
demonstrate exactly ?

Cheers,
Nick

Highly unlikely that Atari would come out with a new computer, eh?
depends. I would have to look at the hardware/os/software combination.
Would it be a RISC setup? (a la PowerPC?) questions, I have only
questions! :)

> 2. If the system were not compatible with the ST would you still
> consider it?

not compatible in what way? the Falcon, TT, Hades, Medusa, DirecTT,
Milan, and Phenix are not "compatible" with the ST in terms of
hardware.(68030+)
If that's what you mean, no problem. but if you are talking software
compatibility,
that is *NO* TOS/Magic/MiNT/linux software will run on it, forget it.
I would not buy
such a beast.

It definately wasted two bytes. I once saw a program that grabbed the
GO token and used it to extend basic. Pretty easy to notice the token
and then parse the rest of the line yourself.

I guess we all agree: Atari could have been a contender, but it suffered through several managements that just didn't manage. It's no sadder today than when you and I first discussed it; in fact, I think the situation is even brighter today than six months ago because of what I see in this ng, on the mailing lists, in FidoNet, and from users in general.

I'll rephrase your question to: would you buy a new,
more-powerful GEM/TOS compatible clone computer? The
answer is YES.

>2. If the system were not compatible with the ST would you still
>consider it?

If you're talking about abandoning the integrated
keyboard/chassis (i.e., non-compatible packaging) the
answer is YES.

If you're looking to develop the Falcon computer
further (that assumes compatibility with existing
Falcons, BTW), the answer is YES.

If you're talking about abandoning some of the standard
ports (i.e., MIDI, Mouse, Joypad, Cartridge, or DSP)
the answer is NO.

If you're talking about abandoning the GEM/TOS operating
system (i.e., BIOS, XBIOS, GEMDOS, VDI, AES, etc.) the
answer is NO.

>
>3. Would you buy the new computer if offered a discount or rebate for
>your ST?

No. I *would* get excited if the new computer
explicitly supported some form of DMA to an ST
that could be used as a dedicated printer buffer
that supported dot matrix printers, ink jet printers,
parallel-port laser printers and DMA laser printers
like the SLM 804).

That article has no credibility.
Whilst it's fair to include the Atari they totally ignored the Amiga
achievements. The first multitasking GUI on a home computer surely deserves
a mention, doesn't it?

All,
Speaking of the Amiga, Gateway has announced that they are working on a
new Amiga computer. OS 4 will be a tempory OS for software companies to
build apps then when the new machine hits the streets next year, it will
have OS5. They said that this machine will be better than any consumer
PC available.

The CBM64 had one of the best BASIC parsers I have ever used. It completely
ignored spaces (except within strings) so "GOTO" and "GO TO" would actually
parse the same way. You could even write code with no spaces which made it
difficult to read.

Gateway actually haven't announced anything (AFAIK) but Amiga International
have released those details. They do have full support from Gateway
however, including substantional financial support.
PPC has been dropped in favour of an as yet unavailable CPU/Processor which
supposedly will feature a programmable instruction set.
The new system due in 1999 will be 5-10 times faster then current PII
400Mhz/100Mhz bus systems.
OS 5.0 will be the OS running on this system, with the developer OS 4.0 and
machine (Amiga/PC hybrid) released later this year to allow developers time
to develop applications for the new system and to have them ready when the
new machine is officially released.

Current PPC upgrades will continue to be sold and supported with the manufacturers of these boards (finally) working together to support the Amiga community until the new machine is available.
The OS 3.5 upgrade has been cancelled by AI.

With Gateways backing the Amiga could once again be a viable platform. Besides, we must be due for another platform to kick the shit out of the current Mac and PC systems. How stale can it get ?.

Regards,

Clockmeister.

Actually this is what led to the separate GO token. Later versions of
cbm basic interpreted spaces differently. CBM has a status variable ST
and in early basics it was common for if statements to be written as
if st and 64 then ... This got interpreted at s tan d and caused a run
```

time error since tan is a function. This led to the change in interpretation of spaces.

Slight correction. The XEGS had both Missile Command and Basic. Basic was
the default unless you (a) booted with the keyboard unplugged or (b) pressed
Select or Option while booting.
Wouldn't it be nice if a PC without a keyboard would boot to a game instead
of "Keyboard error. Press F1 to continue"?

If you ask me this new computer doesn't realy sounds like a Amiga at all. It will only be compatible with old amiga apps through emulation. The OS will be completely new and based on a outside developed kernal like BeOS, or Mach. This you can already be done under Linux. It will not include a Motorola CPU, it's probably going to use intels comming Merced chip, or something else shitty. The "new" amiga which will be like a bridge to the new platform which will be released later this year will be based
on the Pentium, so it's clear that they will go for the x86/intel line like everyone else. Don't forget that Gateway has only made intel boxes and never even seen a PPC.

Basicly it's a completely new computer and OS with the Amiga name on it. It's like buying a PC whith the Commodore sign on it. It has got nothing at all to do with Commodore.

What about the Digital Alpha work stations?

That are real computers! After an 8 bit spectrum and a 16/32 bit
Atari it is time to scale up again. Not to a lousy 32bit system. That
was interesting 10 years ago. Nope, time to get 64 bit hardware, that
is progress!

The Alpha processor is for serveral years the fastest processor
available. The newest stuff if quite expensive. But if you go for
the outdated stuff you get a good price. Outdated are:
300-400MHz 21164 processors, they come typically with 96kB
2nd level cache and 1Mb 3rd level cache.
(My system, 300 MHz Alpha 21164, 1MB cache, 64MB RAM, SCSI CD ROM,
1GB SCSI harddisk, Matrox Millenium graphics card and ethernet
network was about NLG 2500 or about 1250 US$, half a year ago.)

Take as OS Linux and you have some real computing power on
your desk.

Bye, Hans

Apple has been around for over 20 years. That's a long time for a computer manufacturer. I don't think they'll be disappearing any time soon.

Are you saying that if a new ST was released it would have to be 100%
backward compatable with the old eighties designed hardware ?.
Emulation is a great solution for backwards compatability.

> new and based on a outside developed kernal like BeOS, or Mach. This you
can already

The kernal will "borrow" parts from other OS's, a lot of the features of
workbench will be retained and enhanced further.

> be done under Linux. It will not include a Motorola CPU, it's probably
going to use

Gateway wouldn't pay $40 mill for a virtually dead platform with only a
small user base and then spend money on redevelopment to sell rebadged

PC's. Who'd buy them ?, Amigans certailny wouldn't and neither would Joe Blow.

>
> Basicly it's a completely new computer and OS with the Amiga name on it. It's like

It's for real dude, and it's an Amiga and it's not a PC.
I can't see a PC being 5-10X faster then the current PII by end 1999.

Besides, what the hell is the problem with having another alternative to Intel ?.

Sour grapes ?
:-)

Regards,

Clockmeister.

The Alpha 21264 is, esp. on the floatingpoint part. Integer
specs are a bit less. And this processor is shiping now. It's
not some magical vapor ware like Intel Merced or a 'quantum
processor' to be released in 1999. It is simply the fastest
processor available.

Bye, Hans

And it's not a Amiga.

> I can't see a PC being 5-10X faster then the current PII by end 1999.

5-10x times faster than what? A sluggish 266MHz P2, or a 400MHz? I wonder
how they define "todays PCs"?

And which is this mysterious CPU?

> Besides, what the hell is the problem with having another alternative to
> Intel ?.

Nothing! Did you say that?

> Sour grapes ?

For what? I think you have missed something obvious and the funny thing is that
you doesn't even know it.

The current Alpha (available since last year) is 4-7 times as fast
as a P2. Next one out next year will be between 8-15 times as fast.

I would just like to know what is the point of all this discussion of an Amiga in an Atari ng.
Falcon030, 14mb ram, 540mb hd, 17" svga monitor, MagiC, Pagestream, NVDI, ExtedDos Pro, ICD HD utilities.

You could wire a buncha Ameoba's and Falcon's together
and rerender all of D2's digital effects for Titanic.

Titanic was officially render on Alphas running Linux.
Amiga can probably do that, they did an great job in babylon 5, but the
Titanic team decided to use Alpha/Linux combination.

2104. TAF MonSTEr Flea Market July 11th - update!

Newsgroup: comp.sys.atari.advocacy
Date: 1998-07-04 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <359d8abd.0@diana.idirect.com>
Source record: 4965

SATURDAY, JULY 11TH, 1998 is the date for the Toronto
Atari Federation FLEA MARKET! The doors open to the
public at 1:00 PM and will remain open until 5:00 PM.

This may be your 'last chance' to come to a bazaar of
Atari related pre-owned hardware and software where
you may find that peripheral, application or utility
for your ST/Mega/TT/Falcon 16/32-bit computer system
or your XL/XE 8-bit classic computer system.

Not only is this an opportunity to buy or sell hard- ware and software
for TAF members and other Atarians, this will also be an event whereby
you can learn what you can still do with an Atari, including the
Internet, Desktop Publishing, Scanning OCR, MIDI, and much, much, more!
There is a confirmed Internet Demo by Dan Dreibelbis (using the suite of
available Internet prgs. running under STiNG), Howard Carson of MGI will
be showing Calamus SL-98, Martin Neuland will do a demo of Logic 2.5,
and Darek Michoka of Emulators Inc. will be offering his latest version
of his GEMulator Atari emulation program for the PC .

If you have original software or hardware that you no
longer have any use for, get yourself a half-table and
try to sell it! Or find that treasure that you have
always wanted. Great deals should be in abundance.

We are anticipating a good turnout and hoping to have
some dealers at this event and thus TAF has booked a
larger hall to accomadate everyone. To help defray some
of TAF's costs of the event, the following will apply:

Half-Table's will be $5.00 or the Full-Table for $10.00
each. Half-Table's are FREE to TAF MEMBERS. Admision
is $2.00 per non-member family but if you are selling
and have taken a half-table or more, admission is inc-
luded. Admission for TAF members is, of course, Free.

The Flea Market will run from 1:00 PM to 5:00 PM, with
setup commencing for sellors after 12:00 PM, noon, and
teardown after 5:00 PM. This should allow enough time
for as many people inside and outside Toronto to attend
the event.

As usual, piracy cannot and will not be condoned. You
must be selling original pre-owned software only. If
anyone is caught selling pirated software or stolen
hardware, they will be dealt with severely!!

The TORONTO ATARI FEDERATION Flea Market will be held in the "Gold Room" of the North York Memorial Community Hall on the Lower or Concourse Level of the North York City Centre Library Building at 5110 Yonge Street (next to Mel Lastman Square) at Parkhome Ave. Parkhome is 5 stoplights North of Hwy 401 running East off of Yonge.

Parking garage inside the complex - enter next to the Novotel Hotel on Parkhome Ave. Those comming by public transport can take the TTC's Yonge Subway, North to the North York City Centre Station, then walk through the tunnel into the concourse, down to the food court, turn left and find the Memorial Hall on your right.

Saturday, July 11, 1998, 1pm - 5pm for the TAF "Flea Market. To contact TAF on booking a table or tables:

TAF Voice Telephone Answering Device - (416) 425-5357
Dan Dreibelbis, VP, 416-766-4743 or dreibel@idirect.com
Dave Lee, Treasurer - Sysop TAF ONLINE EMC & BBS (28.8 8-N-1) - 416-421-8999 or dave.lee@taf.ftn.org or
via NetMail at AtariNet 51:5/0 or FidoNet 1:2424/823
TAF home page - http://www.interlog.com/~schrist/taf/
TAF PHOENIX page - http://www.outer-net.com/~redfrog /atari/phoenix.htm

They did a great job on the first *FEW* episodes of B5, but they went to more
powerful equipment later. Also, it was an Amiga coupled with the Video
Toaster, not just an Amiga alone.

The article was from First! by NewsEdge Corp. You can find them on
http://www.newspage.com, but that was several weeks ago.

The were using some of their own programs. I cannot recall what's the name of
the program.

I would think that the Alphas only did the rendering, so it shouldn't be to hard to port a
renderer to it. The editing probably took place one something else.

The point was: Amiga can ALREADY run the OS an necessary
support tools. All D2 would need to is to copy them over
to the Amiga farm and re-run make.

They used Photorealistic RenderMan from Pixar. This is a quite
expensive aplication, only used for rendering. The RIB data
(RenderMan Interface Bytestream) was generated by an
export function of 3D-Software Softimage.

A even better renderer is freely available for Linux, the Blue
Moon Rendering Tools (BMRT) of Larry Gritz. This software is a
combination of a raytracing and radiosity renderer.

As 3D modeling tools you can use Amapi 2.11, SCED, Leo3D or
AC3D. For correctly moving physical bodies you could use
Xaero.

And ofcourse you have good old POV ray, whici can be a very
fast renderer when you are yousing a Beowulf configuration.

I am quite sure this list wasn't complete.
So there are some 3D tools available for Linux.

(No I am not a 3D software specialist. I am just a reader
of the excelent German magazin C't (Computer Technik), they
have a very good coverage of Linux items.)

John Dean, a former V.P. of an Atari user group called in on last nights WCDB talkshow Apocalypse 91.

Admittedly, I don't have any experience with Atari systems, barely recall even seeing what the screen looks like. But I do know the Atari has been used by many musicians.

Anyway, John got me thinking about the Atari and how it seems to have had a bigger blow to it than the Amiga. More specifically the users and how they must feel about such.

In the big picture, it's all about productivity with the tools we call computers. What has got to be the biggest drawback in productivity is software, what is available and what is possible.

In the 1960's the Software Crisis was first identified and labeled. It is this problem that has put much constraint on this tool we call a computer. It is this problem that companies such as Microsoft have found and exploit to their unfair advantage.

Well this is going to change. This problem is going to be removed, once and for all. No doubts!!!

For the Atari, as well as other systems that have been suppressed by this unfair advantage, it means breathing room to once again move forward.

The how is simply a matter of moving into a method of programming/coding that included automated code generation. Automating thing such as the Dos', Don'ts' and standards in programming. Making the programmers job much easier and programs more solid or much less buggy.

At the same time as this, due the inherent nature and usability of the tool to do this, users will find a greater level of productivity in being able to define the things they repetitively do on computers, so to automate these things.

What is needed for Atari users is someone (or team) to create an Atari version of this tool. The tool is the "Virtual Interaction Configuration"

Once this is done then it's only a matter of building up the dictionaries of vocabularies that allow overcomming the software crisis disadvantge.

From here the best will move forward, past the suppression of those ho have taken unfair advantage of the problem.

Why
>buy something worst, heh? Obviously, they want to copy it.

AFAIK Alpha processors are manufactured by Digital which is now owned by Compaq and they're the one who own the technology. Judging from your conversation Intel have bought or licenced Alpha technology, is this true? If that's the case, where can I find more information about this since I have obviously missed something.

But this copy part is ridiculous, Intel needs the latest in technology just because of their efforts to keep the old structure and concept they used in the Intel x86 processors. A concept dating back more than Intel CPU's and that was great ... back in the 80's in the first Z80 home computers. Today Alpha and PowerPC processors are way ahead if you compare the ratio between technology used and performance given. Intel has often used better technology if you look at plain electronics involved. Still they get outperformed by relatively simple and cheap RISC processors.

Linux/68k ~ Linux/Alpha...

It's the OS, not the hardware that's the central
point. D2 is a unix shop so any other Unixen fit
in rather easily there...

If that is the case you can still do it with most things with a CPU
and now Linux. You can run Linux and MiNT on a ST, so a ST can do it,
so what is the bid deal?

Download the source and re-compile it on your Falcon or
Ameoba. This should work with Linux as the rest of the
system is open source.

But how many Amigas do you want to use to do it? Rendering is strictly a number crunching affair. Rendering has nothing to do with the graphics hardware that makes the Amiga special. One Alpha machine running at 533 Mhz can probably do what 50 to 100 '040 Amigas could do. Just the savings on power consumption would justify the use and purchase of ONE Alpha as opposed to upty million Amigas. And the Titanic people were using a FARM of Alpha's to do the rendering. And yes, other tools were used to generate the scenes. If I remember correctly Mac, NT, and Unix boxes were used to generate the scenes.

I never said nor implied such a thing actually.
Although those coprocessors might get put to
good use if someone's crafty about their shared
libs.

I doubt that a Unix shop like D2 would put up with Mac
& they likey only put up with NT because of it's market
inertia/vendor support.

NT was the frontend, Linux was the backend. Although a
port of Lightwave to yet another Unix shouldn't be too
strenuous...

In 1988/89 I was running X11R3 on a 4MB Sun 3/50 (68020 based UNIX
workstation) and other Sun 3 machines. There is no problem running X
in 4MB. Of course I don't know how big a footprint MiNT has (my Mega
4ST has been in storage for a few years).

2132. Atari ST520 system for sale.

Newsgroup: comp.sys.atari.advocacy
Date: 1998-07-12 00:00:00 UTC
From: kgroombr@interquest.de
Message-ID: <19980712.A202958.12519@amiga.interquest.de>
Source record: 4993
Cross-posted to: comp.sys.atari.st,comp.sys.atari.advocacy

I recently aquired an Atari ST520 system is barely used. I received
it in a trade and thought I could use it, but really can't.

Here is what I have got:

Atari 520ST
Atari Megafile 60 hard drive expansion unit
Atari SC1224 color monitor
Atari SM124 black and white monitor
Atari SMM804 printer

I have all cables and such to connect this all together.
Currently the Megafile 60 and the SM124 monitor are labeled
for 220v European power, but for all I know it is an easy
conversion to get it to run on 120v. If not, transformers
are available to make these run on 110 power. I have some
but they will cost extra to ship with this.

I have absolutely no idea what this stuff is worth if anything,
but I am willing to accept offers or trades for PC and
Amiga stuff.

Everything is in perfect near new condition. I am in the
military in Europe, so I can ship to a U.S. or European address.

Kenton Groombridge

:4ST has been in storage for a few years).

According to reports (years ago) in this forum you can have X with an xterm and a shell up and running without problems (in 4 meg), but thats about it. MiNT itself is not the problem. The Xservers I have here are sized in the range 2.5 - 3.5 megabyte. I'd guess that the one for ST is about the same size.

Its been a while since I last posted here. As a result the number of posts have declined.. It's time for sinclap to be controversial again to raise that blood pressure.

Now that Cubase VST has been avialble for the PowerMac line for some time. Why would new Cubase users and Atari legacy ST folks would upgrade to a Hades, shades or what ever instead of a PowerMac or wintel based cubase solution?

The Mac/wintel platforms are more powerful for less money. That concept has been lost on the Atari boobs(since I own Atari game machines, does that make me an Atari boob?)

Just curious..

Peter S.

as usual, TIFKAS puffs himself up and tries to make himself more important tahn he actually is - in reality, he's nothing more than a zit on the face of the computing world. Posts have actually been pretty good the last few weeks despite his "help"....but at least TIFKAS admits that his main efforts are as a "troll".

>Now that Cubase VST has been avialble for the PowerMac line for some time. Why >would new Cubase users and Atari legacy ST folks would upgrade to a Hades, >shades or what ever instead of a PowerMac or wintel based cubase solution?

why? simple - cost. At over $3000 CDN, a complete G3 is simply too expensive - AND it doesn't have built-in MIDI ports (which are STANDARD on the Hades) - and then you have to add the software! Even though MIDI ports are optional on the now-released Milan (which TIFKAS chooses to conveniently ignore), with that option it's still MUCH cheaper than buying the G3. The much-hyped iMac would have been the PERFECT platform to run Cubase VST on, but thanks to the idiots at Apple wanting to put non-standard ports on it, it becomes an instant closed architecture boat anchor. Windblows platforms are notorious for having timing problems regarding MIDI that make them a problem than a solution for the serious musician - and shame on you for even expecting us to consider a Bi66 6ates "solution". As usual, TIFKAS has his foot in his mouth (when he doesn't have his head stuck up another orifice).

>
>The Mac/wintel platforms are more powerful for less money. That concept has >been lost on the Atari boobs(since I own Atari game machines, does that make >me an Atari boob?)

"if it ain't broke, don't fix it". That's the credo of many music makers who still find use out of their Ataris now and for years to come. A better concept than to endlessly throw money at the green-eyed monster called "techno-lust"

more the concepts of "the truth" and "fair play" have been lost on TIFKAS. Your "boobhood" has certainly been well-ascertained over the last five years - note that he STILL can't set up a proper newsreader on his Mac despite his rants that the Mac is the SUPERIOR Internet platform, unlike me, who have set up my "inferior" copy of NEWSie in

minutes. And as a Mac-owner, I think I can speak more of the Mac platform more truthfully than this misanthropic blowhard, who I suspect is really posting to the net on a Commodore 64 in his mom's basement apartment with 12 30-foot piles of MacUser magazine which he skips through naked merrily at night (not that there's anything wrong with that).... :)

Good points. I've been an Atari user for quite some time. In the early eighties, I had several 8-bits, then I bought an STE back in 1990, when Atari was still a company and the Falcon hadn't been introduced yet, and I used that STE with (regular) Cubase for a couple of years. Then I started thinking about switching to a PC or MAC, but I decided to upgrade to a Falcon around 1994 because I got an amazing deal on one from a large music store chain called Guitar Center. They were phasing out their Atari support, and the sales guy didn't seem to know much about the Falcon. That was around the time new Falcons (4 megs / 80 meg HD) were going for around $1300. I go it for less than half that (new in the box with all the software).

Anyway, I've been using it with Cubase Audio now for a couple of years, and with the 16meg memory upgrade, and 4.29 gig Seagate Barracuda drive, it works pretty well. But seeing my roomate's new (and cheap) PC running Cubase VST (as well as the extremely cool Rebirth TB 303, TR 808 emulator), I must say switching over is looking very good again. I'm toying with the idea of getting a NEMESIS accellerator board for my Falcon, but I can't help but wonder if my money would be better spent on a new PC or MAC?

Don't get me wrong. I enjoy the Atari, and can do pretty much everything I need to do with it (Internet, DTP, music, etc.) but that's beginning to change - at least with regard to music software. Of course I have heard many stories of timing problems running any incarnation of Cubase on a PC, and the G3s are still quite pricy - but I'm pretty sure I'd want one over a PC (for music especially). And of course I don't care to add to Mr. Gate's bottom line either - which is impossible _not_ to do with the PC route. So, for now, I'm sticking with the Falcon, but in the near future, who knows...

Hmmmm, make a decision like that based upon one application huh? Do
you do that? If they want to move over it's their decision.

>The Mac/wintel platforms are more powerful for less money. That concept has
>been lost on the Atari boobs(since I own Atari game machines, does that make
>me an Atari boob?)

Powerful? Maybe. A bus is, after all, more powerful than a
motorcycle. And you have that nice little man sitting in the front,
telling you where you want to go today, just like the nice little
people in Redmond and Cupertino.

Boob I may be, but I'll stick with my Atari. It's not so much the
'Presence of Light' as the 'Absence of Dark'.

>Just curious..
<nod> I see. I always understood curiousity to mean something
entirely different, but perhaps in your lexicon it is defined as
"Mindless drivel based upon insufficient and unsubstantiated
information endlessly and indiscriminately foisted upon those who dare
to snicker at your every foolhardy attempt to formulate a coherent
thought."

I'm not sure that I understand this one. From what I've read, the iMac has the
following ports:

(2) USB
RJ-45 (for 100Base-T ethernet)
(2) RS-232 (for phone and modem)

All of these ports are very standard. I would be more worried about the lack
of built-in MIDI.

well. maybe I did go a bit overboard there :) I HAVE seen USB
working (went to a pre-launch demo of Windows '98 with my boss) and was
most impressed - and I'm glad to hear regarding MacWorld that there are
some more USB stuff coming with Mac drivers (though I suspect that the
USB market is coming in more with the launch of Windows '98 and that
Apple is riding their coat-tails). See, unlike TIFKAS, I DO check out
stuff before I open my big yap, and I DO admit when I'm wrong - unlike
TIFKAS, who responds with insults and bragging about his monetary
assets and his "abilities" as a "macho stud" in order to mask the fact he
has the IQ of a burrito. :)

Still, for a musician, the ability to have a configurable system is
paramount. In the case of the iMac, the way it's designed precludes any
attempt to modify it to use it as a hard-disk recording station, much
less any upgrades you need to do (what if you need to upgrade the RAM?
Is it any wonder Apple buckled under and finally made a 56K modem
standard rather than the 33.6 they were originally going to foist on
their customers?). And in the case of hard-disk recording with a
computer, SCSI is the standard for its proven track record of speed and
reliability; USB is an unknown quality for the moment whether it can
handle this. I'll have to ask Club Cubase if there's any plans to
support USB in later versions of Cubase VST.

one thing is still certain that we can agree on though, TIFKAS is
still a loser troll who's forgotten his original primary goal of
defending the Mac (a platform that for the most part can defend itself)

in order to try to get the last word - and has made himself a
laughingstock to all computer users in the process. :)

Until better support for USB actually comes on line, yes
it can be considered a non-standard port.

Do you mean support in the OS sense or in the sense that few vendors have products for it? I would disagree with the first because the Mac OS simply treates USB like ADB and Windows 98 has explicit support for USB. I would disagree with the second because there are quite a few peripherals that you can get for USB right now. And if you can't get a peripheral that you need for USB, you can always spend $50 on a USB->SCSI adaptor.

If you need tons of RAM (though the iMac will allow you to go to something
like 256MB, I believe), a really fast HD system and lots of upgradability
then you are well outside the market that target market of the iMac. You are
also looking for a solution that Atari cannot provide.

USB is cheaper, allows you to add and remove devices while your system is running, allows more devices and doesn't require the user to select IDs. OTOH, it's slower. In any case, USB is not meant to replace SCSI. It's meant to replace parallel, serial, joystick, keyboard and mouse ports.

I suppose when I get my imac later in the year, it's cable modem 'baby'..
Since the cable modem will be installed in my super fast standard 100mb
ethernet port, should have i paid for this unecessary modem which I will not
use?

Also I will have to pay a $150 installation fee regardless that I have a built
in ethernet connection. The fee is the ethernet card for the wintels..

Depends on the cost of the board. Most likely that the price for the Falcon
card could yield you a spanking new Umax Powermac clone with at least a 240
mhz processor for $599. Price includes 32m and 3G's..

> future, who knows...
>

But you maybe missing out...Now that PowerMacs and wintels are super cheap you
can use the power of the browsers - IE and Communicator to get full use of the
web...$599+ buys a nice close out umax Mac OS clone..

2152. Reflections on Price & Power

Newsgroup: comp.sys.atari.advocacy
Date: 1998-07-18 00:00:00 UTC
From: tross3@hamtel.tds.net
Message-ID: <6op3i3$73u@news2.tds.net>
Source record: 4863

This is a little long, sorry, but I just had some random thoughts regarding price and power.

Just a little background: I work for an international paper products company, and my particular mill employs approximately 1,300 people. In my capacity as a 'spare' I have occasion to work in many of the departments throughout the mill.

This week, I am working in materials (or purchasing). Of the fifty-nine purchase orders that I sent out, seven were ordering personal computers (6 PC, 1 Mac). I know, from working in (among other areas) Information Tech., Accounts Payable, and Purchasing that my company is averaging about 25 personal computers a month. Anyway, as I was entering the purchase orders for these computers I started thinking about TIFKAS' assertation that 'Atari Boobs' refuse to accept the fact that a Mac or Wintel platform is cheaper and more powerful than an Atari.

Here is a rough idea of what was spent on these computers, and just a minimum of software - mostly Office '97, and some licensing fees.. Three of the packages were over $8,000.00.; three were a little more than $6,700.00, and one was just a little over $5,800.00 (and no, it wasn't the Mac). This is just for the basics: drives, modems, monitors - no printers or anything. Now, I understand that corporations are more likely to spend money on features that they don't really need and that that accounts for part of the price, but we're not talking supercomputers here... mostly just 233 mHz Pentiums.

OK, now.. the company buys these systems, let's say at an average price of around seven thousand dollars. What happens with them? How are they actually used? (And remember, I actually work in all of these departments, so I see it firsthand)
1- As a terminal to network to our company's AS 400 Business System (just recently upgraded from a System/36), running software that for the most part was written in 1984. This is where the real work is done, not on the fancy PCs.
2- Trying to use Excel as a spreadsheet, desktop publishing program, forms generator, data base and lord only knows what else.
a- Word? Hah. Most never touch it, and aside from occasionally changing fonts, some basic tables, and the laser printed output, they don't do anything I wasn't doing with Letter Perfect on my 400 way back in 1980.
b- Access? PowerPoint? (and so on) - 19 out of 20 wouldn't even be able to tell you how to load & run it, much less what it was for.

3- Playing Solitaire, pinball, minesweeper, checking email, and printing photos/graphics that they downloaded from the internet. Naturally, there are some exceptions to this, and some groups actually get some good use out of some sophisticated applications, but it is either on a turnkey computer, meant to manage process control or things of that nature - the engineers doing their blueprints, and the IT people themselves - but that amounts to less than about 2% of the computers in use at my mill.

A day doesn't go by that I'm not called by coworkers 5 to 12 times to help them figure out how to use a program, recover from a crash, or explain how to set up their computer at home. I have no idea why they would call me, instead of Info Tech.... after all, I'm just an 'Atari Boob.'

I'm constantly amazed at the number of simple (or complex) things that I can't get accomplished on these $7000 systems that would take me a matter of seconds on my Atari. Why should I have to be told that there is no .dll to import a JPEG into a report I'm generating? Be told that I can't use the 16-bit version of Acrobat Reader with this 32-bit Operating System? Not be able to access files because some of the desks are using Windows 3.1, some '95, some '97, and some NT? Now, granted, this is all a function of the available (or installed) software, but if the company is spending $7,000 then I sure as **** should be able to do something that I am able to do at home with shareware or freeware programs. Sure, go out and buy the software you need. Add it right on top of the $7000 you've already spent.

And don't even talk to me about crashes and munged applications... Or cooperative multitasking... or network failures... or or or ad infinitum.

I've a coworker that bought himself a nice Aptiva back in April. He did get a pretty good deal on the computer itself... But now, months later, after purchasing a monitor, printer, scanner, photo printer, digital camera, and gobs of software that he himself admits that he'll probably never use, he is up to a total investment approaching _ten_thousand_dollars_ .... so, let's not blithely talk about how cheap PCs and Macs are, alright?

A couple of corrections:
That's 59 purchase orders today, not this week :)
and
In the "Constantly amazed" paragraph, I meant Office '97, not to imply
that there was any such beast as "Windows '97"

well, hello sports fans (but espescially The Idiot Forever Known As Sinclap)...

I took the plunge for work and bought myself a nice used Mac PowerBook 140 for use as a PDA unit. And so far, I'm quite pleased with it.

And, as you can see, I'm posting this using Newsreader, the wonderful USENET newsreader program for the Macintosh. Which mens that if someone like me can get on the USENET in minutes on a Mac with just a small amount of configuration, then someone like SinClap, who has ranted long and loud about how his Mac is more capable of being an internet machine than us poor "Atari boobs" should be more than capable of taking the plunge and not having to use the crutch of DejaNews to post his MCIBTYC drivel.

the writing's on the wall, TIFKAS, PUT UP OR SHUT UP.

BTW, no need to worry folks - I'm still in the Atari camp, for as soon as I get this puppy a bigger drive and more RAM it's gonna become the most perfect Atari laptop you'll ever see via MagiCMac :)

I have to say that I agree and disagree. The situation you describe is
common enough and I see much of the same thing myself. Lots of
money spent on hardware and software that isn't understood, isn't
used or doesn't work.

However, it's perfectly possible for a consumer to educate themselves
and put together a decent system that does work and doesn't cost
both arms and a leg. Notice I said possible, not common.

Still there's something to be said about the lure of using the ST and
even older systems. These were machines, as were the machines before them,
that you could really understand and that you could actually make do the
things
that you wanted to with a reasonable investment of time and money.

oh, that's nice TIFKAS. However, the cost of the Nemesis is $100
US, or $159 CDN - and I know that because I have one in my Falcon,
which I bought from Titan Designs on one of my trips to the UK.

Care to share with me your source for a $100 US Umax clone? 'Cause
I'd like to buy each member of my family one :)

Only a "boob" like TIFKAS who has no idea what he's talking about
would make that gaff. Next time do your homework before you presume to
make one of your "expert" advice to us Atarians (like calling Calamus
crap when you've never even used the program, or claiming the the Milan
"fails to run 90% of all TOS software").

You need drivers for each of the devices that you attach unless they will work with some sort of generic drivers. Windows 98 provides those drivers for keyboards and mice but you need software from the vendor to support their particular scanners, printers, etc. (though drivers for some of these devices ship with Windows 98 and are hot loaded when they are needed). I haven't heard of any USB device support for FreeBSD.

> That's the whole point of standards, actually; so that
> you know that you can plug something into it and get
> some use out of it.

That's not a very good definition of a standard. I like the Merriam Webster defintion better:

...
(3) something established by authority, custom, or general consent as a model or example
...

As you can see, the definition doesn't not guarantee any particular level of usefulness. There are many standards for computer hardware that have never been directly useful to me.

OUCH. Bring back SCSI...

Still, even then, it's a driver support issue which typically
is a vendor issue & not an OS one.

The alternatives you suggest all run Multi-tasking OSes (with the exception of the Mac which sort of pretends) ... Multi OSes and MIDI do not get on. Time and time again musicians bare testimony to the rock-solid timing of the humble single-tasking Atari ST.

VST is pants as is any program of its ilk. Despite what they would have you believe music cannot be made within a computer only and a good sound requires an outboard mixer, effects processor, professional digital mastering format etc etc not to mention the difficulties of plugging acoustic instruments or high-quality microphones into the badly insulated poorly performing reality that is a 'sound-card'. Of all the many home studios AND professional studios I have been in I see one computer in use more than any other ... an Atari ST :)

A true classic.

Jim.

SCSI requires drivers for it's devices as well. The OS may provide drivers for generic storage devices and scanners but it can't provide support for every conceivable device. Just as USB can't.

> Still, even then, it's a driver support issue which typically
> is a vendor issue & not an OS one.

Very true. All you need is a driver for the interface card and then the vendor can support their particular device.

Which I already explained: USB allows the hot attachment/removal or devices, USB allows 127 devices, USB doesn't require the user to set device IDs and USB has a huge maximum cable length.

Not to mention it provides comic relief & Bill's expense...

At the rate USB vendors are moving, SCAM just may
overtake them. They've had a free ride onto most
new systems sold lately & haven't done much to
take advantage of it. Infact, SCSI based solutions
have seen their largest market penetration during
that time.

That's really funny. Your talking to users who have kept the same
machine for probably six to ten years and you idea of a long time is a
couple of weeks? Your a real joker.

>Now that Cubase VST has been avialble for the PowerMac line for some time. Why
>would new Cubase users and Atari legacy ST folks would upgrade to a Hades,
>shades or what ever instead of a PowerMac or wintel based cubase solution?

Because of the Mac O/S. Real simple. It isn't good enough for the U.S.
Government, why shoud musicians put up with it?
>
>The Mac/wintel platforms are more powerful for less money. That concept has
>been lost on the Atari boobs(since I own Atari game machines, does that make
>me an Atari boob?)

How can something cost me less money if I just remain with the system
I currently have in use? Surely they are not giving PC's and Macs (at
least not yet) away?

Why no response to the Dept of Navy dropping Apple and going to Win 98
based machines for servers? Actually another update since that post is
a directive from the NAVAIR commander that in a couple years, only PC
based machines will be allowed for offical use on hundreds of
thousands of government employees desktops.
That really has to put a dent into Apples plans considering their
declining rate in the market place.

USB wasn't really viable for most vendors until Microsoft added support for it
in windows. USB is a good standard and I have already explained why.

I wholeheartedly agree. As I said, those were just some random
thoughts. I respect the ones that approach the system as a tool,
because it offers a way of accomplishing something that they need to
have done. It is just unfortunate that so many pursue - shall we say
- "other venues".

>Still there's something to be said about the lure of using the ST and
>even older systems. These were machines, as were the machines before them,

My original 400 is still in use daily at a friend's photo lab. Sure,
it's almost 20-years-old, but as long as it continues to accomplish
what he needs done he plans on keeping it.

Terry

Hello to all,

I've had a 520ST and 1040 ST running since 1986. Just got a 4 meg Falcon.

I'm hoping to find original disks for some of my old programs, particularly the old Astrology program that came from the APX or Antic archives.

Any leads for those things? My wife loves the old Astrology program, and I'll buy it from someone if I need to.

Thanks,

Craig Morehouse

One of the first big MiNT distributions, the TAF-kit, came with X11 as default GUI. It works nicely on a 4meg ST. But lemme get this discussion straight, so far the line was that an Amiga can do anything an Alpha can do in Linux because an Amiga will run Linux as well, but that this doesn't go for Ataris because MiNT isn't fully Linux compatible? Are we forgetting that Linux will run on an Atari as well? (And, again, that X will also work under MiNT).

Maurits.

It may not necessarily go for MiNT.

That does not address Atari in general.

A Falcon will quite happily run Linux and could
quite happily contribute to a D2 render farm
right beside an Ameboa, an Alpha, a Sidewinder
or any other supported platform...

>run on an Atari as well? (And, again, that X will also work under MiNT).

Atari Fans! Finally a Microsoft product you can use.

Guaranteed not to crash! (Although, it burns quite well.)

Priceless!
(Slightly higher in Canada)

is pleased to announce the immediate availability of fine, handcrafted
writing paper:

100% Hand-made
100% Recycled
100% Post-Microsoft content

OK, not so fine actually. I'm just starting this and am learning as I
go - But it is perfectly useable writing paper, approximately 8.5x11
inch. Guaranteed to be 100% repulped Microsoft documentation and MS
generated printouts. This is the first in a series of Atari-related
items that I will be making available. This is pretty much just to
raise a small amount of capital to enable me to make Atari-related
memo pads, blank books (and some with Atari info, I'm in the process
of negotiating with some people at the moment) and a planned
Atari-generated, hand-bound (hard cover) Atari-specific book
(hopefully the first of a series).

Contact me for more information

tross3@hamtel.tds.net

Thanks!

FS: I am selling a bunch of my Atari stuff in order to raise some money toward the purchase of a TOS clone. I haven't decided which clone to buy yet, it'll be a toss up between the Milan and Wizztronics machine.
I have divided the stuff up into two groups. The Jaquar Group and the ST Group, and that's how I want to sell them. I live in Loudoun County, Virginia which is in the greater Washington, D.C. Metro area, so I'm looking for buyers primarily in that area , it'll cut down on the cost of shipping :).

JAGUAR GROUP
Complete Atari Jaguar
Complete Jag CD
11 Carts and 3 CD's

ST GROUP
Complete 520ST with 4megs of memory
19 Programs, 27 games, and 1 joystick

Interested persons may email me at: Seahawker@juno.com
Thanks,
Sam Ferrer

He he...I eventually well one day. I am just to worn out to do so from my
busy schedule plus I like deja. You need to read before you critcize because
there are Atari Jihads who use deja as a newsreader..

Can you run pointcast?

show me where I can find it, and I'll be more than happy to try to
set it up. You realize, of course, that if my PowerBook isn't designed
to run it that it would be perfectly pointless.

I think if you look a little closer, those who've been posting with
Deja have been running Wintel machines, and have mostly curious about
comp.sys.atari.st and its content. Quite a few want to learn how to
hook up properly using their Ataris.

As for "Atari Jihads" (a term I find offensive), the only person
that's fit that description in years recently appeared in
comp.sys.atari.st advocating hatred, abuse, and death for anyone using
any sort of Microsoft product (yes, including Internet Explorer for the
Mac). Let's say that after the flames subsided this idiot was rendered
extra-crispy :) by those in the group who, though they have legitimate
beefs about other platforms, are way more open-minded to those who do
use those other systems.

Yea, I like to go to C.S.A.A and watch one with the pet name of
SinPlop reach around his behind and eat what he spews from his mouth.

You've lost your touch, SinPlop. Why don't you just go purchase one of
Bill's machines like your shrink says and get it over with. You'll be
a lot happier.

From: jedi@dementia.mishnet
Message-ID: <slrn6rpel0.asv.jedi@dementia.mishnet>
Source record: 4897

The leading Linux print publication _Linux Journal_ is
running a WishList/Survey @ http://www.linuxresources.com/wish/
for titles that people want ported to Linux. I couldn't help
but notice an entry for Cubase...

...if any of you think you might be interested in Cubase
for Linux you might want to mosey over there and vote.

While there's a certain implicit assumption that these
ports would see the light of day first on PC Clones,
Linux also supports a wide array of other platforms,
including 68x00's with MMU's (TT, Falcon, A2000).

BTW, has anyone tried Linux on any of the newer TT clones?

Pointcast is a push client that requires a proprietary
server for support. Niether of those attributes are
particularly impressive.

This arrived in my mail the other day - thought you all might get a smile from it - I did !

Subject: The new IMAC's - Specificaly created for users

From: Apple Canada - Creators of the finest computers on earth.

To: MacIntosh Users Everywhere.

With the successful introduction of our new IMac we have redeveloped the platform to conform to users needs.

Specifically, our new IMac comes integrated with specific software and hardware for certain groups of individuals (see Chart below). These IMacs will be available soon at fine Apple Dealers everywhere.

IMac G3 Tailored systems Code 39474

AhhMAC - System suite of software and hardware for Medical Doctors/Nurses.

OiMac - Jewish and Hebrew text, translation and OS

HighMac - Control and maintenance of Hydroponic operations.

EhMac - Canadian translation software and OS

FlyMac - Air Traffic controllers and Pilot operations software.

AyeMac - Irish, Scottish Translation software and OS

SighMac - Psychologists and Social worker software.

WhyMac - IBM and compatable software solutions.

NighMac - Portable system with FRIENDly software solutions.

WryMac - Complete tools for debugging,virus killer, systems diagnostics, etc..

PieMac - Software for Bakers and Donut shops.

CryMac - Baby food preparation and diaper change software.

GuyMac - Race car driving software, Bikini beach Internet Access.

EyeMac - Laser Surgeons operations software and OS.

TaiMac - Tai-Chi and Karate systems solutions. -- *Do not confuse
with TAIMac.. our Taiwan translations software.

ByeMac - The end of this comical text.

Dear Sirs or Madams,

I am sure that Dejanews can relate to small niches in the computer market place, and the effects of even minor bad press or content can have in those areas.

The comp.sys.atari.st, comp.sys.atari.tech, comp.sys.atari.programmer and comp.sys.atari.advocacy are groups that help propel the continued use and marketing of Atari related software and hardware. These groups are frequented by avid Atari users from around the globe. Many programmers continue to release new software or announce updates to existing applications there. Several Atari/TOS clone manufactures announce the release of new, Atari compatible clones on a basis almost as frequent as Apple announces it's new products. These products fill a niche market, and are often marketed at a cost that barely covers production and development, by people that understand computer users with alternative ideas on what current personal computing needs are. These newsgroups provide the necessary global communication which enables users such as myself to maintain my personal computer activities.

First, I would like to point out that I think that Dejanews provides one of the most important aspects available to Web users. Information. I realize that it is up to each user to evaluate that information, and decide themselves the accuracy of its content. However, the users of the above newsgroups have had to tolerate the intentional attempts of one particular person to denounce any new release of Atari software and hardware from within those groups for the last several years. It would be understandable if his comments were confined to the advocacy group, where such "flames" and "mud slinging" are considered acceptable, but he continues to interfere with the function and charter of the other existing Atari newsgroups. During these past years, complaints have been sent to Internet Service Providers from which he post his messages from, and what I believe to be factual, has either been told to cease and desist, or had his accounts revoked.

At this time, this user, Sinclair2246@my-dejanews.com, continues to promote his destructive statements and inaccurate facts and opinions

by means of your service, Dejanews. While not taken seriously by established users, the deterrence of even a few new users to the Atari community can mean a loss that is felt by all in our community.

With that said, I respectfully request that you investigate his continued abuse of these newsgroups through the Dejanews posting service, and for myself, and a hundred other users, remove his privilege of using your service to continue this undermining presence of an immature, irresponsible Apple Computer Representative.

With deep regrets,

Michael Grove

with the problems Apple is facing right now (especially with the
CompUSA coupon fiasco) you'll be lucky to be operating a hot dog stand
within six months....

>
>> Besides, any new TOS machine that makes Sinclap nervous - to the

>
>I guess the Atari 800 is not a Atari. I swore I used it everyday..

ahh, trying to compare a Milan with an Atari 800? Two very different
machines - that's like saying "I breathed on a Commodore 64 once,
therefore I'm an expert on Gateway's plans for the Amiga". Anyone who
would seriously try to compare an 800 with a Milan is dangerously
idiotic and should be kept away from any position in the computer
industry (except for sweeping the halls at Intel) Try again, weinerhead.

(No insult meant to all the nice Atari 800 users reading this :))

>
>The U.S. backed Canadian currency does not got far? Or maybe the U.S. Border
>Patrol has you on the undesirable alien list...

so not only did you flunk history, political science and geography,
you also got poor marks in economics. What did you do major in in
university, TIFKAS - "Baiting Feminists 101"? The problems with the

Canadian currency at the moment has more to do with Asian markets. Or
are you posting from an alternate universe (this explanation makes more
sense, as everything that TIFKAS says makes more sense if prefaced by
the disclaimer "In Bizarro World....")?

As for my own "undesirability", I happen to hold dual citizenship to
both the US and Canada, and have gone across the border twice in the
last year with no major incident - same as the fact that I've travelled
to the UK three times in the last three years, again with no incident.
The only reason that I'm unable to attend the Las Vegas show is due to
time constraints related to my job. Maybe a nice letter to DejaNews
complaining of slander to my character should cure you of that
embarrassing habit of not thinking before you post....

>

>Still a VP?

my,your insults are getting lamer and lamer - like I said, I was
re-elected by acclamation in May, and haven't gone for the president's
job as the current president is doing an excellent job - why ruin a
good thing :).

Just about as lame an insult as "you will be eating your spinach",
which is doubly stupid when you realize that a) I LOVE spinach, and b)
you keep posting this in newsgroups full of Popeyes. Honestly, like
Bluto you act tough but you go down with one punch when your stupidity
and lack of credibility reveals itself.....

You lost me right here Michael. You think that someone should not be able post bad content because it would hurt particular brands of computers? That is obsurd. I also read the rest of your letter and the only thing that I agree with is that Peter should not post advocacy in non-advocacy groups. This group, by charter, is dedicated to "...attacking and defending Atari computers..." and Peter has violated neither neither the spirit nor the letter of this charter. His "flames" and "mud slinging" have been mirrored by other posters and have been more personal in nature. The Atari advocates certainly do not have the moral high ground here.

BTW, he is certainly a moron who annoys people but that can hardly be helped.

Yes, Brian, I agree - we should leave poor Peter alone. He has enough problems knowing that Apple has just lost the US Navy and (something he doesn't know) my multi-national paper products corporation - who are not only stopping all purchases of Apple products, but attempting to dispose of the ones that they own - this is unofficial at the moment, but it's happening none-the-less. This is all probably just a plot by the Atari Jihad, and other Atari boobs... Why get 'personal' when you can insult everyone at once? Including citizens of a sovereign nation that he continues to claim is but a state of another nation?

BTW - is it just me, or has anyone else thought that the iMac looks like a 1940's Popular Mechanics' artists impression of what a 1970's vacuum cleaner would look like?

>nation?

as a citizen of the said sovereign nation, let me add that Sinclap
is obviously posting his flames to get attention - and my job is to
give Sinclap attention, but not necessarily the type he wants.
Seriously, he is in much need of psychiatric help and I hope that he
will come to realize that he needs to clean up his act and seek the
therapy he so obviously needs. Otherwise he may find himself nominated
as "Kook Of The Month" at alt.usenet.kooks .

From my end here in Canada, I am seeing a lot of Apple activity -
but not all of it good. Appland - a longtime Apple dealer and chain of
stores across Canada - just folded a few months ago, and the dealer
that's popped up in its place is running on a skeleton staff, very
little product on display, and no new software. The Computer Centre on
College and Spadina, which for the longest time was 50% Apple, 50% PC,
has now had PC stuff encroaching in the Apple department - more
software than the other store, but still nothing around the "12 30-foot
piles" that Sinclap claims. And I'd hate to see what's going on at
Computer City now that the idiots at CompUSA are taking over (you might
want to read the article at http://www.maccentral.com and find out -
seems that the $800 coupon book they're offering for pre-registering
the iMac has many products that can't be used on it). The only business
that's doing good is EduConnect at York University, and that's because
my brother's helping on the Mac side of things - he's everything a Mac
advocate SHOULD be and more, including being fair and honest and not
ridiculing one's choice of computer just because it's not the flavour
of the month.

>

Well, maybe it was to long winded and did not contain the proper
sentence structure to get my point across. You quoted a statement made
early in the letter, but go on to say you agree that he should keep
his post in the advocacy group. The post that are outside the advocacy
group is what caused me to express my opinion. The fact is that he
will carry an arguement to whatever extent he feels is necessary to
get a reply, even posting to the incorrect group, which he has. My
point is that a hand slap is not enough in his case and he should have
his user status at Dejanews revoked due to misuse.

>This group, by charter, is dedicated to "...attacking and defending Atari
>computers..." and Peter has violated neither neither the spirit nor the
>letter of this charter.

Peter uses the group for advertising purposes. Consider what you state
above, and tell me again that it is ok for Apple (he does represent
Apple does he not?) to plug ads for their machines in an Atari
newsgroup? Besides that point, how can someone honestly attack the Atari
platform with the limited experience he has with the product. 99% of
his post belong in the alt.rec atari group where the common thread
is "The Jag is crap" headders. The person is here in attempts to cause
discouragement among the active users that care to read his post.
Probably only one percent of the active users even bother, but the group
is daily seeing new users come fowared, and here is where the issue lays.
A good arguement, sure. Even some good mudslinging. But it belongs in the
advocacy group. And it would be nice if the person on the other end actually
had some knowledge of what he was attacking. He does not.

> His "flames" and "mud slinging" have been mirrored by

"Screw" the morals. It's been balls out here for a few years now. I
don't care if he sleeps with Sheep. You want to know my moral ground?
Since we're in the advocacy group where little kids don't belong, I
think he is a piece of shit. How is that for a cro-magnum 'tude?

If he could channel some of that into constructively advocating Apple
it would serve him well. As long as he continues his present course
all he gets from me are vague feelings of pity and a minor curiosity
as to how many shootings of Morton Downey, Jr. & Rush Limbaugh he
actually watched. Same repetitious, loud-mouthed foundationless,
blabbering employed by all three of them. Hardly worth taking action
against - although Michael did have some valid points IRT newcomers to
the Atari scene. Anyway - keep up the good work :)

Don't misinterpret me now - gloating was the farthest thing from my
mind when I mentioned Apple's dwindling base. I support them and hope
for them to succeed - just pointing out that the signs don't look
promising.

Maybe he should not be allowed to post to any group with *.atari.* in it
except this one? I wonder if Dejanews could enforce that... You know that if
he losses his Dejanews account he'll just start using a conventional
newsreader.

> Peter uses the group for advertising purposes. Consider what you state
> above, and tell me again that it is ok for Apple (he does represent

Actually, I think that he works for a retail company (CompUSA?) that sells
Macs and PCs.

> And it would be nice if the person on the other end actually
> had some knowledge of what he was attacking. He does not.

Looking for knowledge on the internet is probably a waste of time :-) I've
been having a discussion with a guy in another group for over a week and I
still can't seem to convince him that preemptive multitasking is better than
the cooperative multitasking used in the Mac OS. It is amazingly frustrating
but I think of myself a teacher of the ignorant masses (well not quite).

I don't have a problem with it. OTOH, I try not to violate netiquette by
attacking anyone personally. I believe that, except for Peter, I have only
failed once.

no misinterpretation intended - as a matter of fact, I don't gloat
over Apple's problems either. I do highly respect the Mac to the point
that I bought a used Powerbook a few weeks ago; I'm still quite
fascinated by how good it is and how it's going to help with the job I'm
in (I needed some sort of PDA I could take to trade shows to take notes,
as well as a portable Internet computer so I could do web searches for
my boss whenever a customer needed some info that's not quite available
from our end). The only things I've been critical of have been the way
the company has been run into the ground, the blown opportunites to make
the iMac REALLY attractive to the first-time buyer (that is, using
standard SCSI and printer ports so that they, not Apple, get to choose
what hooks up to it. That and Sinclap's constant obliviousness to the
facts and his bullying behaviour towards Atari users and
hardware/software developers and merchants (you'll notice he NEVER posts
to the mac.advocacy or comp.sys.mac) - certainly he'd like the
challenge of a REAL debate among his peers, especially those who really
posts the truth about Apple's situation.

I don't have a problem with him in this newsgroup, at least as far as
his rights are. I doubt that the letter I sent was even considered.
Most of the time ISP's simply say it looks like your group needs a
moderator........

Yea, he has brought me to skullduggery a few times and I couldn't resist,
but I try to refer to him in the third person whenever I can (even
to him).

He needs to say away from the .ST, .TECH, and .PRG Atari groups.
Unless he would like to use his wisdom with the Mac OS and start a

MagiC Mac help list. But that would require an effort. It is much
easier to just randomly look in newsgroups and type some stupid
statement.

Actualy I concentrated in the International Relations area of my Liberal Arts BA. I kind of miss the Foreign relations classes...as U.S. foreign policy, Middle East classes that had Palestanians and the Jewish students. Very entertaining, informative and relevance. Sorry no mention of Canada except that the U.S. Secretary State is considered the quasi Canadian representative - foreign minister. Why not close down the Canadian embassies for eficiency?

As for the Feminists...I was on some of their shit lists considering I vote democratic.

Slander of character? Get real..every post directed to me by you is slander. I just brush it off as banter. You all take this serious...I don't..

After a days work this is unwind therapy..Nothing more..

FYI: I hold a dual citizenship to both U.S. and UK.

Is you mother or father/either Canadian and American or vice versa?

Apple run into the ground? Were have you been in the last 12 months?

Apple is aware of the issues of leaving the old legacy ports and floppy out
of the imac. The imac is not for everyone thats why there continues to be
the G3 line. Apple did drop prices today. Their online store lists the G3
233 desktop at $1399 and the G3 233 Tower at $1499. Which is $100 and $200
above the cost of the imac. The current mgt is not stupid. Mitch Mandich
has done alot in the last year..Only if you knew the internal details..

You misunderstand. I was speaking conceptually.
Pointcast is an internet push client. It pushes
information to users in a fashion similar to TV
as opposed to a pull client like gopher or
archie or a web browser.

Pointcast is nothing to cry over wrt lack of support.

Although icq is slight nifty. If Sinclair weren't such
a moron he might have mentioned that instead. Icq (in
case you dont know) attempts to solve the ISP/dynamic
IP problem for net users.

The client is being reverse engineered and the results
should be available for use under any platfrom, including
the ST.

If it's a netclient worth bothering with, there is likely
some reverse engineering project who's work the Atari
community could take advantage of.

Well, with deep regret, I announce that it is offical. As of July 23, 1998, we the employees of the Naval Air Warfare Center, are no longer able to purchase desktop Apple computers for use within the DOD. I assume this to mean the Command, which includes Pt. Mugu, White Sands, Pax River and China Lake.

It's a shame as most people last year and part of this year were only just starting to replace old 603's and 604's with G3's. Only but a handful have current Apple machines.

On the plus side, this does leave the opertunity for new PC owners to install one of the many Atari emulators (not that MagiC Mac is bad at all) on their new desktop machines and run old Mac software with Gemulator.

It's kind of sorted, but it looks like the advocacy wars will be coming down to how many machines your platform can be emulated on, and not the release of the iMac.

2224. Milan update in the USA from GodFather Computer, Inc.

Newsgroup: comp.sys.atari.advocacy
Date: 1998-08-04 00:00:00 UTC
From: tj@oro.net
Message-ID: <tj-0408981615230001@i386.oro.net>
Source record: 4935

If you did not see our original message a couple weeks ago regarding the Milan, please read on and then send us an email so we can get you on our database. This way we can keep you posted if you are interested in buying a Milan in the USA... Email: tj@godfather.com

The staff at GodFather Computer, Inc. would like to thank all the folks who sent us an email regarding the possibility of distribution of the Milan Computer in the USA. We must say things are looking good thus far.

We have been told an english version will be available very soon and once this happens, our plans are to acquire one for testing purposes in our USA office. We want to make 100% sure this product is made well and that it performs as advertised.

Once we feel comfortable that the english version is solid, we will start to accept pre-orders for the Milan. Our goal is to locate as many USA customers as possible for this 1st order so we can all keep our freight costs down since shipping from Europe to USA is not always cheap.

Although the exact price has not been set, here are the initial specifications of the Milan system we will be selling for approx $899 (USD) plus freights (freights being from Europe to USA to your doorstop):

Milan Computer housed in the designer Milan style case, 16MB RAM, 800MB to 1.2GB HDD, 1.44MB FDD, Keyboard, Mouse, 2MB Video Card, Milan OS, a Milan revised TOS 4.x, and manual.

GodFather Computer also sells a great line of monitors and laser printers to companion with your new Milan. 14" monitors start at only $109, 15" at $139, 17" at $249, 19" at $549, and 21" at $919. Our Digiview and Decaview monitors come with a 3 year warranty and the Milan at this time comes with a one year warranty.

Again, these are only preliminary specifications but we expect the final cut to be fairly similar if not exact. The main goal is to continue letting you know of the progress being made on bringing the Milan to the USA.

As soon as all the above items are 100%, we will add the Milan information to our web pages and begin to accept pre-orders.

Thank you again for the interest in the Milan Computer.

2226. iMac's slow graphics card

Newsgroup: comp.sys.atari.advocacy
Date: 1998-08-05 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <35c7c044.0@diana.idirect.com>
Source record: 4937

well folks, it's another 11 days until the arrival of the iMac, the "revolutionary" new computer that will, in a CompUSA executive's words, "will make PC users switch to Mac".

But what's this rumbling going on in comp.sys.mac.advocacy? What's this hubbub of discontent?

Why, it's all due to the discovery that the iMac, with all its "innovations", handles its graphics duties using an ATI Rage II Graphics card - which is considered a dinosaur and quite slow at refreshing graphics. And while you can upgrade the RAM in it, you can't replace the card for a faster one. Another example of Apple "thinking different"? Of cutting costs? Or of once again proving their level of incompetence?

What happens to the consumer, six months down the road, when he gets a great new game and finds that he can't run it on his iMac because it crawls like a wounded snail? Does this mean that all the new developers that Apple has been boasting about will have to "dumb down" their neato new games? Will Eddie Punchclock be enraged when Lara Croft doesn't go through her moves as fast as Joe Lunchpail's PC which he bought for prices way below the iMac's $1299 US price AND can upgrade to faster video cards (as well as hooking up to industry-standard peripherals, which USB has yet to prove due to its dearth of on-sale-now peripherals). Will he ever consider buying Apple again?

My prediction: the iMac will do initially well (how can it not do well at first with all the drooling Mac fanboys wanting to have one of these on their desks?) only to suffer a severe slump due to the fact that the average consumer wasn't born yesterday and wants to make their own decisions on the computer they want for their household and not to let Apple make the decision for them. Honestly, this is shaping up to be potentially the biggest marketing disaster since New Coke.....

Of course, we in comp.sys.atari.advocacy want to hear the positive spin on this by TIFKAS (The Idiot Forever Known As Sinclap), our own resident MacDavidian. He's a man we can trust - he advised us that we could buy a discontinued UMAX Mac clone brand new for $100 US (the same price as a Nemesis card, folks!), that "90% of all TOS application software falls over on the Milan" (which should be of interest to the official dealer of the Milan computer in the US - kin you say "slander suit", boys and girls?) and his hilarious rantings that Canada is a US tributary (despite the fact that in 1812 Canada wiped the floor with the US Army at the Battle of Fort York - no wonder the US Navy decided to drop all purchases of Macs if their salespeople are obvious idiots despite their fancy college diplomas). And of course, his usual lame

insults to yours truly, like his classic "you will be eating your spinach" (had some last night, yum!) or his attempts to smear me as a "wimp" because I and the membership of TAF am satisfies with my performance as their VP and don't want to topple Ken MacDonald as pres. Hey at least my insults back get laughs.....

Any of them can be. That's the point. It will even be a
decent PnP bus as well, reliable at the bios level such
that even Linux can take advantage of it with out much
fuss.

>
>The imac is not for everyone. Thats why I have been holding seminars in my

That's the real trick. It's hard to tell just who this
machine is targeted to and if that group is more than
just a null set.

>2) Fairly cheap

'Fairly cheap' by mac standards. By current
PC standards it's rather overpriced. This
will be a considerable handicap for it as it
goes head to head with cheaper machines. A user
of this kind also will likely be served just as
well by putting NT on that bargain PC as to avoid
the nasty tendency of Win95/95 to eat itself.

If the machine were priced more in line with what
it's non-motherboard components cost and came in
a better case and included some other generally
useful components that cost in the $25-$50 range
(for the aforementioned bargain PCs) I would be
less inclined to heckle it.

>3) Requires little in the way of maintenance
>
>The iMac seems to fit that category fairly well. The only thing that hurts it
>in it's target market is, IMHO, the lack of quality games and the price.

Cheezing out on the $25 floppy & $50 SCSI interface
certainly doesn't help either.

The imac does not have a slow graphics card. I saw the imac in Cupertino
recently and its not slow..

The G3 pro line does not include a monitor but does include keyboard/mouse.
Tomb Raider and Quake will run fine on the imac.

People may decide they want to get a G3 pro model because the price has come down, I neeed that 17' monitor, slots and floppy.

Or I already have a monitor at home and that this G3 233 desktop or mini tower is better suited for my needs.

Apple is not making the decision for them. You need to work on your research facts. If the imac was the sole model, you would have an argument.

I just did not want to repeat myself to the same question. Apple has not yet derived any benefit from closure of the clone business according to Apple's CFO.

Apple has had significant earnings in the last three Q's. Must be the slow news travel to our territory up north. My neighbor to the south must have advance news gathering technology.

Apple is goiving the consumer what they want... The inexpensive imac consumer model and the low price G3 pro line.

2232. Interested in Atari (Mac User)

Newsgroup: comp.sys.atari.advocacy
Date: 1998-08-06 00:00:00 UTC
From: xanathus@aol.com
Message-ID: <1998080616151500.MAA25955@ladder03.news.aol.com>
Source record: 4802

I have been a Mac user for about five years. I do, however, use PC's quite often. I currently own a Quadra 660AV, a IIcx, and an upgraded IIcx (with an '040), and an SE. Every one of these machines is used daily.

I admit that I don't know anything about current Atari systems. That is why I subscribed to this newsgroup. I loved Atari years ago. If it is still around, I want to know about it.

For the time being, my main use for computers is graphic design. Lots of that is web site design. I'll be the first to admit that alot of sites that say "Made on a Mac", are horrible sights to behold. My only explaination is this... These people have the tools to do it, but don't have the education behind it to make it effective. It is sad.

A friend of mine recently bought a Dell 400MHz Pentium II. For games, it is alot faster than my Mac Quadra. (50/25MHz '040) But when it comes to web browsing and other internet use, my Mac outpaces his PC in almost every aspect. This is especially surprising when you consider that my Mac only has a 28.8Kbps modem compared to his 56K modem. Go figure.

As for this discussion about the iMac, I agree with those of you who don't like it. Personally, I think that the all-in-one computer is a thing of the past. The current thing nowadays is upgradability. I think that the iMac is a huge mistake by Apple. I am surprised that there is so much anticipation for it. I mean... who cares? If anyone wants power and expandability, go for a modular computer.

Personally, I don't focus on the speed of the computer. I bought my first Mac because I liked the interface. To this day, I like it better than Windows (3.1, 95, 98, NT). When it comes to PCs, I am more comfortable using DOS. I would be very interested in seeing an Atari machine. (Or Milan? I really don't know anything about it.)

Just finding out that there is a computer that still uses an 040 chip intrigues me. It sort of makes me feel warm and fuzzy inside, knowing that my machine isn't really so out-dated after all.

Sincerely,
John G.

Considering the realative quality of the rest of the components
in an iMac, a celery system is an appropriate comparison. While
it is true that it may not be a better number cruncher, that
really wont matter as the rest of the iMac isn't set up to
handle such tasks anyway.

The CPU performace defecit is of no practical consequence.

That's why they will let the store that sells them the 3D
accellerator do it for them. Like always, they'll still end
up ahead in terms of price relativel to Apple.

2M graphic cards are strictly bargain basement territory.
Considering that Apple is too ashamed to mention just what
2D/3D chip they're using, it's a safe bet it's an S3 Virge
or somesuch (all you informed types know that that means).

Depending on the needs of the user, software availablity
due to current monopoly forming market dynamics excepted,
an 040 mac would be just as suitable.

Although, oddly enough, it may be easier to find software
for the the ST.

Mind you, I would love disproof on this point as there is
a relatively nice 040 Mac emulator for DOS/Win/Linux.

Maybe not because getting support if you screw anything up will be pretty
tough. Also, you may have file interchange issues that you are not savvy
enough to deal with.

You can't buy a cheap computer and play the latest games. That applies to PCs as well. I have a PII-400 and a Velocity 128 AGP video card and I can't play all the greatest games. One of my favorite games is BattleZone and I downloaded an updater for it yesterday. Unfortunately, I had to turn off a quality option because my system wasn't able to handle the larger textures. There are also games that require a Voodoo card and, I'm sure, some will soon require a Voodoo II card. And I paid $3000US for my computer just three months ago.

My sister would never add a SCSI device. She is also a doctoral student so
she would be fine using the network instead of a floppy drive. I also think
that if she needed removable storage then a floppy wouldn't cut it anyway.

This is what Gene Steiberg has said about his imac loaner unit.

http://www.azcentral.com/computing/news/mac/steinberg.shtml
Read it and weap!

'The 15-inch color screen is sharp and clear, and the built
in video acceleration chip makes screen display speedy,
almost instantaneous, very much like the big monitors
with high speed graphic accelerators you see in large art
departments. There are stereo speakers that provide fake
SRS surround sound with decent quality.'

Still, it's a trivial piece of hardware in terms of cost
& complexity that adds rather secure, simple & ubiquitous
data transfer. It's one of those things that often seems
pointless a great deal of the time but is quite useful in
those rare instances.

How many of those sub grand wintel boxes are upgraded with new graphic cards?

The imac is not for everyone. Thats why I have been holding seminars in my
Comp stores for the last two weeks to educate the store folks on how
differentiate the imac and the G3 pro line to customer needs. Apple has
reduced pricing of the G3 Pro line. The starting price is $1399 for the G3
233 desktop which is only $100 more than imac.

I never stated that the Umax clones were priced at $100. If it was posted
that way than it was a typo. You can get close out S900's below $900 fully
loaded. Much more of a value than the Milan. I am shocked that 800MB HD's
are still available.

I doubt that this group is the null set. If my sister was in the market for a new computer then I would consider recommending the iMac to her. She has had her current computer for about four years. She has never added more RAM, changed monitors, added any peripherals, etc. You have to remember that a lot of people have very limited needs. They want a computer that is:

1) Easy to use
2) Fairly cheap
3) Requires little in the way of maintenance

The iMac seems to fit that category fairly well. The only thing that hurts it in it's target market is, IMHO, the lack of quality games and the price.

maybe you should go to the PC section of your CompUSA stores and
find out. Judging from your posts at The Mac Doomsday Clock, you're
just as clueless on PC systems as you are on passing judgement on Atari
systems.

ahh, that's so funny - I believe that Steve Jobs made it clear that
the iMac was designed as a household computer and for the first-time

computer user, and designed for ease of use - I would imagine that that would be designated for "everyone". Why is Apple then pushing games on the iMac (which will be the first to suffer under the iMac's slow graphics card)? Turning around and saying that the iMac is "not for everyone" is an interesting about-face, and smacks of the elitism found amongst MacDavidians such as yourself.

And as for the G3 desktop - does that $1399 US include a monitor? Cause if it doesn't, that adds at least another $300. Does it include a printer? Does Apple still charge extra for a keyboard and mouse on top of that price. Plus, IMHO, the customer who comes in expecting to buy an iMac, is told "no, Tomb Raider and Quake won't run on it, but I've got this nice G3 system that will" will look to John Q. CompNewbie like the classic bait and switch - and he will immediately go to the PC section of your own store to buy a PC that WILL run what HE wants on it. Lame lame lame - with that attitude, the only Macs you'll be selling in six months come with cheese.

>In your slimy dreams...Read above again.

My my, ran out of arguments, so going to ad hominen attacks again. I must really be getting under your skin if I've been asking some really pointed questions. I read the above, and see that you're still living in Bizarro World as usual. My thoughts are based on the fact that every time Apple comes out with a new product, the majority of them are sold to the drooling fanboys, and precious little to PC users switching over. The only reason Apple is increasing sales is the fact that they don't have the clone makers eating into their own margins around any more (and we know how Apple screwed over UMAX, Motorola and Power Computing to become king of the pond again, don't we). This is desparate times for Apple, and they know it (they even admit in papers to the Federal Trade Commission that they're not expecting to run significant profit for the next six months. With the US Navy having dumped the Mac, and Kinkos planning to do so, this is yet another slap in the face to Apple. And flawed boxes are not going to turn around a sinking ship until Apple wises up and gives the consumer what THEY want, not what Apple dictates what they can handle.

Hey remember the last time someone came out with a computer which was self-contained and had no floppy drive? The NeXT, I believe it was called. The designer? Steve Jobs. Certainly don't see too many of

those around, do you :).

>I never stated that the Umax clones were priced at $100. If it was posted
>that way than it was a typo. You can get close out S900's below $900 fully
>loaded. Much more of a value than the Milan. I am shocked that 800MB HD's
>are still available.

well, you should do your homework before you open your big yap,
TIFKAS - you told a Falcon user that he could buy a UMAX clone for the
same price of a Nemesis board, which is $100 US - it's not so much a
typo as it is yet another example of your disinformation and
unsuitability to work in anything other than janitorial work (where your
level of incompetence starts). You should also have checked out
Godfather Computer's post about their proposed carrying of the Milan - I
believe the system now offers a 1.2 gig IDE drive (which are plentiful)
and 16MB RAM onboard (up from 8), plenty to run the Milan's version of
TOS (which isn't as bloated a memory pig as OS 8.1, and can run at
impressive speed under the "obsolete 040") and all at the same $899 US
proposed price point as was stated six months ago by Milan gmbH - I'd
say that's added value, and you'll be getting much more support from
Milan than you will from Apple on your bargain bin UMAX. And at least I
can plug industry standard peripherals and PCI cards into it (and with a
standard floppy drive), unlike your iMac, which is looking more and more
like a candidate for the dumpster every time I see those specs of
its.....

here's a post from comp.sys.mac.advocacy (you know, the place
TIFKAS is too afraid to tread) showing why the iMac's puny graphics
card may be its (and Apple's) own undoing. It's very well written, and
pretty eloquent in its thoughts.

Actually, nearly everyone who's an avid gamer bought a PC a long time ago.
But having lost that market, are you saying Apple shouldn't even try to
get it back? They've lost overall market share too but you're gung ho on
them getting that back. Why would games be different?

> The people who claimed that RageII is going to prevent the iMac's success

> get any more serious gamers? I doubt it. They're going to want a couple of
> slots for whatever's available in 1999 and 2000.

You're right and that's not what I'm talking about. I'm talking about
"causal" and "intermediate" gamers, and people who don't even think of
themselves as gamers. The "3D revolution" is starting to bcome huge, and
iMac users will simply be left out. If iMac constituts a significant
portion of Mac sales, that leaves a big chunk of the Mac market out too.
I'm more concerned with those casual users who simply aren't aware any of
this is happening (a level of ignorance that most people including
yourself share). Another thing is I know a ton of people (including
myself) who were never terribly serious gamers before--I'm 30, I've never
had a Nintendo or anything and practically never went into an arcade
before, and only played computer games occasionally in the past. But now
some games are compelling enough that I've started playing them a lot.
Because I happen to have PCI slots I was able to add a 3Dfx card, which
dramatically improved the gameplay experience in several different games
(and positions me for many games coming out soon). If my computer had Rage
Pro to begin with, that would probably be sufficient for the time being
(it's only a little less powerful than 3Dfx Voodoo Graphics).

> So, I'm of the opinion that faster graphics would not help iMac sales all
> that much. Until someone comes up with some evidence refuting that,
> they're just speculating.

Again, it's not really the initial sales that I'm worried about (though I
do think that good 3D demos can be _very_ impressive and gain a fair
number of sales, especially for a computer like the iMac which depends so
much on image to sell itself...a lot of people would see that as a way to
avoid buying a separate console to play games on, or a way to make
everyone in the family happy) I'm really more worried about a million
people buying it, and say 100,000 of them trying to play some top-selling
game this holiday season, and finding that, if it runs at all, it _sucks_
on the iMac, and they'll start asking questions about what's wrong (they
won't know it's the Rage II until someone tells them Apple sold them a
lemon...). And the only reason that might not happen would be if we're
still only getting 1-2 year-old games this holiday season instead of new
ones...

Also, it affects the actual chances these "hot" 3D games will get ported in the first place. Some game which requires a 3Dfx-level 3D card, and won't run on the iMac, can only be sold into a much smaller proportion of the Mac market. Paradoxically, if a million people buy iMacs that otherwise would have bought expandable G3 PowerMacs (which already have Rage Pro built in and can easily add Voodoo 2 or whatever), that's 1 million _fewer_ people to potentially sell such a game to, in a market that's already marginal in size. At the same time the iMac is "expanding" the Mac market overall, it could actually be shrinking some important segments.

>
> I _have_ consistently asked you to prove that the number of people who
> demand high frame rates is significant. You've never done so.

That argument is pure sophistry, and you know it. The point is not high frames rates for "Quake", but the level of sophistication the iMac allows for today's games, and more importantly, tomorrow's games. They are not just "blood and guts" games, but flight simulators, 3D Sports Game (Golf), RPGs like Riven, educational games (ex: VR tour of the Titanic), etc.

But just for laughs, here's a stat for you: GameSpy, which searches for Internet servers for Internet Quake, has had over 1 million registrations. That's ONE game, and only counts people interested in Multiplayer (which is a small part of Quake sales).

Answer this question, which is actually answerable: Do you take issue that games are a significant part of the consumer market? And if so, play your own game and supply some figures to back that up. My evidence: The game rack at my local Fry's is about 1/3 of the entire software department.

And then tell me why, if games are an insignificant part of the consumer market, Steve Jobs cares about it?

Maybe in your world there is no room for fun, but in my world I'm telling you that it's very likely the lack of decent games is going to kill the idea of an iMac in my house. You can fool the adults, but you can't fool the kids.

Why can't you show some credibility and just admit that Apple screwed up? And I notice that you are afraid to answer my other key question, so I'll answer for you: The path to relevence for Apple is for the Mac community to show "tough love" and kick their butt until they get it right. The iMac does not deserve our loyalty and deserves to go down in flames. The iMac 2, now, maybe they'll get it right.

Grandmaster Bubba

This isn't something occasional. We both connect to the same web sites frequently. When I say that my computer "outpaces" his PC, it is only a slight advantage. If a page takes 20 seconds to load on his computer, it takes about 16 on mine. This may not sound like much, but his PC is (technically) 8 times the speed of mine, with a modem that is twice the speed of mine. I can't get over it.

>Maybe your friend is not acheiving 56K connections?

It says 57,200 bps (or some similar number) when it connects. And in the
browser window, I've seen transfer rates of 6KB/sec. That seems about right.

My Mac connects at 28, 800 bps. The usual transfer rate in Netscape is
3KB/sec. But it occasionally jumps up to 4 or 5. On several occasions, it
even reached 7KB/sec. And I am sure that these are not loading from the disk
cache. (I delete it often.)

Nonetheless... I am always shocked that his computer isn't faster than mine.
It just doesn't make sense.

When you say that the IBM Ambra has more software available... you mean games,

Now here is a key word. "Almost". How close is almost? My ATI Mach 64 seems pretty damn quick too. On a six year old machine at that. Image that:).

> very much like the big monitors

"Very much like". As in a VW bug is almost like an old Speedster?

> with high speed graphic accelerators you see in large art
> departments.

"Large art departments"? When I walked into my sons art class, I thought it was pretty big too. Did he say they were using Degas for their layout?

> There are stereo speakers that provide fake
> SRS surround sound with decent quality.'

K-Mart sells stereos with "decent" quality, even with their company logo on front. Does it have 16 mono or 8 stereo output? Does it have an optical digital IO? Does it have SMPTE?

To be honest, it reminds me of some sort of diving helmet off a B SciFi flick.

2263. Is Apple Really That Healthy? A Sober Second Look

Newsgroup: comp.sys.atari.advocacy
Date: 1998-08-07 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <35caf154.0@diana.idirect.com>
Source record: 4824

For months now, TIFKAS has been trumpeting up and down that Apple Computer has never been healthier. And yes, in light of its impressive past three quarters, it sure seems that Steve Jobs has actually turned the company around.

However, the numbers may not be all that they seem - and Apple may well still be in dire financial straits, and they know it. Which is why the iMac may be their last gasp.

To show that I Am Not Making This Up, go to http://www.macintouch.com/norr021.html and get the rest of the story (complete with large colourful graphs that even TIFKAS can comprehend).

The numbers don't lie!

2264. even Mac users have their doubts about iMac

Newsgroup: comp.sys.atari.advocacy
Date: 1998-08-07 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <35caf3a3.0@diana.idirect.com>
Source record: 4825

The "revolutionary" iMac certainly has the attention of the popular computer press. After all, this "everyman's computer" certainly sounds impressive on the surface with its 233mHZ processor, built-in Ethernet and all-in-one design.

However, one Mac user came home from Cupertino and gave it some sober second thought - and decides he doubts the iMac will really change Apple's fortunes. He especially is concerned about no floppy drive and no standard printer port (things that mindless Mac cheerleaders like TIFKAS tend to shrug off or gloss over as "not being important").

Interested in reading this other side of the coin from a dedicated Mac user? Go to http://www.macintouch.com/imac2.html - it's a very well-written article, with some insightful thoughts and concerns.

Guys like TIFKAS should just read their Little Golden Books, as the content of this site may make them physically ill......

2265. new iMac flaw - upgrade memory, lose warranty

Newsgroup: comp.sys.atari.advocacy
Date: 1998-08-07 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <35caefb7.0@diana.idirect.com>
Source record: 4826

The "revolutionary" iMac comes complete with 32 mB DIMM RAM as standard.
But what if the Mac power user (and believe me, there will be lots of
Mac fanboys buying this thing) want to go to its full 128mB capacity?

Well, unfortunately, they'll do so and lose their one-year warranty
too! Seems in order to install the RAM, they'll have to remove the
processor card - and incur the wrath of Jobs. Poor design, bad thought.

Don't believe me? Go to http://www.macintouch.com and check it out!

Who's crying now, TIFKAS?

I don't see why a power user would buy this computer. I consider myself a power user and I'd want: more RAM expansion, PCI slots, a floppy drive, a zip drive, a 19" monitor, a DVD-ROM, some internal disk bays, etc. Therefore, I'd never even consider getting an iMac. I'd also never get a laptop. Both are not targetted towards me.

You said "So what" when I stated that the Mac OS is easier to use. I explained why I thought that this was a relevant point. Now you are challenging my original assertion. Why didn't you do that when I first brought it up?

I haven't commisioned any studies to support my position that the Mac OS is easier to use than Windows but I am a consumer so my perception of a product is relevant.

> A zip drive would not have quite as trivial a cost associated
> with it & would be a distinctly different engineering question.

I agree. But if I were to buy a Mac, I would not want it to have a floppy drive. The small increase in expense would not be justified by any increase in utility.

I would say that a power user would be just about anyone who would crave getting the most performance out of any computer; the fact that the iMac is expandable RAM-wise shows that Apple anticipates that existing Mac owners will want this machine and will want to take it to its next level. Besides, in order to make use of the bloated OS8 more efficiently (and run programs with it) you really have to bring up the RAM to a more "acceptable" level (and I know of what I speak - my brother installed 64 megs in his PowerMac in order to make the most of having OS8 installed on his system - it is a neat operating system with some interesting ways of accessing the desktop and the drives, but does an operating system REALLY require that much RAM and hard drive space?).

The big problem, of course, is what happens when the RAM is needed - and now? Apple built a door on the iMac so that the RAM could be accessed for swapping for bigger RAM - this implies that a user could easily do the swap himself. But if he does it himself and wants to go to the full nine yards, he kisses his warranty goodbye. I'm sure TIFKAS will argue that his authorized Apple service centre can do it for the customer, but remember that Apple, in its cost-cutting measures to stay afloat, has slashed the number of service centres - for someone in Chicago or Toronto, that won't be a problem, but what about the guy in Boogie, Iowa who ordered his iMac straight through Apple via mail order (remember, TIFKAS pooh-poohed this scenario as a non-issue when it was brought up in this forum a few months ago)? And why have a middle man install the RAM when Apple has a door on the computer that implies that the user can do it himself?

Besides - if it's not anticipated as a power user's system, then
why the heck did Apple put an Ethernet card in it? How many average
households (the place where Apple hopes to sell the majority of its
iMacs) have more than one computer capable of accessing Ethernet? How
many households could afford an Ethernet connection to the Internet? Apple
could have easily eliminated this bit of tomfoolery and added a nice
standard SCSI interface or a floppy drive to it and made the iMac even
more palatable to the average home user - instead, it comes across as
more a project built by fanboys for fanboys, and will most likely be
sold only to fanboys - the usual state of affairs that is sadly been
the pattern for any Apple product.

It'll run fine, but of course it won't be up to the quality
you'll get with a PII/300, which costs lots more than the iMac.
The iMac is really useless for the hardcore gamer, the one that
will want Tomb Raider to run at its best. For the casual user, it'll work
just fine. The hardcore gamer is better off with a Playstation anyway.

I'm don't think that the iMac's RAM expandibility supports your claim "...that
existing Mac ownwers will want this machine..." Some Mac users might want an
iMac but, IMHO, most won't.

> ... - it is a neat operating system with
> some interesting ways of accessing the desktop and the drives, but does

That depends of the operating system and what you want to do. Using an SGI
with less than 128MB or RAM can be painful. NeXTStep performed best with
>32MB RAM.

If you are a naive user than getting your RAM installed by a technition
probably won't be that bit of a deal. In fact, a lot of these users wouldn't
feel comfortable installing RAM themselves anyway.

Schools are part of the iMacs target market and they tend to have Ethernet networks. So do college dorms. And cable modems require an Ethernet card. What large value do you think that the naive user will associate with SCSI? Don't you know people who have never upgraded their computer? I think that the iMac is targetted towards them.

I'm don't think that the iMac's RAM expandibility supports your claim "...that existing Mac ownwers will want this machine..." Some Mac users might want an iMac but, IMHO, most won't.

> ... - it is a neat operating system with
> some interesting ways of accessing the desktop and the drives, but does

That depends of the operating system and what you want to do. Using an SGI with less than 128MB or RAM can be painful. NeXTStep performed best with >32MB RAM. NT4 needs 64MB or RAM to perform well. I'll probably upgrade my RAM to 128MB to run NT5.

If you are a naive user than getting your RAM installed by a technition probably won't be that bit of a deal. In fact, a lot of these users wouldn't feel comfortable installing RAM themselves anyway.

Schools are part of the iMacs target market and they tend to have Ethernet networks. So do college dorms. And cable modems require an Ethernet card. What large value do you think that the naive user will associate with SCSI? Don't you know people who have never upgraded their computer? I think that the iMac is targetted towards them.

Yes, it does...
>
Computer speed has little effect on browsing speed.
A 56K modem will only operate at a 'safe' speed, which is tested
continuously, and the connection speed of 56k is only the maximum transfer
speed attainable, which is practically impossible unless you have a short
and perfect line to your ISP.

The real determinate factor is the server speed and line quality.
The only fair comparison between two machines is if you both use the same
ISP, and from the same location, and at the same time.
All these factors play a role, and the relative speed of machines has
little impact.When browsing the web on my 486DX4/100 , with a 56k modem or
P166 with the same 56k modem, speed is practically identical.

Regards,

Clockmeister.

Some will likely get a ram upgrade, most will be content with virtual memory
on.

Whats the issue here? Gasping at straws here arn't you...

Me thinks your crying over spilled milk here. As for support in Iowa is
further from the truth. Their is a CompUSA in Clive plus countless Apple
store front dealers all over the state. All accessible by nice interstate
highways...

However, there will be at least 50+ new CompUSA stores in the comming months
due to the acquisition of Computer City(110 stores). I am dreading this
because my plate is full anyways. Maybe I can pick up the CompUSA territiory
in Canada, USA.

Nice Try..

Because Apple is going to sell lots to higher education students who most likely will have ethernet hookup in the dorm room...thats why. Also many communities down south here are being hooked up with Cable modem access. Here in Garland, Texas..plus other Texas communities...TCI Cable offers cable modem services for $40 month which includes email. I am tempted...

Numbers don't lie its just how you look at it. Apple has clearly shrunk in
size. However, in the past year they have gotten their financial house in
order such as growing their cash on hand to $2 billion and three profitable
Q's. The balance sheet doesn't lie.

We read the same SEC document? In every SEC document for legal reasons dire
uncertainties are included.

As for Apple cutting to the bone is farther from the truth. Apple will
release the imac this week plus updates to the G3 pro line soon according to
various news outlets if you believe them. Apple has hardware/software
roadmap going forward. Plus earnings amd revenues will grow by Q1/99 due to
imac and new stuff..

yep, and as usual using his same old techniques of outright lies, gross exaggeration and ignoring the real issues. Imagine that - ONE person posts he's selling off his Atari equipment, and TIFKAS immediately declares the entire Atari MIDI scene dead and buried - same as he claimed that "many Atari users can't get CAB working, so it's an inadequate web tool", when it was actually a handful (and many of them just needed to make minor adjustments - hypocritical when you find that TIFKAS posts his usual drivel with a news service that is rapidly being identified as a refuge for the computationally clueless a la AOL rather than take the time (a matter of minutes! as I have proven with my PowerBook) to set up a proper newsreader....)

hey, TIFKAS - I've been to England, and I found the exact opposite of what you're claiming, with much demand for "old, archaic" Atari systems and software - and at a price much less than your precious G3s. Same here in Canada - nice, sovereign, non-US-territory Canada. And if the Atari MIDI scene is indeed "dead and buried", why then is A) Electronic Cow, a new MIDI Atari software developer, doing so well, and B) Steinberg is considering re-entering the TOS MIDI market in Europe on the strength of the Milan architecture (which you also stupidly tried to smear with your claim that "90% of all TOS application software" falls over).

And while we're on the subject - you claim that Apple is sound financially by claiming that they have a $2 Billion reserve. My question on that is a) where and when did Apple find $2 Billion, and B) if Apple has had this amount of money lying around, then why the heck did they require Microsoft to give them a $150 million loan to keep them afloat a year ago? Indeed, the figures I showed at macintouch.com (a site that I trust over your often overstated "facts") I believe shows the true precarious position Apple finds itself in.......

Yea right!

Apple just announced today that over 150,000 imacs have been preordered with in one week and that 467 new peripherals and software have been announced since the imac intro on May 6.

To report a sinclap sighting, I will be in Albuquerque, NM at CompUSA from 8/11- 8/13.

Don't go saying that OS 8 is bloated. Sure it takes more memory than previous Systems on the Mac, but it's relatively low on memory usage for a current operating system.

Have you taken a look at how much memory Win95 uses? OS 8 is taking up around 8MB of RAM on my Mac. From what I hear, Win95 uses a minimum of 16MB!

Good point. Cable modems are expensive, and not available in all areas yet. It won't be for another year or so until my town gets cable modem access. And even still.... I don't subscribe to cable.

As for networking... Households DON'T need ethernet at all. If anything, it should only be an option. So I agree with you fully.

The iMac doesn't come with a floppy, but one can be added via its USB
port. Apple and a few other third party companies are making varioius
different kinds of floppies.

Zip
LS120
normal 1.44

But I did kind of funny that every time Steve jobs has direct control
over the design of a pc...he doesn't create floppies for it in its first
incarnation.

It was a year or so before the NeXT line started getting 2.88 floppies.
One could argue though that a floppy was useless on that machine.

I was a unix machine after all. You don't install the OS or apps with
floppies on unix machines, you'd get them over the network or on cdrom.
Transferring files you again use the network or the floptical drive.

The only people who complained about the floppy thing were people who
were used to using smaller computers, and just couldn't grasp the idea of
using computers that didn't have floppies because the files you move
around were way bigger then a floppy could handle.

I have a few machines around here that I've built that I didn't install
floppies. I just do all my work over the network.

This is why the iMac doesn't come with a floppy. They expected the user
to decide if he needed one, and if he did, then he could choose from a
number of different kinds from different sources.

Makes sense to me. I like to have choices.

>since the imac intro on May 6.

unfortunately, there are also reports that a number of Apple dealers are now scaling back their originally grandiose promotions of the iMac due to not having enough product. Indeed, it's especially interesting to note that CompUSA itself has bungled its own promotion of the iMac to the point that not only were they caught giving out coupon books (used as an incentive to leave hefty deposits for iMacs) which contained coupons for products unsuitable for the iMac, they've now also had the dubious distinction of not having the iMac mentioned in their most recent flyer!

Apple themselves will not be putting iMac on sale on their Apple mail-order store until Oct 1st.

intrigued? Check out http://www.infoxczar.com/atat.

As for the "467 new peripherals and software" - a large amount of vapourware is nothing to brag about. No Imation Superdrive yet, no ZIP available now, not even an outboard floppy drive - what happens if they have a hard drive crash, TIFKAS? 467 new peripherals and software available NOW would be much more impressive.

And as for the floppy being "dead", why is Apple putting floppy drives on their student model? (I just saw it yesterday and was quite impressed). Isn't the floppyless iMac being promoted as an education machine for homes and for people at college?

>
>To report a sinclap sighting, I will be in Albuquerque, NM at CompUSA from
>8/11- 8/13.
>
yep, the authorities will be contacted immediately - to save you from the hordes of angry torch-wielding customers who are sick of your slick drivel. Guess the old barrow-boy will then try to flee to Canada, where he'll get a nice reception at the border ("why HELLO, Mr. 'Canada is a US Tributary'!).....

No they had several models. Two case styles, the cube or the slab. 4
speed ranges 030 and 040 in 25 or 33mhz speeds. Then the last choice was
color board or grey scale.

They weren't so much models as option packages based on the two case
styles.

But they had floppies soon after introduction.

Guys a 233mhz G3 chip is twice as fast as a Pentium II 233 with 512K
cache. So its going to be even faster then twice as fast compared to a
celeron.

Ashamed? The chipset is an Ati Rage pro just like in other apple models.

This statement is completely false. The "...up to twice as fast..." comes from a single Bytemark score. If you take the composite of all the scores, the number is about 40% faster. If you use a decent compiler for the Pentium then the difference is even smaller. Also, Bytemarks only measure processor speed. They don't stress the memory system which is important in determining actual machine speed. PCs have faster buses and a better memory architechture than Macs.

> Ashamed? The chipset is an Ati Rage pro just like in other apple models.

The Rage Pro is crap. It was reasonably good about two years ago but two years is a long time in the computer world.

Can you tell me how I will get my work to school? Do I have to buy an ethernet
card for my home computer and install a WAN link between me and my school? Or
should I just put it on a floppy and use sneakernet?
Oh, wait, it's not as though I have much choice on the iMac.

I hadn't considered that possibility. I was thinking that they didn't include a floppy drive because floppies are essentially useless for information exchange. Ethernet is useful when you use your computer in a LAN environment, want to connect to high-speed devices (probably not useful for most iMac users) and people who have cable modems.

> That is quite a lot for an operating system, even in our days of cheap RAM.

I guess that depends on your perspective.

> Can you tell me how I will get my work to school? Do I have to buy an Ethernet

If you were living on campus then you would just connect your iMac to the campus LAN. If you live elsewhere then you can use a cable modem. If you don't have cable access in your area then you can dial into your campus network. Transferring 1.44MB over a modem should take under 5 minutes. If you need to transfer over 3MB of data then floppies are useless anyway. So what files are too big to transfer by modem but small enough to transfer by floppy? And if you deal with these files a lot then you can always by a floppy drive, superdrive (if you need floppy compatibility) or a Zip drive.

I can understand some of the lopsided reasoning here. Why don't we
just carry it further? From now on, let us just build houses with no
mailboxes and make postal service something that we have to pay extra
for. After all, everyone has email - or at least more people have
email than have cable modems or a LAN. Broadcast television? Sheesh,
from now on lets save a few bucks and leave out RF capability - people
can only use our televisions with cable and satellite systems - of
course, if they insist on using that old broadcast technology, we have
this handy-dandy little adapter that they can purchase at a 1300%
markup. You mean you actually want a compact cassette player in that
$700 stereo you just bought? Get real. Look - It has DAT and CD
capability, why in the world would you want to use a cassette?

Sheesh

You need to look at 3Q balance sheet. Apple created the cash by selling off inventory, reduce inventory on hand with more turns and reduce accounts recievables.

Microsoft bought $150 million worth of Apple shares on the open market. Wasn't a loan - did not need the cash- but a committment to the mac platform with new apps. It worked and brought in new developers.

2308. It's Official - USB ZIP vapour 'til Jan. 1999

Newsgroup: comp.sys.atari.advocacy
Date: 1998-08-12 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <35d128c6.0@diana.idirect.com>
Source record: 4769

hello there, iMac fans (and especially its main proponent here, The Idiot Forever Known As Sinclap).....

I just got back from an interesting session at a Mac user group tonight that featured a presentation by Argyle & Broadstreet, who represent Iomega products for Canada, where they talked about and showed a number of Iomega's drives and backup units (many of which, BTW, will work on Atari STs with the proper host adaptors and driver software), among other things.

Well, inevitably, since it was only four days until the launch of the "revolutionary" iMac, someone in the club interested in buying one asked when the USB version of their popular ZIP drive will be available for sale, as he needed this format for backup and for file transfer.

With unflinching candor, the presenter admitted that the USB ZIP was not ready for the August 15th launch of the iMac; indeed, he admitted that Iomega hopes to have the new version of the drive ready by - get this - Christmas 1998: and more likely by the beginning of first quarter 1999 (read: January).

With the ZIP considered perhaps the eventual replacement for the floppy disk, with it used by millions of users for transferring work to their business or for hard drive backup, the lack of a timely appearance of a USB ZIP could well be the deciding factor over whether John Q. ComputerNewbie buys a PC or the "revolutionary" iMac. Thanks to the developers at Apple wanting to impress drooling Mac fanboys rather than stick to existing standards (like installing a SCSI interface so that a user could connect the plentiful SCSI version of the ZIP or ZIP Plus, or even installing an internal ZIP - now that would have been truly revolutionary!), all those who bought an iMac with their carefully saved pennies at launch will now find their systems closed boxes when it comes to transferring work stuff, for transferring school stuff, for doing important backups in case of a hard drive crash, etc. At least until January 1999.

Looks like TIFKAS has some 'splainin' to do when he faces all those angry iMac customers at his CompUSA stores - and he'd better hope iMation is faster at coming up with a (temporary) solution until a USB ZIP is available, as an irate computer user who can't transfer or back up important stuff aren't going to take his glib assurances (or suggestions they buy a more expensive G3 tower system) that everything will be all right....

(To be fair to Iomega, the rep explained that their late USB development came about as a result of Apple adopting it late in the game for the iMac; Iomega does not take Windows '98 as a serious USB platform, as he said that there are still many bugs with its recognition of the devices <like scanners :) >)

also to allay fears of Mac users wanting to upgrade to iMac who have peripherals they've poured mucho money into, the rep mentioned that Asante is coming out in ten days with an Ethernet adaptor that will allow LocalPort printers to hook up to the iMac, and that Hewlett-Packard will be coming out with a box that will allow parallel printers (the long-time proven standard in the PC world) to be hooked up via USB. While welcome news, it still represents an additional expense to those who want to buy an iMac - and could have been prevented had Apple and Steve Jobs used more common sense and less gee-whillikers-dudes in designing the "perfect home computer". Sorry, but I was taught to tell the truth, even if it hurts.

As for the Mac club - there are many fine people there being productive with their Macs, who asked intelligent questions, who were proud to be Mac users and yet were unthreatened when I mentioned that I was the VP of the Atari club - we're even talking about keeping a running dialogue between the two clubs. Indeed, the very antithesis of TIFKAS :) I'm not surprised, for the Mac truly is a wonderful little platform, and I'd hate to see it get crushed by Bill Gates (although what with the recent news on the defeat Microsoft faced when the judge threw out three of their motions - including limiting the time Bill has to be grilled by government lawyers. Bill Gates squirming after endless hours of testimony - I've been waiting years for this :))

>Beating a dead horse here.

the horse is quite alive, kicking, and ready to run the Kentucky Derby - in fact it's a Clydesdale. See my post on the non-availability of the USB Iomega ZIP until January 1999 - which I got straight from the horse's mouth tonight, ironically enough.

The only thing dead here is YOU. From the neck up. (Insert your favorite image from "Death Becomes Her" here).

You often sneered in the past that anything that was coming but was still in development for the Atari platform was "vapour" and couldn't be admitted as evidence. I'm only sticking to your yardstick here TIFKAS, and there will be no double standards on your part. And if you don;t like it, TOUGH. (BTW, what about CorelDraw 8 for Mac :))

Isn't DAT backwards compatible with cassettes? In any case, I was disappointed when my new stereo system didn't come with an 8-track player. I'm sure they could have added one for about $25 but the bastards ripped me off and now I have to spend twice that to add one to my system.

Sarcasm aside, the challenge is to only add features that your customers are willing to pay for. Presumably, customers will not pay for things that they find completely useless. Floppies, for me, are completely useless (except on my PC where I need floppies for boot purposes). I am arguing that floppies are useless for most people because they are slow, unreliable and don't have very much storage capacity.

> Macs.

Yes the 'up to twice as fast' quote is pretty misleading. The PowerPC
chip itself, mhz per mhz, is faster then a pentium II, was basically what
I was trying to say. This is why I don't think people should compare the
iMac to some lowend P233MMX system. It should be compared to Pentium II
systems instead.

PC's now have faster bus speeds. I am typing on a machine that I set the
bus speed to 83mhz instead of 66mhz. But all the G3 macs are either 66mhz
or 83mhz, so they aren't that slow anymore. I think your thinking of back
when they had 40 and 50mhz bus's.

Plus also remember that they have that backside cache (512K or 1meg) that
runs at half the processor speed. This is another reason not to compare
them to sockey 7 pentium systems.

Design wise they aren't slow anymore. They stand up just fine to Pentium
II systems that cost more.

Its that damn MacOS that slows the thing down. If you could see a G3
running linux you'd really see how fast these machines were.

>

>

Sniff....I own one of these cards...;-)

For 2d stuff they really aren't that bad (remember its designed to be a low cost chipset $20 in order of a 1000). I can't tell the difference in 2d speed between a rage pro and a matrox millenium 2 or the new G200.

For 3d stuff, I'd use 3dfx on either a mac or a PC. But I have seen Quake running in software. The G3 is fast enough that even in software at 800x600 your pushing over 30fps so its fine.

>Isn't DAT backwards compatible with cassettes?

actually, it isn't - for one thing, the cassettes are different sizes. Also, DAT is a digital format, cassette tape is an analog one. Philips did attempt a digital version of the cassette which was backwards compatible with the original format (I've got a Dire Straits tour program that shows Mark Knopfler posing with one of the new machines), but it was rejected out of hand along with Sony's MiniDisc format by consumers who saw it as just another new format, another cash grab by the music industry.

As someone who is slowly going back his hobby of recording, with the goal of releasing my own CD, I know this for a fact, as DAT is a very popular standard in the music industry for mixdown. (Of course, now that Anodyne Software has now come out with cost-effective CD-ROM burner software for the Atari, I can probably do my mixdown right into the Falcon. Now if only CD-ROM burners would come down in price :))

OTOH, if you're in a job that requires you to shuttle work projects to and fro from your home, a floppy disk suddenly becomes a necessity that the consumer needs. (Yeah, I know, standard disclaimer, then the iMac isn't for them, buy a G3 system).

What I find funny is that the new student Mac (which I saw at my brother's work at York University, reminsicent of a beige iMac) has

both a standard floppy drive AND a ZIP drive. Apple says one of its markets for the iMac is students and education - if the floppy is REALLY dead (and I doubt it, as the stores here still sell floppies by the truckload), why is Apple still putting floppies on computers for college kids? (Come to think of it, why didn't Apple put a ZIP drive as standard on the iMac? Now that it's been confirmed that it'll be over four months before a USB-compatible ZIP comes out, Apple has really shot themselves in the foot over this one)

It might be twice as fast as a Celeron chip, but I doubt it's
twice as fast as a PII/233, and this is coming from a Mac advocate. Let's
no confuse marketing talk to real life performance. The iMac is going to
be a fast machine, yes, but it's not a speed demon by any means. I just
wonder if it's going to be possible to clockchip iMacs, like it's possible
with PowerMac G3s, by adjusting a couple of jumpers on the motherboard.

Unfortunately, it is. It's a very, VERY lame chipset. Bottom of
the barrel, really. Apple should've used something better, even a 3dfx
chip.

ZIPs are not the only thing out there for backing up, you know.
Apart from the Superdrive, another company, whose name I forgot, is going
to release a regular 1.44 floppy for the USB port.

>

I'm not TIFKAS (and don't want to be), but I think this subject is
of little relevance, as you'll notice, as the iMac launch happens and
sales abound.

>

>

Apart from that, from the word go, there'll be USB-to-ADB and
USB-to-SCSI adaptors.
What strikes me is the fact that you fail to see the "big picture".
The iMac is not for you. Not for the user with heaps of hardware, bought
over the years. It's a brand new system. Macs in 1984 used 3.5" floppies,
and they were damn hard to find back then, the same 3.5" floppies that you
now want included. Man, it's been what, 14 years? Do you _REALLY_ think
it's necessary? Better, more modern solutions exist. Apple didn't want to
stick to one of the many up and coming standards, so they left it to the
user to decide.
What I mean is that standards are there to be improved. If you're

happy with old standards, I'd say you should stick to your ATARI. I don't want to be using the same old cranky parallel port, or the same old slow serial ports of today, very limited in scope and useability. USB is a "Good Thing". :)
The majority of the complains you see about the iMac come from experienced users. Those are used to the current standards, which won't be supported on the iMac. But I wonder what will be their position a couple of months from now, when a couple more USB devices will be out the door, and running nice on the iMac... And if you doubt that'll happen, well, all I can say is, wait and see...

You can run MacOS 8 (and 8.5 too) just fine with 32mb RAM and VM/RD on. You'll only _NEED_ 64mb if you need to open several "fat" programs at once (I constantly need to use Photoshop, Netscape, IE, Claris Homepage and GoLive Cyberstudio, all opened at once). Yer average Joe Consumer does not need to run that sort of programs, specially simultaneously.
I know what I'm saying because I had a 32mb machine for about a year, only getting my 64mb G3 a couple of months ago.

Well, the fact that the user won't be able to upgrade the RAM
him/herself is stupid. Reminds me of 1984. I wonder what kind of screws
the iMac will use... Am I going to need a special screwdriver to open it
too? :)
I understand this problem, and it's a major, MAJOR fuckup.

> the pattern for any Apple product.

I disagree. You should read another message I wrote a few minutes
ago. The iMac is all about upcoming standards. There's no use in including
an outdated standard, when better stuff is available.
Apple only mentioned the home market as their target so far, but
I see something much bigger coming... Schools, university labs. The
perfect net computer? I guess so...
You really should've skipped the "fanboy" part, since it's
utterly stupid. Plenty of Wintel people are endorsing the iMac, it is a
viable machine. Just give it some time.

I use floppies quite often. Virtually everyone has a 3.5" floppy drive in
their computer. That is wonderful in terms of compatability. I need to bring
something to a PC... I can format a floppy for PC use. How long does
reformatting a Zip Disk take? (PC format with a Mac) Is that really worth it
for a 1MB file?

Since floppies are very cheap, I don't have to worry if one breaks. (I think
that I have run across three damaged floppies in the past 5 years.) I just
retrieve an data I can from it, and throw it out! I'd think twice about
throwing a $15 Zip Disk out.

Something that would be nice though.... If the iMac had an option to replace
the CD-ROM drive with a re-writable drive.

John G.

I shuttle work almost every day. I use a Zip disks because putting 70MB of
source code on floppies would be a little bit tedious. If I need a file from
work or need to send something to the office, I just dial into the LAN.

Couldn't say. Engineering momentum? Also, the cost of this Mac may be higher
than that of the iMac.

(Come to think of it, why didn't Apple put a ZIP drive as
> standard on the iMac? Now that it's been confirmed that it'll be over
> four months before a USB-compatible ZIP comes out, Apple has really
> shot themselves in the foot over this one)

I think that Apple should have offered the Zip drive as an option.

> Yes the 'up to twice as fast' quote is pretty misleading.

Not at all, "up to twice as fast" is semantically equivalent to "no more than twice as fast as." So it could be half as fast as the Pentium and the statement would still be true.

> The PowerPC
> chip itself, mhz per mhz, is faster then a pentium II, was basically what

> or 83mhz, so they aren't that slow anymore. I think your thinking of back
> when they had 40 and 50mhz bus's.

The PII-400 computers use 100MHz buses.

> Plus also remember that they have that backside cache (512K or 1meg) that
> runs at half the processor speed. This is another reason not to compare
> them to sockey 7 pentium systems.

That won't help the Mac when processing large data sets but I agree that the G3 Macs are probably faster when their memory systems are not strained.

> Design wise they aren't slow anymore. They stand up just fine to Pentium
> II systems that cost more.

No they don't stand up to PII systems. They have slow buses and no AGP. You can't get the high quality video, sound, SCSI, etc. cards that are available for the PC.

> Its that damn MacOS that slows the thing down. If you could see a G3
> running linux you'd really see how fast these machines were.

Yes the Mac OS is slow. Running Linux won't get you a fast video card or a good sound card though.

> Sniff....I own one of these cards...;-)

I get over 50fps on my PII-400 without a 3dfx card. And, BTW, there is only
one manufacturer of Voodoo 2 cards for the Mac and they charge over 50% more
than the PC cards sell for. I know, I just ordered one from MacZone.

We tried the 'running dialogue' thing here in Calgary - the problem is that most of the 'user groups' seem to have disappeared into the woodwork - including the two Atari groups

Do you know - in passing - is the MagicMac Atari emulator available in N America yet that will work with OS8 - and if so - where do we buy it ???????????

Then why not give the users the choice of installing an ethernet card, a CD-
ROM or a modem?
Seriosuly, floppy drives (at least the PC kind) are ridiculously cheap when
bought in bulk by computer manufacturers. Why force the consumer to waste more
money on something which wouldn't have cost them many extra crowns if already
installed in their iMacs?

S'OK, the comparison was expected. However there are significant
differences. 8-tracks never had the following of cassettes (or
floppy disks). They weren't as useable, for the most part they were
read only (although there were recorders). And most important, if you
think back on the period, almost all manufactureres phased out the
8-track by including it along with the other options. I'm referring
to something that is in _widespread_ use, with significant utility.
I'm not asking Apple to include device drivers and mechanisms for
paper tape, punched cards or cassettes, after all.

Totally disregarding the fact that part of the reason that they don't
have much storage capacity (relatively) is due to Apple and Microsoft
foisting such bloated applications on the world, they are, indeed,
sufficient for the majority of people - I see it every day at work. I
use them every day at work, and many others do as well.

>utility would the floppy have for me? None.

Actually, I've never disagreed with that. From the sound of it, it
will work fine for you. I just disagree with the mass appeal that the
concept will have. I know for a fact that too many people use
floppies.

[snipped]

>1) Less than 5% of my hard drive is used by applications. The rest is for data
>so "bloated" applications aren't adding much to my storage requirements.

That is a valid point, however, so is mine. The applications
themselves, when used by people that know just enough to be dangerous,
generate gargantuan data files. Here is an example of a situation I
straightened out last year:

A department handles all of the outgoing shipments that are not
related to our finished product. They use, at various times,
three forms:
a - Packing Slip (100%)
b - Shipping notice (maybe 1 in 15 times)
c - Bill of lading (maybe 1 in 25 times)
Total unique text on these three forms is approximately 2000
bytes, most of which is on the bill of lading, which is rarely
used.

They were using Excel as a forms generator - Basically, they were
putting in dates, charge codes, quantity, item identification and
authorizer - somewhere in the range of about 120 bytes worth of
information. This workbook contained worksheets for all three
forms, an address book that they started, but only got around to
adding about 30 names to, a scanned company logo and a scanned
signature. Both monochrome images, destined for a monochrome
printer, were scanned in color then imported into Excel on all
three sheets, and then reduced to the proper size. The images
were then saved with the workbook. Total file size was 362
kilobytes.

They then took this basic workbook and duplicated it, changing
nothing but the vendor name and address and the filename, for each
vendor that they shipped to. They ended up having 1,178 files.

Almost half-a-gigabyte (362 * 1024 * 1178 = 436,670,464 bytes).
All of this for 3K worth of text, two <4K (scanned in mono,
clipped, reduced & saved compressed) images and maybe a 40K
address file. It could have been worse though, since we have
close to ten thousand activwe vendors at my mill.

>
>2) What bloated applications does Apple ship or foist us with?

I don't need to answer this, just look at your own hard disk. I'm not
referring specifically to Apple or Microsoft applications software
(although they're guilty) but of the software that the operating
systems have engendered. Think for a while what a spreadsheet (for
example) is supposed to do, and how large such a program should be.
Then look at the size of your spreadsheet, all of its resource and
auxilliary files, help files, and everything else it needs to run and
see what the comparison is.

The reason that they did something as foolish as I mentioned above is
because they could. They saw that Excel was trying to be a
spreadsheet, word processor, graphics program, data-base, programming
language, multimedia display system and everything else. Of course,
then you go over to the word processor, and find that it tries to be
all of those things too... just with a little more emphasis on the
word-processing aspect. I could go on, but I won't.

>3) Your data requirements are pretty light. I need about 70MB just to transfer
>my source code to work. Even a typical (1024x768x3) uncompressed screen snap
>won't fit on a floppy.

My data requirements vary. I don't use drive my Winnebago to the
corner to pick up a package of cigarettes, I walk. I do, however, use
it to go camping.
>
>4) Why don't you use your LAN at work for data exchange?
I do use my LAN at work, all the time. I also find numerous uses for
floppies.

I agree. However, the discussion was whether or not people use
floppies, not whether there were more efficient ways of accomplishing
a specific task. No matter how poor (or overly-complicated, though
sophisticated) the the LAN design is, or how stupid the management
policies are, the fact remains that they apply to 1,200 people in my
mill alone, so people have to find alternate procedures. And,
all-things-considered, it is _highly_ unlikely that my mill is unique,
or even an exception. Also, those were just a couple of examples I
tossed off before heading to work, there are plenty more.

Most software is available in Win 3.1 versions as well, which isn't very
surprising, with many corporate and home users still running Windows 3,
perhaps even more than those running MacOS.
Besides, how can MacOS have inflated eightfold within one version number?

>As for OS8 being current. Yes, it is. You can't get a more current OS for
>Mac. Maybe what you're thinking is a "modern" OS. Pre-emptive multitasking?
> Considering that the MacOS's biggest OS rival is Win95/98, then it should be
>compared to that...

Now, aren't we setting our standards a tad low?
It must be said that Windows has got some kind of multitasking nowadays,
though, a more advanced kind than that of the Mac.

>I don't know if Win95/98 supports pre-emptive multitasking or not. But it
>certainly crashes more often than MacOS 8 does. I have a friend that works
>for a software company. He says that his PC crashes roughly once every two
>hours. He also has a PowerMac 8500 that has been running for about two
>months without a single problem.

Both platforms crash for me. So does my Amiga and so does Atari. None is
particularly reliable. You just have to make sure to save your work regularly,
or you will be sorry one day. No system is infallible.

>As for your comment about the MacOS not even qualifying to be considered an
>OS... That's absurd. Without it, the machine would NOT operate. That alone
>means that it is an operating system. An operating system can be as simple
>as MS-DOS (even simpler, I suppose). But in the current day of the GUI, 8MB
>of RAM is a relatively low requirement for an OS.

I run a computer with a GUI, but my total memory doesn't even amount to 8 MB.
There are many definitions of an OS, and according to many, MacOS or MS-DOS
doesn't qualify as an OS.

Ethernet is quie useless for information exchange, unless you happen to be
hooked up via ethernet to every computer you need to share files with.
Ethernet is useful in a LAN environment, but how many of these first-time
buyers which are the supposed market for the iMac have LANs at home?

>> That is quite a lot for an operating system, even in our days of cheap RAM.

I always carry at least one floppy, and the amount of floppies in the computer
facilities is a sure sign that many others find them useful.
Text files are very small, and I often have several on my disks for printout
and editing at school. When I visit friends, I bring files on floppies, and
they do the same when they visit me.
I do not have any LAN to dial into.
A floppy drive is such a basic peripheral, so I can understand that the Mac
designers forgot to add it in their hurry, we do take it for granted, after

all.

8-track has never been much of a standard. Compact discs, LPs and cassette
tapes have been, though, and still are. The same goes for floppy disks. I
wouldn't cry if the iMac designers left out a 3" floppy drive, but a standard
3,5" floppy drive is standard environment in every computer since 1990.

Quinlan, are you the intended target market for the iMac? Don't you think
first-time users will want to transfer files outside the LAN they are supposed
to have at home?

That's good for you. I put my measly kilobytes of code on DD floppies, since
that's all I and my school have in common.

>> What I find funny is that the new student Mac (which I saw at my

Of course. They should offer some sort of writable medium. Throwing out the
floppy without any replacement is plain silly.

Brian, I understand your position, and respect your comments, but to say that "floppies are completely useless" is equivalent to someone from Manhattan saying that automobiles are completely useless because there are busses and subways. Perhaps you don't need them, in which case the setup is fine, but there is a whole wide world out there where millions of people use floppies.

I've been doing an informal survey at work. The people I've asked range from complete neophytes to the Information Technologies department gurus. Of the ninety-one people I've asked so far, not a single one thinks that Apple is making a wise decision. Keep in mind that these are both PC and Macintosh owners/users. I asked the 91 (so far) how many times they've used a floppy recently, even with the companies sophisticated network, and it broke down like this (only the most recent use was tabulated, and I didn't ask for any indication of how often they actually used them):
Today: 6
This week: 9
This month: 28
Last 3 months: 43
What's a Floppy???: 5

86 out of 91 sure seems to be a pretty high ratio for an item that is "completely useless."

Probably because they expect more people to find those things useful. They
need to keep the CD-ROM for software installation. I would want most the
Ethernet and modem but making them options doesn't seem like a bad idea.

Because floppies are almost completely useless? They will add zero value to
the majority of there customers.

This is where we disagree. I can't remember the last time that I used the floppy drive on my Mac and I have only used the floppy drive on my PC once (you need to use a floppy to install Windows 95). So, if I got an iMac, what utility would the floppy have for me? None.

> Totally disregarding the fact that part of the reason that they don't

> use them every day at work, and many others do as well.

1) Less than 5% of my hard drive is used by applications. The rest is for data so "bloated" applications aren't adding much to my storage requirements.

2) What bloated applications does Apple ship or foist us with?

3) Your data requirements are pretty light. I need about 70MB just to transfer my source code to work. Even a typical (1024x768x3) uncompressed screen snap won't fit on a floppy.

4) Why don't you use your LAN at work for data exchange?

I know that there's a demo of it (albeit in German) at ASH's web site.
As for a US dealer - I know that Systems For Tomorrow is now the official
US dealer for ASH products - perhaps if enough Mac users asked he could
start bringing it in for the US market.

I'm trying to find an older copy myself to run on my Powerbook 140 (I
use it for work and I'd love to use Edith, Cardfile and STraightFax with
it) - has anybody had any experience with it and will it work?

probably due to the fact that this is a newsgroup dedicated to people with Ataris to slug it out with other computer users on why their system is best - a type of debate which is verbotten on the chartered comp.sys.atari.st. Here almost no holds are barred, except perhaps insults against dead relatives :) That's also why forums like comp.sys.mac.advocacy and comp.sys.pc.advocacy exist - to give their users a forum to defend their platform, and to blow off steam - and hopefully to learn about other platforms and what the other guy is using in the process.

Since the iMac is such a hot topic, and there are many concerns about its rather off-beat approach to hooking up peripherals and backup storage, I think it is a most appropriate topic for this forum.

MagiC Mac indeed works well with O/S 8. You'll have to order it from
System Solutions in the UK. They want a written signed order with your
credit card number to make the purchase. Send them an email.

All of those things can be added via USB. The modem comes standard. The
iMac has a built in hardware 56K modem

A local vendor that buys in bulk will be able to sell a peripheral for
the same as apple would be able to.

[Survey snipped]

It's just hard for me to imagine that most people would want a floppy drive.
I look at them as being too slow, low capacity and unreliable. What do the
people at your work use floppies for? Do they have relatively new computers?

For the most part - in the 233 - 400 mHz range. Quite a few things
actually (while granting you that there are many times they can't use
them due to file sizes).
- Transferring files between departments is a major use. Each
department has its own network, and shared drive. Most people
don't want to (or don't know how to) log onto the networks for
other departments (in lots of cases, they simply can't, because
their userid & password won't allow it). They also do not feel
like going into First Class (the email client), finding the email
address of the recipient, and determining how to attach the file.
It's just easier for them to copy the file to a floppy and put it
into an inter-departmental envelope.
- A lot of people bring items in from home, to print on the
companies printers, or perhaps touch up in some software that the
company owns and they don't or simply to show to their friends.
They don't use email, because they don't want the system
administrators/company to know what they're doing (or don't know
how to access their email address at the company from their ISP).
In addition, mail only leaves the site twice a day, so there is no
significant speed increase.
There are many examples, those are just 2 ways they use them.

>
>8 MB of RAM? My OS doesn't take 8 MB out of my hard drive.

If 8MB is more than I want to devote to my OS, then I could always install System 7.1 on my Mac. It takes up a little over 1MB of RAM, and will fit onto a floppy disk. And all of my software will still work. (Try downgrading from Win95 to Window 3.1, and see what happens)

As for OS8 being current. Yes, it is. You can't get a more current OS for Mac. Maybe what you're thinking is a "modern" OS. Pre-emptive multitasking? Considering that the MacOS's biggest OS rival is Win95/98, then it should be compared to that...

I don't know if Win95/98 supports pre-emptive multitasking or not. But it certainly crashes more often than MacOS 8 does. I have a friend that works for a software company. He says that his PC crashes roughly once every two hours. He also has a PowerMac 8500 that has been running for about two months without a single problem.

As for your comment about the MacOS not even qualifying to be considered an OS... That's absurd. Without it, the machine would NOT operate. That alone means that it is an operating system. An operating system can be as simple as MS-DOS (even simpler, I suppose). But in the current day of the GUI, 8MB of RAM is a relatively low requirement for an OS.

Hi. I am a Mac guy. I like the Mac. But I don't know anything about Atari computers. I'd LOVE to know all about them. That is why I came to this newsgroup. :)

John G.

Nope. Compare it to a good operating system instead. IRIX, Solaris or linux
for example.

You experience is the opposite of mine. Even the most trivial of application
bugs can crash the Mac OS but Windows 95 offers you some degree of protection.

Your definition of an operating system is very different from the one
presented in most software texts. Is the software on your coffee machine an
operating system? By your definition it would be because your coffee machine
wouldn't operate without it. Still, the Mac OS is, by definition, an
operating system using either the "extended machine" or "resoure manager"
definitions.

I'm sure that Apple would be happy if only few million people found the iMac appealing. The have other products for those who don't.

How do you prevent this?

[Example snipped]

What application software has Apple written that makes then guilty? And how have Microsoft and Apple's operating systems "engendered" "bloated" software?

You probably have a point that I don't see...

So what are you arguing for? Component software architectures? Less capable software?

That wasn't my point. Perhaps it's a good idea though. At least until
the consumer can get some software that isn't going to cause their
computer to lock up mysteriously, crash at least twice a day
(regularly scheduled crashes... now there's a truely unique offering),
and make your 333 megahertz Pentium II run about as fast as a 286 in a
brownout.

In simple electonics terms... My coffeemaker operates by a flipping a switch.
The switch completes an electrical circuit which makes it operate. There is no
"software".
